Stanford Album:

The Stanford Album Margo Baumgartner Davis, Roxanne Nilan, 1989 The Stanford Album brings together some 600 photographs largely unpublished and an interpretive text to tell the story of the community life of Stanford University from the University's creation in 1885 through the Second World War. It is a fitting coincidence that at the same time Stanford is celebrating its Centennial Years 1985-91 the art of photography has reached its own anniversary of 150 years since the birth of the daguerreotype. The founders of the university Jane and Leland Stanford sat for their wedding portraits in 1850 and these daguerreotypes were just the beginning of the Stanfords' fascination with patronage of the new art form. Leland Stanford's perception of the value of the camera as a medium of documentation resulted in a superb pictorial record of the planning, construction and dedication of the university, some of which is reproduced in *The Stanford Album*. By the turn of the century technical advances in photography made possible the small handheld camera and at Stanford the snapshot image of campus life began to proliferate. Commercial photographers mainly concentrated on athletic events, drama productions, student parades and other campus rituals. Students who owned cameras intruded everywhere with the mysterious little boxes into dormitories, fraternities and sororities, classrooms, dances, picnics and beer busts. The book revisits a bygone Stanford. Through the magic of the camera lens a vanished world of college life comes alive again and we can see the community that existed yesterday under the same arcades where those at Stanford today study work and stroll. Charles L. Weed John H. Turner, 1983 *International Dictionary of University Histories* Mary Elizabeth Devine, Carol Summerfield, 2013-12-02 Modeled on Fitzroy Dearborn's highly successful *International Dictionary of Historic Places* the *International Dictionary of University Histories* provides basic information on 200 institutions, location, description, sources of further information followed by an extensive 3000 to 5000 word essay on each university's history. Entries on each university conclude with a Further Reading list and most entries are illustrated. Coverage is world wide and entries range from the great medieval institutions Oxford, Heidelberg, the Sorbonne to the great historic universities of the United States to the newer universities of Australia and South Africa to the lesser known universities of India, China and Japan. More than 200 writers, researchers and archival departments of the universities themselves have contributed to the Dictionary. Entries include those universities with the most fascinating histories and those that have played important roles in the development of their own countries and in the furtherance of world scholarship. *1906 San Francisco Earthquake Centennial Field Guides* Carol S. Prentice, 2006-01-01 The twenty field trip guides in this volume represent the work of earthquake professionals from the earth science, engineering and emergency management communities. The guides were developed to cross the boundaries between these professions and thus reflect this diversity. Trips focus on the built environment, the effects of the 1906 earthquake, the San Andreas fault and other active faults in northern California. **Letters Home from Stanford: 125 Years of Correspondence from Stanford University Students** Alison Carpenter Davis, 2017-03-15 **Catalogue of the**

Margaret O'Mara,2005 What is the magic formula for turning a place into a high tech capital How can a city or region become a high tech powerhouse like Silicon Valley For over half a century through boom times and bust business leaders and politicians have tried to become the next Silicon Valley but few have succeeded This book examines why high tech development became so economically important late in the twentieth century and why its magic formula of people jobs capital and institutions has been so difficult to replicate Margaret O Mara shows that high tech regions are not simply accidental market creations but cities of knowledge planned communities of scientific production that were shaped and subsidized by the original venture capitalist the Cold War defense complex At the heart of the story is the American research university an institution enriched by Cold War spending and actively engaged in economic development The story of the city of knowledge broadens our understanding of postwar urban history and of the relationship between civil society and the state in late twentieth century America It leads us to further redefine the American suburb as being much more than formless sprawl and shows how it is in fact the ultimate post industrial city Understanding this history and geography is essential to planning for the future of the high tech economy and this book is must reading for anyone interested in building the next Silicon Valley Stanford ,2009 *Catalogue of the Central Lending Department ...* Birmingham Public Libraries.
