Expression in Speech Mark Tatham, Katherine Morton, 2003-10-16 This book is about the nature of expression in speech It is a comprehensive exploration of how such expression is produced and understood and of how the emotional content of spoken words may be analysed modelled tested and synthesized Listeners can interpret tone of voice assess emotional pitch and effortlessly detect the finest modulations of speaker attitude yet these processes present almost intractable difficulties to the researchers seeking to identify and understand them In seeking to explain the production and perception of emotive content Mark Tatham and Katherine Morton review the potential of biological and cognitive models They examine how the features that make up the speech production and perception systems have been studied by biologists psychologists and linguists and assess how far biological behavioural and linguistic models generate hypotheses that provide insights into the nature of expressive speech The authors use recent techniques in speech synthesis and automatic speech recognition as a test bed for models of expression in speech Acknowledging that such testing presupposes a comprehensive computational model of speech production they put forward original proposals for its foundations and show how the relevant data structures may be modelled within its framework This pioneering book will be of central interest to researchers in linguistics and in speech science pathology and technology It will also be valuable for behavioural and cognitive scientists wanting to know more about this vital and elusive aspect of human behaviour

An Introduction to the Science of Phonetics Nigel Hewlett, Janet Mackenzie Beck, 2013-04-03 The book is designed as an introduction to the scientific study of speech No prior knowledge of phonetics is assumed As far as mathematical knowledge is concerned all that is assumed is a knowledge of simple arithmetic and as far as possible concepts are dealt with on an intuitive rather than mathematical level The anatomical material is all fully explained and illustrated The book is arranged in four parts Part 1 Basic Principles provides an introduction to established phonetic theory and to the principles of phonetic analysis and description including phonetic transcription Part 2 Acoustic Phonetics considers the physical nature of speech sounds as they pass through the air between

speaker and hearer It includes sections on temporal measurement fundamental frequency spectra and spectrograms Part 3 Auditory Phonetics covers the anatomy of the ear and the perception of loudness pitch and quality The final part Part 4 covers the articulatory production of speech and shows how experimental techniques and tools can enhance our understanding of the complexities of speech production Though the audience for this book is mainly students and professors in the Speech Sciences it will also be valuable to any students studying hearing science and acoustics The book is well supported with figures tables and practice boxes with experiments

Analysing Conversation Beatrice Szczepek Reed, 2017-09-16 Spoken interaction is impossible without prosody Intonation pitch register tempo rhythm pausing loudness and voice quality all contribute to the spontaneous negotiation process that is everyday talk This highly accessible introduction to the prosody and analysis of everyday conversation explains basic concepts and methods of interpretation using a wealth of examples from real life conversations Readers are introduced to the many conversational practices prosody plays a part in through sample analyses all of which are available to listen to as downloadable audio files on the accompanying companion website www.palgrave.com/analysingconversation Packed with authentic examples practical suggestions for analysis suggestions for further reading and a helpful glossary this clear and comprehensive guide is essential reading for students and researchers alike

Linguistic Biomarkers of Neurological, Cognitive, and Psychiatric Disorders: Verification, Analytical Validation, Clinical Validation, and Machine Learning Ratrie Wayland, Si Chen, Kevin Tang, 2024-08-07 Degeneration of nerve cells that control cognitive speech and language processes leading to linguistic impairments at various levels from verbal utterances to individual speech sounds could indicate signs of neurological cognitive and psychiatric disorders such as Alzheimer's disease AD Parkinson's disease PD amyotrophic lateral sclerosis ALS dementias depression autism spectrum disorder schizophrenia etc Currently these disorders are diagnosed using specific clinical diagnostic criteria and neuropsychological examinations However speech based biomarkers could potentially offer many advantages over current clinical standards In addition to being objective and naturalistic they can also be collected remotely with minimal instruction and time requirements Furthermore Machine Learning algorithms developed to build automated diagnostic models using linguistic features extracted from speech could aid diagnosis of patients with probable diseases from a group of normal population To ensure that speech based biomarkers are providing accurate measurement and can serve as effective clinical tools for detecting and monitoring disease speech features extracted and analyzed must be systematically and rigorously evaluated Different machine learning architectures trained to classify different types of disordered speech must also be rigorously tested and systematically compared
