## **The Future Of Planning:**

*The Future of Planning* Rydin, Yvonne, 2013-09-11 For the past half century the planning system has operated on the basis of a growth dependence paradigm. It has been based on market led urban development and has sought to provide community benefits from a share of development profits. However we do not live in a world where growth can be taken for granted and we are more aware than previously of the implications for well being and sustainability. This timely book provides a fresh analysis of the limitations of the growth dependence planning paradigm. It considers alternative urban development models, ways of protecting and enhancing existing low value land uses and means of managing community assets within the built environment. In each case it spells out the role that a reformed planning system could play in establishing a new agenda for planning. The book will be of relevance to planning students, planning professionals and planning academics as well as urban policy specialists more generally. *A Future for Planning* Michael Harris, 2019-04-25 As well as being spatial planning is necessarily also about the future and yet time has been relatively neglected in the academic practice and policy literature on planning. Time in particular the need for longer term thinking is critical to responding effectively to a range of pressing societal challenges from climate change to an ageing population, poor urban health to sustainable economic development. This makes the relative neglect of time not only a matter of theoretical importance but also increasing practical and political significance. *A Future for Planning* is an accessible wide ranging book that considers how planning practice and policy have been constrained by short termism as well as by a familiar lack of spatial thinking in policy in response to major social economic and environmental challenges. It suggests that failures in planning often represent failures to anticipate and shape the future which go well beyond planning systems and practices rather our failure to plan for the longer term relates to wider issues in policy making and governance. This book traces the rise and fall of long term planning over the past 80 years or so but also sets out how planning can take responsibility for twenty first century challenges. It provides examples of successes and failures of longer term planning from around the world. In short the book argues that we need to put time back into planning and develop forms of planning which serve to promote the sustainability and wellbeing of future generations. Or differently put is sustainability really as desirable and possible as its proponents in urban planning and other related fields like economics, political science, environmental studies, architecture and so on would like us to believe? Contrary to the conventional wisdom held by many since the modern era the concern with sustainability has been much exaggerated and distorted to the point that it is fast

becoming a new intellectual fad so that its dark sides have been unwarrantedly ignored or downgraded This is not to say however that the literature on sustainability in urban planning and other related fields hitherto existing in history has been full of nonsense Indeed on the contrary much can be learned from different theoretical approaches in the literature The important point to remember here however is that this book provides an alternative better way to understand the nature of sustainability in urban planning and other related fields which learns from different sides of the debate but in the end transcends them all The urgency of this inquiry should not be underestimated as it concerns not only urban planning as a case study here but also other highly related yet very serious challenges in our time e g ecological economic demographic technological moral spiritual political and the like Therefore if true this seminal view will fundamentally change the way that we think about the issue of sustainability with its enormous implications not only for understanding the future of urban planning in a small sense but also for predicting the relevance of sustainability in relation to the entire domain of human knowledge for the human future and what I originally called its post human fate in a broad sense
