Further Adventures of the Celestial Sleuth Donald W. Olson, 2018-01-31 From the author of *Celestial Sleuth* 2014 yet more mysteries in art history and literature are solved by calculating phases of the Moon determining the positions of the planets and stars and identifying celestial objects in paintings In addition to helping to crack difficult cases these studies spark our imagination and provide a better understanding of the skies Weather archives vintage maps tides historical letters and diaries military records and the assistance of experts in related fields help with this work For each historical event influenced by astronomy there is a different kind of mystery to be solved How did the changing tides affect an army's battle plans How did the phases of the moon affect how an artist painted a landscape Follow these exciting investigations with a master celestial sleuth as he tracks down the truth and helps unravel mysteries as far back as the Middle Ages and as recent as the iconic 1945 photograph of a kiss in Times Square on VJ Day Topics or cases pursued were chosen for their wide public recognition and intrigue and involve artists such as Vincent van Gogh and Claude Monet historical events such as the campaigns of Braveheart in Scotland and battles in World War II and the Korean War and literary authors such as Chaucer Cervantes Shakespeare Byron and Edgar Allan Poe *Halley's Comet*, 1984 *The New York Times Guide to the Return of Halley's Comet* Richard Flaste, Walter Sullivan, Holcomb B. Noble, John N. Wilford, 1985 *Introduction to Comets* John C. Brandt, Robert D. Chapman, 2004-03-11 We have now reached an exciting time in cometary research With several missions launched or about to be launched in the near future cometary research is rapidly being driven forward This book describes the wealth of information known prior to the return of Halley's comet and the new information discovered since then It presents material on important background topics including observational techniques plasma physics celestial mechanics the solar wind and cosmogony The science of comets is described in order of its discovery from tail phenomena to coma morphology through to the most recent findings from space missions The relationship between comets and asteroids is discussed and future space missions to investigate comets are described This comprehensive text is a complete and up to date treatment of the subject suitable for graduate and advanced undergraduate students of astronomy and planetary science Ferocious Minds Damien Broderick, 2005-01-01 Two centuries ago the first Enlightenment failed when its dream of reason smashed into the passions and fury of stubborn humans Without a deep broad understanding of the world the emerging Enlightenment was left floundering its best impulses perverted into the bloody excess of the French Revolution

Arguably its idealism and noble goals led directly and shockingly to the 20th century's totalitarian nightmares. Now the 21st century is learning anew the Faustian hunger to know everything that can be known. But Enlightenment values of reason and tolerance enriched by new knowledge face a complex world no less eager to embrace medieval terrorism and ancient superstitions, a world bizarrely denying itself many of the fresh opportunities and insights availed by science. Can we find cures for poverty, unhappiness, ignorance, the ruination of the planet, aging, and perhaps for death itself? If so, should we?

Damien Broderick's own ferocious mind invites you to explore today's unexpected treasure house of understanding and provides enticing glimpses of tomorrow's.

Gilbert Sorrentino William McPherson, 1991. The trajectory of Gilbert Sorrentino's literary life can be tracked in this bibliography from his first short story in a 1956 issue of his college literary magazine through his involvement with the New York publishing scene in the 1960s and 1970s and finally into the 1980s and early 1990 when his work as at the beginning once again is being published by small presses. The bibliography treats writings both by and about Sorrentino uniting in one volume exhaustive descriptive analyses of primary works with annotated treatment of secondary sources. It thereby serves the needs not only of scholars and collectors interested in the physical production of Sorrentino's books but also of literary critics concerned with matters of reception and interpretation.

The A to Z of Postmodernist Literature and Theater Fran Mason, 2009-07-23. Postmodernist literature embraces a wide range of forms and perspectives including texts that are primarily self-reflexive texts that use pastiche, burlesque, parody, intertextuality, and hybrid forms to create textual realities that either run in opposition to or in parallel with an external reality, fabrications that develop both of these strategies, texts that ironize their relationship to reality, works that use the aspects already noted to more fully engage with political or cultural realities, texts that deal with history as a fiction, and texts that elude categorization even within the variety already explored. For example, in fiction a postmodernist novel might tell a story about a writer struggling with writing, only perhaps to find that he is a character in a book by another writer struggling to write a book. **The A to Z of Postmodernist Literature and Theater** examines the different areas of postmodernist literature and the variety of forms that have been produced. This is accomplished through a chronology, an introductory essay, a bibliography, and several hundred cross-referenced dictionary entries on individual postmodernist writers, the important postmodernist aesthetic practices, significant texts produced throughout the history of postmodernist writing, and important movements and ideas that have created a variety of literary approaches within the form. By placing these concerns within the historical, philosophical, and cultural contexts of postmodernism, this reference explores the frameworks within which postmodernist literature of the late twentieth and early twenty-first century operates.

Science Fact and Science Fiction Brian Stableford, 2006-09-06 Science fiction is a literary genre based on scientific speculation Works of science fiction use the ideas and the vocabulary of all sciences to create valid narratives that explore the future effects of science on events and human beings Science Fact and Science Fiction examines in one volume how science has propelled science fiction and to a lesser extent how science fiction has influenced the sciences Although coverage will discuss the science behind the fiction from the Classical Age to the present focus is naturally on the 19th century to the present when the Industrial Revolution and spectacular progress in science and technology triggered an influx of science fiction works speculating on the future As scientific developments alter expectations for the future the literature absorbs uses and adapts such contextual visions The goal of the Encyclopedia is not to present a catalog of sciences and their application in literary fiction but rather to study the ongoing flow and counterflow of influences including how fictional representations of science affect how we view its practice and disciplines Although the main focus is on literature other forms of science fiction including film and video games are explored and because science is an international matter works from non English speaking countries are discussed as needed **Princeton Alumni Weekly** Jesse Lynch Williams, Edwin Mark Norris, 1994

New York Magazine, 1994-10-17 New York magazine was born in 1968 after a run as an insert of the New York Herald Tribune and quickly made a place for itself as the trusted resource for readers across the country With award winning writing and photography covering everything from politics and food to theater and fashion the magazine's consistent mission has been to reflect back to its audience the energy and excitement of the city itself while celebrating New York as both a place and an idea **Transrealist Fiction** Damien Broderick, 2000-06-30 Transrealist writing treats

immediate perceptions in a fantastic way according to science fiction writer and mathematician Rudy Rucker who originated the term In the expanded sense argued in this book it also intensifies imaginative fiction by writing the fantastic from the standpoint of richly personalized experience Transrealism is also related to slipstream writing another category introduced into studies of speculative fiction to account for texts that seem to follow trajectories mapped by the huge body of science fiction accumulated in the last century while retaining a central interest in traditional literary strategies This book examines a variety of work from the transrealist perspective something that has not been done previously It emphasizes the texts of Philip K Dick and Rucker himself while it additionally engages the texts of such slipstream writers as Kurt Vonnegut J G Ballard and John Barth It places its argument against the antihumanist trend in science fiction and builds comparisons with more traditional varieties of science fiction works **Halley's Comet, 1755-1984**, 1985-03-27 Product information not available
