Quadrature Domains and Their Applications Harold S. Shapiro, 2005-01-27 Quadrature domains were singled out about 30 years ago by D Aharonov and H S Shapiro in connection with an extremal problem in function theory Since then a series of coincidental discoveries put this class of planar domains at the center of crossroads of several quite independent mathematical theories e g potential theory Riemann surfaces inverse problems holomorphic partial differential equations fluid mechanics operator theory The volume is devoted to recent advances in the theory of quadrature domains illustrating well the multi facet aspects of their nature The book contains a large collection of open problems pertaining to the general theme of quadrature domains

Limit Operators, Collective Compactness, and the Spectral Theory of Infinite Matrices Simon N. Chandler-Wilde, Marko Lindner, 2011 In the first half of this memoir the authors explore the interrelationships between the abstract theory of limit operators see e g the recent monographs of Rabinovich Roch and Silbermann 2004 and Lindner 2006 and the concepts and results of the generalised collectively compact operator theory introduced by Chandler Wilde and Zhang 2002 They build up to results obtained by

applying this generalised collectively compact operator theory to the set of limit operators of an operator A its operator spectrum In the second half of this memoir the authors study bounded linear operators on the generalised sequence space $\ell_p(\mathbb{Z}, N, U)$ where $p \in [1, \infty)$ and U is some complex Banach space They make what seems to be a more complete study than hitherto of the connections between Fredholmness invertibility invertibility at infinity and invertibility or injectivity of the set of limit operators with some emphasis on the case when the operator A is a locally compact perturbation of the identity Especially they obtain stronger results than previously known for the subtle limiting cases of $p = 1$ and ∞
