folds that plunge at low to moderate angles generally north The folds have axial planes parallel to cleavage Clasts in conglomerates were flattened parallel to cleavage and their long axes were aligned north northeastward subparallel to fold axes This extension direction parallels the trend of the Kootenay arc a relation not typical of orogenic belts The dynamothermal metamorphism included coaxial compressive pulses separated by periods of stress relaxation The penetrative deformation could have been accompanied by slip on preexisting faults including a large strike slip component for the roof Stensgar Mountain thrust and floor Lane Mountain thrust thrusts of the duplex fault zone Later movements along these roof and floor thrusts and connecting splays are suggested by nonfolded traces of the faults and the faulted dynamothermally metamorphosed cataclasite adjacent to the Lane Mountain thrust The penetrative deformation that affected the Stensgar Mountain quadrangle also affected the rest of northeastern Washington and southeastern British Columbia it may have been the result of oblique convergence during Mesozoic subduction **The Automobile** ,1905 Automotive Industries ,1906 Vols for 1919 include an Annual statistical issue title varies Bulletin ,1940 Cumulative List of Organizations Described in Section 170 (c) of the Internal Revenue Code of 1954 United States.
