Situated Learning Jean Lave, Etienne Wenger, 1991-09-27 In this important theoretical treatise Jean Lave anthropologist and Etienne Wenger computer scientist push forward the notion of situated learning that learning is fundamentally a social process The authors maintain that learning viewed as situated activity has as its central defining characteristic a process they call legitimate peripheral participation LPP Learners participate in communities of practitioners moving toward full participation in the sociocultural practices of a community LPP provides a way to speak about crucial relations between newcomers and old timers and about their activities identities artefacts knowledge and practice The communities discussed in the book are midwives tailors quartermasters butchers and recovering alcoholics however the process by which participants in those communities learn can be generalised to other social groups

An Analysis of Jean Lave and Etienne Wenger's Situated Learning Charmi Patel, 2018-02-21 Social anthropologist Jean Lave and computer scientist Etienne Wenger's seminal *Situated Learning* helped change the fields of cognitive science and pedagogy by approaching learning from a novel angle Traditionally theories of learning and education had focused on processes of cognition the mental processes of knowledge formation that occur within an individual Lave and Wenger chose to look at learning not as an individual process but a social one As so often with the creative thinking process a small simple shift in emphasis was all that was required to show things in an entirely different light What *Situated Learning* illustrated and emphasized was that learning is dependent on its social situation Even though the most effective way to learn is through interaction with experts and peers in a community organized around a common interest the traditional cognitive learning model failed to account for the way in which learners interact with their community of practice The new hypothesis that Lave and Wenger developed was that learning can be seen as a continuously evolving set of relationships situated within a social context This allowed Lave and Wenger to place discussions of apprenticeship and workplace learning on a new footing and led in turn to the book's impressive impact in business and management scholarship

Kafai,2012-10-12 More than a decade has passed since the First International Conference of the Learning Sciences ICLS was held at Northwestern University in 1991 The conference has now become an established place for researchers to gather The 2004 meeting is the first under the official sponsorship of the International Society of the Learning Sciences ISLS The theme

of this conference is Embracing Diversity in the Learning Sciences As a field the learning sciences have always drawn from a diverse set of disciplines to study learning in an array of settings Psychology cognitive science anthropology and artificial intelligence have all contributed to the development of methodologies to study learning in schools museums and organizations As the field grows however it increasingly recognizes the challenges to studying and changing learning environments across levels in complex social systems This demands attention to new kinds of diversity in who what and how we study and to the issues raised to develop coherent accounts of how learning occurs Ranging from schools to families and across all levels of formal schooling from pre school through higher education this ideology can be supported in a multitude of social contexts The papers in these conference proceedings respond to the call *Networks of Mind: Learning, Culture, Neuroscience* Kathy Hall, Alicia Curtin, Vanessa Rutherford, 2013-12-13 This ground breaking book is unique in bringing together two perspectives on learning sociocultural theory and neuroscience Drawing on both perspectives it foregrounds important developments in our understanding of what learning is where and how learning occurs and what we can do to understand learning as an everyday process Leading experts from both disciplines demonstrate how sociocultural ideas such as the relevance of experience opportunity to learn environment personal histories meaning participation memory and feelings of belonging align with and reflect upon new understandings emerging from neuroscience concerning plasticity and neural networks Among the themes critically examined are the following Mind and brain Culture Ability and talent Success and failure Memory Language Emotion Aimed at and accessible to a broad audience and drawing on both schools of thought *Networks of Mind* employs case studies vignettes and real life examples to demonstrate that though the language of sociocultural theory and that of neuroscience appear very different ultimately the concepts of both perspectives align and converge around some key ideas The book shows where both perspectives overlap collide and diverge in their assumptions and understanding of fundamental aspects of human flourishing It shows how neuroscience confirms some of the key messages already well established by sociocultural theory specifically the importance of opportunity to learn It also argues that the ascendancy of neuroscience may result in the marginalization of sociocultural science though the latter it argues has enormous explanatory power for understanding and promoting learning and for understanding how learning is afforded and constrained

The SimCalc Vision and Contributions Stephen J. Hegedus, Jeremy Roschelle, 2012-12-16 This volume provides essential guidance for transforming mathematics learning in schools through the use of innovative technology pedagogy and curriculum. It presents clear, rigorous evidence of the impact technology can have in improving students' learning of important yet complex mathematical concepts and goes beyond a focus on technology alone to clearly explain how teacher professional development, pedagogy, curriculum, and student participation and identity each play an essential role in transforming mathematics classrooms with technology. Further evidence of effectiveness is complemented by insightful case studies of how key factors lead to enhancing learning, including the contributions of design research, classroom discourse, and meaningful assessment. The volume organizes over 15 years of sustained research by multiple investigators in different states and countries who together developed an approach called SimCalc that radically transforms how Algebra and Calculus are taught. The SimCalc program engages students around simulated motions such as races on a soccer field and builds understanding using visual representations such as graphs and familiar representations such as stories to help students to develop meaning for more abstract mathematical symbols. Further, the SimCalc program leverages classroom wireless networks to increase participation by all students in doing, talking about, and reflecting on mathematics. Unlike many technology programs, SimCalc research shows the benefits of balanced attention to curriculum, pedagogy, teacher professional development, assessment, and technology and has proven effectiveness results at the scale of hundreds of schools and classrooms. Combining the findings of multiple investigators in one accessible volume reveals the depth and breadth of the research program and engages readers interested in: Engaging students in deeply learning the important concepts in mathematics; Designing innovative curriculum, software, and professional development; Effective uses of technology to improve mathematics education; Creating integrated systems of teaching that transform mathematics classrooms; Scaling up new pedagogies to hundreds of schools and classrooms; Conducting research that really matters for the future of mathematics learning.
