Howard Aiken I. Bernard Cohen,2000 Biography of Howard Aiken a major figure of the early digital era by a major historian of science who was also a colleague of Aiken's at Harvard Howard Hathaway Aiken 1900 1973 was a major figure of the early digital era He is best known for his first machine the IBM Automatic Sequence Controlled Calculator or Harvard Mark I conceived in 1937 and put into operation in 1944 But he also made significant contributions to the development of applications for the new machines and to the creation of a university curriculum for computer science This biography of Aiken by a major historian of science who was also a colleague of Aiken's at Harvard offers a clear and often entertaining introduction to Aiken and his times Aiken's Mark I was the most intensely used of the early large scale general purpose automatic digital computers and it had a significant impact on the machines that followed Aiken also proselytized for the computer among scientists scholars and businesspeople and explored novel applications in data processing automatic billing and production control But his most lasting contribution may have been the students who received degrees under him and then took prominent positions in academia and industry I Bernard Cohen argues convincingly for Aiken's significance as a shaper of the computer world in which we now live *NASA Technical Note* ,1967 Progress in Applications of Boolean Functions Tsutomu Sasao,Jon Butler,2022-05-31 This book brings together five topics on the application of Boolean functions They are 1 Equivalence classes of Boolean functions The number of n variable functions is large even for values as small as $n = 6$ and there has been much research on classifying functions There are many classifications each with their own distinct merit 2 Boolean functions for cryptography The process of encrypting decrypting plaintext messages often depends on Boolean functions with specific properties For example highly nonlinear functions are valued because they are less susceptible to linear attacks 3 Boolean differential calculus An operation analogous to taking the derivative of a real valued function offers important insight into the properties of Boolean functions One can determine tests or susceptibility to hazards 4 Reversible logic Most logic functions are irreversible it is impossible to reconstruct the input given the output However Boolean functions that are reversible are necessary for quantum computing and hold significant promise for low power computing 5 Data mining The process of extracting subtle patterns from enormous amounts of data has benefited from the use of a graph based representation of Boolean functions This has use in surveillance fraud detection scientific discovery including bio informatics genetics medicine and education Written by experts these chapters present a tutorial view of new and emerging technologies in Boolean functions Table of Contents Equivalence Classes of Boolean Functions Boolean Functions for Cryptography Boolean Differential Calculus Synthesis of Boolean Functions in Reversible Logic Data Mining

Using Binary Decision Diagrams Completion Detection in Asynchronous Circuits Pallavi Srivastava, 2022-11-08 This book is intended for designers with experience in traditional clocked circuit design seeking information about asynchronous circuit design in order to determine if it would be advantageous to adopt asynchronous methodologies in their next design project. The author introduces a generic approach for implementing a deterministic completion detection scheme for asynchronous bundled data circuits that incorporates a data dependent computational process taking advantage of the average case delay. The author validates the architecture using a barrel shifter as shifting is the basic operation required by all the processors. The generic architecture proposed in this book for a deterministic completion detection scheme for bundled data circuits will facilitate researchers in considering the asynchronous design style for developing digital circuits. One service mathematics has rendered the human race. It has put common sense back where it belongs on the topmost shelf next to Jules Verne's dusty canister labelled discarded. The series is divergent therefore we may be able to do something with it. O Heavens! Mathematics is a tool for thought. A highly necessary tool in a world where both feedback and non linearities abound. Similarly all kinds of parts of mathematics serve as tools for other parts and for other sciences. Applying a simple rewriting rule to the quote on the right above one finds such statements as One service topology has rendered mathematical physics. One service logic has rendered computer science. One service category theory has rendered mathematics. All arguably true. And all statements obtainable this way form part of the raison d'être of this series. *Asynchronous Circuit Design* Chris J. Myers, 2001-07-23 With asynchronous circuit design becoming a powerful tool in the development of new digital systems circuit designers are expected to have asynchronous design skills and be able to leverage them to reduce power consumption and increase system speed. This book walks readers through all of the different methodologies of asynchronous circuit design emphasizing practical techniques and real world applications instead of theoretical simulation. The only guide of its kind it also features an ftp site complete with support materials. Market: Electrical Engineers, Computer Scientists, Device Designers and Developers in industry. Synchronization Design for Digital Systems Teresa H. Meng, 2012-12-06 Synchronization is one of the important issues in digital system design. While other approaches have always been intriguing up until now synchronous operation using a common clock has been the dominant design philosophy. However we have reached the point with advances in technology

where other options should be given serious consideration This is because the clock periods are getting much smaller in relation to the interconnect propagation delays even within a single chip and certainly at the board and backplane level To a large extent this problem can be overcome with careful clock distribution in synchronous design and tools for computer aided design of clock distribution However this places global constraints on the design making it necessary for example to redesign the clock distribution each time any part of the system is changed In this book some alternative approaches to synchronization in digital system design are described and developed We owe these techniques to a long history of effort in both digital system design and in digital communications the latter field being relevant because large propagation delays have always been a dominant consideration in design While synchronous design is discussed and contrasted to the other techniques in Chapter 6 the dominant theme of this book is alternative approaches

Information Science in Action: System Design Anthony Debons, Arvid G. Larson, 2012-12-06 In August 1978 one hundred or so scholars from several countries around the world met in Crete Greece to discuss the progress made in designing information systems and the relation of information science to this activity This was the Third Advanced Study Institute supported by the North Atlantic Treaty Organization Brussels Belgium The first Institute was conducted in 1972 and held in Seven Springs Pennsylvania The results of this Institute were published by Marcel Dekker and titled Information Science Search for Identity The second Institute was held at the College of Librarianship Aberystwyth Wales in the summer of 1974 The proceedings were published by Noordhoff International Publishing Leyden The Netherlands entitled Perspectives of Information Science edited by A Debons and Hiram Cameron The three institutes that were conducted shared a common purpose namely to assess the state of affairs of information science and to share this assessment with international community Information science can be said to have emerged during the past two three decades in response to the significant increase in data knowledge processing technology the growth of knowledge as the result of these trends and the increase in problem solving decision making complexity that faced all institutions at all levels throughout the world Information systems for many reasons remain as an abstraction Nevertheless considerable funds and human efforts are being expended on them Thus such systems are of vital concerns to both scientists and technologists who are involved in them
