Kitchin,2012-12-06 I hope that people all around the world never forget what a wonderful thing it is to lie on your back and look up at the stars Pete Seeger What is the fascination that constellations hold for people There are probably as many different answers to that question as there are people For many though the constella tions are the stepping off point into the fabulous mind bending discoveries and concepts of modern astronomy For others it is their long and intriguing history that beckons For some people the

constellations provide the means for navigation and orientation over the surface of the Earth and of course there are the millions who place some faith in horoscopes. But for most people the patterns in the sky are a beautiful part of their environment to be treasured alongside the forests, fields and rivers that make life worth living. However, just as we are losing our green environment to pollution, so we are losing our sky. The glow from cities across the world swamps the stars in the night sky. Astronomers have had to retreat to remote mountain tops to escape that light pollution. The rest of us must make do with what is available. From the centre of a city or any other brightly lit area, probably no stars at all will be visible even on the clearest of nights. From the suburbs the brighter stars should normally be seen.

*The Oxford Handbook of Light in Archaeology* Costas Papadopoulos, Holley Moyes, 2021-12-09

Light has a fundamental role to play in our perception of the world. Natural or artificial lightscapes orchestrate uses and experiences of space and in turn influence how people construct and negotiate their identities, form social relationships and attribute meaning to material practices. Archaeological practice seeks to analyse the material culture of past societies by examining the interaction between people, things and spaces. As light is a crucial factor that mediates these relationships, understanding its principles and addressing illumination's impact on sensory experience and perception should be a fundamental pursuit in archaeology. However, in archaeological reasoning, studies of lightscapes have remained largely neglected and understudied. This volume provides a comprehensive and accessible consideration of light in archaeology and beyond by including dedicated and fully illustrated chapters covering diverse aspects of illumination in different spatial and temporal contexts from prehistory to the present. Written by leading international scholars, it interrogates the qualities and affordances of light in different contexts and in material environments, explores its manipulation and problematises its elusive properties. The result is a synthesis of invaluable insights into sensory experience and perception, demonstrating illumination's vital impact on social, cultural and artistic contexts.

[Skywatchers of Ancient Mexico](#) Anthony F. Aveni, 1980

Combining as it does the romance of space with the mystery of the past, the study of pre-Columbian skywatchers of the New World has drawn increasing scientific and popular attention in recent years. Aveni, one of the pioneers in this new interdisciplinary field, couples basic astronomy with archaeological and ethnological data to present a readable and entertaining synthesis of what is known of ancient astronomy in this hemisphere.

*A Skywatcher's Year* Jeff Kanipe, 1999-07-08

Have you ever wondered what that bright point of light twinkling near the horizon is or just when you can expect to see the best shooting stars of the year? A Skywatcher's Year has answers to these and other questions about what is visible in the night sky throughout the year. Through 52 articles arranged week by week, A Skywatcher's Year guides you to celestial events and phenomena that occur or are visible with the naked eye and binoculars for each week of the year. It acquaints you not only with up-to-date astronomical information on stars, nebulae, meteors, the Milky Way and galaxies, but also conveys the beauty and wonder of the night sky. Covering both the Northern Hemisphere and Southern Hemisphere, A Skywatcher's Year helps readers find prominent stars.

and constellations bright star clusters nebulae and galaxies and explains how and when to observe prominent annual meteor showers

Telescopes and Techniques C. R. Kitchin, 2012-12-06 The modern aspiring astronomer is faced with a bewildering choice of commercially produced telescopes including all the designs considered in the preceding chapter Yet only four decades ago the choice for a small telescope would have been between just a refractor and a Newtonian reflector That change has come about because of the enormous interest that has grown in astronomy since the start of the space age and with the mind boggling discoveries of the past 30 or 40 years Except for some of the very small instruments which are unfortunately often heavily promoted in general mail order catalogues camera shops and the like the optical quality of these commercially produced telescopes is almost uniformly excellent Although one product may be slightly better for some types of observation or more suited to the personal circumstances of the observer than another most of them will provide excellent observing opportunities The same general praise cannot be applied however to the mountings with which many of these telescopes are provided and those problems are covered in Chapter 6
