Kohlberg's Theory of Moral Reasoning

Kohlberg's Theory of Moral Reasoning is a psychological theory developed by Lawrence Kohlberg, a psychologist and moral philosopher. It is based on the idea that moral reasoning develops in stages, from a self-interest perspective to a more universal perspective.

The Six Stages of Moral Reasoning

The six stages of moral reasoning are divided into three levels of moral development: Pre-conventional, Conventional, and Post-conventional.

Stage One: Obedience and Punishment

The first stage of moral reasoning is based on the idea of obedience and punishment. It is the most basic level of moral reasoning, where the individual is motivated by the desire to avoid punishment or to gain a reward.

Stage Two: Individualism and Exchange

The second stage of moral reasoning is based on the idea of individualism and exchange. It is the level where the individual is motivated by the desire to satisfy their own needs and interests.

Stage Three: Good Interpersonal Relationships

The third stage of moral reasoning is based on the idea of good interpersonal relationships. It is the level where the individual is motivated by the desire to maintain good relationships with others.

Stage Four: Social Order and Authority

The fourth stage of moral reasoning is based on the idea of social order and authority. It is the level where the individual is motivated by the desire to maintain the social order and to follow the rules.

Stage Five: Social Contract and Individual Rights

The fifth stage of moral reasoning is based on the idea of social contract and individual rights. It is the level where the individual is motivated by the desire to maintain the social contract and to protect individual rights.

Stage Six: Universal Principles

The sixth stage of moral reasoning is based on the idea of universal principles. It is the highest level of moral reasoning, where the individual is motivated by the desire to follow universal principles of justice and fairness.
