Computer Graphics and Geometric Modeling David Salomon,2012-12-06 Joseph Louis Lagrange 1736 1813 one of the greatest mathematicians of the 18th century made important contributions to the theory of numbers and to analytical and celestial mechanics His most important work is Mecanique Analytique 1788 the textbook on which all subsequent work in this field is based A contemporary reader is surprised to find no diagrams or figures of any kind in this book on mechanics This reflects one extreme approach to graphics namely considering it unimportant or even detracting as a teaching tool and not using it Today of course this approach is unthinkable Graphics especially computer graphics is commonly used in texts advertisements and movies to illustrate concepts to emphasize points being discussed and to entertain Our approach to graphics has been completely reversed since the days of La grange and it seems that much of this change is due to the use of computers Computer graphics today is a mature successful and growing field It is used by many people for many purposes and it is enjoyed by even more people One criterion for the maturity of a field of study is its size When a certain discipline becomes so big that no one person can keep all of it in their head we say that that discipline has matured or has come of age This is what happened to computer graphics in the last decade or so
