Spectroscopy of Biological Molecules Camille Sandorfy, T. Theophanides, 2012-12-06 This volume contains the proceedings of the NATO Advanced Study Institute on the Spectroscopy of Biological Molecules which took place on July 4 15 1983 in Acquafredda di Maratea Italy The institute concentrated on

three main subjects the structure and dynamics of DNA proteins and visual and plant pigments Its timeliness has been linked to rapid advances in certain spectroscopic techniques which yielded a considerable amount of new information on the structure and interactions of biologically important molecules Among these techniques Fourier transform infrared resonance and surface enhanced Raman spectroscopies Raman microscopy and micro probing time resolved techniques two photon and ultrafast electronic and ^{13}C ^{15}N and ^{31}P NMR spectroscopies and kinetic and static IR difference spectroscopy received a great deal of attention at the Institute In addition an entirely new technique near millimeter wave spectroscopy has been presented and discussed Two introductory quantum chemical lectures one on the structure of water in DNA and another on the energy bands in DNA and proteins set the stage for the experimentally oriented lectures that followed Fundamental knowledge on hydrogen bonding was the topic of two other lectures Panel discussions were held on the structure and conformations of DNA metal DNA adducts and proteins and on visual pigments Many scientists who normally attend different conferences and never meet met at Aquafredda di Maratea We feel that at the end of our Institute a synthetic view emerged on the powerful spectroscopic and theoretical methods which are now available for the study of biological molecules

Modern Vibrational Spectroscopy and Micro-Spectroscopy Max Diem, 2015-06-30 Modern Vibrational Spectroscopy and Micro Spectroscopy Theory Instrumentation and Biomedical Applications unites the theory and background of conventional vibrational spectroscopy with the principles of microspectroscopy It starts with basic theory as it

applies to small molecules and then expands it to include the large biomolecules which are the main topic of the book with an emphasis on practical experiments results analysis and medical and diagnostic applications This book is unique in that it addresses both the parent spectroscopy and the microspectroscopic aspects in one volume Part I covers the basic theory principles and instrumentation of classical vibrational infrared and Raman spectroscopy It is aimed at researchers with a background in chemistry and physics and is presented at the level suitable for first year graduate students The latter half of Part I is devoted to more novel subjects in vibrational spectroscopy such as resonance and non linear Raman effects vibrational optical activity time resolved spectroscopy and computational methods Thus Part 1 represents a short course into modern vibrational spectroscopy Part II is devoted in its entirety to applications of vibrational spectroscopic techniques to biophysical and bio structural research and the more recent extension of vibrational spectroscopy to microscopic data acquisition Vibrational microscopy or microspectroscopy has opened entirely new avenues toward applications in the biomedical sciences and has created new research fields collectively referred to as Spectral Cytopathology SCP and Spectral Histopathology SHP In order to fully exploit the information contained in the micro spectral datasets methods of multivariate analysis need to be employed These methods along with representative results of both SCP and SHP are presented and discussed in detail in Part II
