Spectroscopy and Structure Organic Structures from Spectra L. D. Field, S. Sternhell, J. R. Kalman, 2012-12-27

The derivation of structural information from spectroscopic data is now an integral part of organic chemistry courses at all Universities. A critical part of any such course is a suitable set of problems to develop the student's understanding of how structures are determined from spectra. *Organic Structures from Spectra* Fifth Edition is a carefully chosen set of more than 280 structural problems employing the major modern spectroscopic techniques: a selection of 27 problems using 2D NMR spectroscopy, more than 20 problems specifically dealing with the interpretation of spin-spin coupling in proton NMR spectra, and 8 problems based on the quantitative analysis of mixtures using proton and carbon NMR spectroscopy. All of the problems are graded to develop and consolidate the student's understanding of organic spectroscopy. The accompanying text is descriptive and only explains the underlying theory at a level which is sufficient to tackle the problems. The text includes condensed tables of characteristic spectral properties covering the frequently encountered functional groups. The examples themselves have been selected to include all important common structural features found in organic compounds and to emphasise connectivity arguments. Many of the compounds were synthesised specifically for this purpose. There are many more easy problems to build confidence and demonstrate basic principles than in other collections. The fifth edition of this popular textbook includes more than 250 new spectra and more than 25 completely new problems. It now incorporates an expanded suite of new problems dealing with the analysis of 2D NMR spectra: COSY, C-H Correlation spectroscopy, HMBC, NOESY, and TOCSY. It has been expanded and updated to reflect the new developments in NMR and to retire older techniques that are no longer in common use. It provides a set of problems dealing specifically with the quantitative analysis of mixtures using NMR spectroscopy. Features: proton NMR spectra obtained at 200, 400, and 600 MHz and ^{13}C NMR spectra include DEPT experiments as well as proton coupled experiments. It contains 6 problems in the style of the experimental section of a research paper and two examples of fully worked solutions. *Organic Structures from Spectra* Fifth Edition will prove invaluable for students of Chemistry, Pharmacy, and Biochemistry taking a first course in Organic Chemistry.

Contents: Preface, Introduction, Ultraviolet Spectroscopy, Infrared Spectroscopy, Mass Spectrometry, Nuclear Magnetic Resonance Spectroscopy, 2D NMR, Problems, Index, Reviews from earlier editions.

Your book is becoming one of the go-to books for teaching structure determination here in the States. Great work! I would definitely state that this book is the most useful aid to basic organic spectroscopy teaching in existence and I would strongly recommend every instructor in this area to use it either as a source of examples or as a class textbook. Magnetic Resonance in Chemistry: Over the past year I have trained many students using problems in your book. They initially find it as a task. But after doing 3-4 problems with all their brains/activities working out

the rest of the problems become a mania They get addicted to the problem solving and every time they solve a problem by themselves their confident level also increases I am teaching the fundamentals of Molecular Spectroscopy and your books represent excellent sources of spectroscopic problems for students Organic Structure Analysis Phillip Crews,Jaime Rodríguez,Marcel Jaspars,2010 Organic Structure Analysis Second Edition is the only text that teaches students how to solve structures as they are solved in actual practice Ideal for advanced undergraduate and graduate courses in organic structure analysis organic structure identification and organic spectroscopy it emphasizes real applications integrating theory as needed and introduces students to the latest spectroscopic methods Book Jacket *Molecular Structure and Spectroscopy. Nonlinear Spectroscopy for Molecular Structure Determination Robert W. Field, 1998 A large variety of nonlinear spectroscopic methods have so far been developed and applied to studies of molecular structure and dynamics Some of these methods utilize complex techniques making it difficult to understand the underlying principles Furthermore most of these methods are referred to by nicknames or acronyms which keeps them shrouded in mystery for most non-specialists who are thereby discouraged from mastering and applying the methods to molecular systems Under these circumstances it was judged appropriate and timely to overview those nonlinear spectroscopic methods which are currently particularly useful for studies of molecular structure and dynamics Thus the Commission on Molecular Structure and Spectroscopy of the International Union of Pure and Applied Chemistry decided to publish a book intended to provide an introduction to nonlinear spectroscopy for non-specialists
