Kinds Todd Charles Wood, Paul A. Garner, 2009-01-22 A belief in creationism even in young age creationism does not necessitate belief in the unique creation of each species Instead many creationists accept a secondary origin of species from ancestors originally created by God In this view groups of modern species constitute the Genesis kinds that God originally created and beyond which evolution cannot proceed if it can even be called evolution In this collection of papers six scholars examine the species and the Genesis kinds Topics covered include the history of creationist and Christian perspectives on the origin of species an analysis of the Hebrew word min kind from the perspective of biblical theology a baseline of minimum speciation within kinds inferred from island endemics a comprehensive list of proposed kinds from the mammalian fossil record the occurrence of discontinuity between kinds and the origin of new species by symbiosis Abstract **Measuring**

C. Sheppard, Simon K. Davy, Graham M. Pilling, Nicholas A. J. Graham, 2018 Coral reefs represent the most spectacular and diverse marine ecosystem on the planet as well as a critical source of income for millions of people However the combined effects of human activity have led to a rapid decline in the health of reefs worldwide with many now facing complete destruction Their world wide deterioration and over exploitation has continued and even accelerated in many areas since the publication of the first edition in 2009 At the same time there has been a near doubling in the number of scientific papers

that have been written in this short time about coral reef biology and the ability to acclimate to ocean warming and acidification This new edition has been thoroughly revised and updated incorporating the significant increase in knowledge gained over the last decade whilst retaining the book's focus as a concise and affordable overview of the field The Biology of Coral Reefs provides an integrated overview of the function physiology ecology and behaviour of coral reef organisms Each chapter is enriched with a selection of boxes on specific aspects written by internationally recognised experts As with other books in the Biology of Habitats Series the emphasis in this book is on the organisms that dominate this marine environment although pollution conservation climate change and experimental aspects are also included Indeed particular emphasis is placed on conservation and management due to the habitat's critically endangered status A global range of examples is employed which gives the book international relevance

The Chimpanzees of Rubondo Island Josephine Nadezda Msindai, Volker Sommer, 2022-10-05 How did a random batch of chimpanzees come to populate a small island in Tanzania where apes had never lived before Combining information gathered from fieldwork laboratory and archival research this book tells the unique story of chimpanzee babies taken from their forest homes in West Central Africa and sold to European zoos and circuses to then be shipped to Lake Victoria and set free on Rubondo Island These founder animals learnt what to eat how to build nests to breed and raise young ultimately forming a chimpanzee typical fission fusion society that today is thriving The authors compare the ecology behaviour and genetics of the Rubondo population with communities of wild chimpanzees providing exciting insights into how our closest relatives adjust to changing environments At the same time a reconstruction of the historical context of the Rubondo experiment reflects on its chequered colonial heritage and the introduction is viewed against current threats to the survival of apes in their natural habitats The book will be of interest to scholars and professionals working in primatology animal behaviour conservation biology and postcolonial studies

Kooijman, 2010 The Dynamic Energy Budget theory unifies the commonalities between organisms and links different levels of biological organisation **Data-Centric Biology** Sabina Leonelli, 2016-11-18 In recent decades there has been a major shift in the way researchers process and understand scientific data Digital access to data has revolutionized ways of doing science in the biological and biomedical fields leading to a data intensive approach to research that uses innovative methods to produce store distribute and interpret huge amounts of data In Data Centric Biology Sabina Leonelli probes the implications of these advancements and confronts the questions they pose Are we witnessing the rise of an entirely new scientific epistemology If so how does that alter the way we study and understand life including ourselves Leonelli is the first scholar to use a study of contemporary data intensive science to provide a philosophical analysis of the epistemology of data In analyzing the rise internal dynamics and potential impact of data centric biology she draws on scholarship across diverse fields of science and the humanities as well as her own original empirical material to pinpoint the conditions under which digitally available data can further our understanding of life Bridging the divide between historians sociologists and philosophers of science Data Centric Biology offers a nuanced account of an issue that is of fundamental importance to our understanding of contemporary scientific practices Holistic Darwinism Peter Corning, 2010-08-15 In recent years evolutionary theorists have come to recognize that the reductionist individualist gene centered approach to evolution cannot sufficiently account for the emergence of complex biological systems over time Peter A Corning has been at the forefront of a new generation of complexity theorists who have been working to reshape the foundations of evolutionary theory Well known for his Synergism Hypothesis a theory of complexity in evolution that assigns a key causal role to various forms of functional synergy Corning puts this theory into a much broader framework in Holistic Darwinism addressing many of the issues and concepts associated with the evolution of complex systems Corning s paradigm embraces and integrates many related theoretical developments of recent years from multilevel selection theory to niche construction theory gene culture coevolution theory and theories of self organization Offering new approaches to thermodynamics information theory and economic analysis Corning suggests how all of these domains can be brought firmly within what he characterizes as a post neo Darwinian evolutionary synthesis *Innovative Methods of Marine Ecosystem Restoration* Thomas J. Goreau, Robert Kent Trench, 2012-12-04 Innovative Methods of Marine Ecosystem Restoration offers a ray of hope in an increasingly gloomy scenario This book is the first presentation of revolutionary new methods for restoring damaged marine ecosystems It discusses new techniques for greatly increasing the recruitment growth survival and resistance to stress of marine ecosystems fisheries and eroding shorelines maintaining biodiversity and productivity where it would be lost The book provides experimental proof that mild electrical stimulation results in increased settlement increased growth and reduced mortality for a wide variety of marine organisms including

corals oysters sponges sea grasses and salt marsh grasses In addition to the diversity of ecosystems and geographic regions covered the contributors from fourteen nations across the globe make this work the first truly global study of marine ecosystem restoration This book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license

Hungry Hollow A.K. Dewdney, 2012-12-06 Hungry Hollow is simply an ordinary creek winding through about a mile of ordinary forest and meadow somewhere east of the Rocky Mountains But like all such places it is also a vast and intricate web of life with extensions that reach around the planet back into prehistoric time and within to a teeming bizarre microscopic world In dozens of short wonderfully imaginative chapters A.K. Dewdney introduces us to the denizens of this world We encounter a hackberry tree whose branches perfectly reproduce the taxonomic Tree of Life learn how it would look and feel to shrink by stages to the size of an amoeba while swimming in a river watch a toad win the lottery and see the world of Hungry Hollow from the viewpoint of bears earthworms and even stones This is an excursion into natural history like no other

Power, State and Space Marco Aliberti, Ottorino Cappelli, Rodrigo Praino, 2023-07-18 This book explains on what basis a nation can claim the status of space power what are the criteria differentiating a space power from lesser space actors and how their spacepower can be empirically measured and assessed To this end it sets forth a comprehensive multidisciplinary framework to enable a dynamic comparison of space actors and of the pathways that lead them in and out of the space powers club Drawing upon a critical review of the existing literature it conceptualises spacepower as a form of state power based on the complex interplay between the two defining dimensions of stateness namely the well studied dimension of capacity and the often neglected yet exceedingly important dimension of autonomy The book demonstrates that only actors possessing high levels of both autonomy and capacity qualify as space powers Different levels of either capacity or autonomy produce other types of space actors including skilled spacefarers self-reliant spacefarers primed spacefarers and emerging space actors This innovative conceptual framework is complemented by an in-depth comparative assessment that collects and processes a large amount of hard-to-find data on the most active global space actors and aggregates multiple indicators into a compound non-hierarchical index of space power visualised in the form of a matrix

Towards A New Social Order? Real Democracy, Sustainability & Peace Patrick Holz, 2018-01-31 This contribution argues that a long established social order has been in place since the first stratified societies in the Near Middle East which unavoidably comes with substantial economic political and environmental repercussions Part I of the book dissects the various facets of this order which is termed the social dominance paradigm while in Part II a fundamentally different order the peace paradigm is introduced The latter rests on real democracy in the Athenian sense sustainability and peace As such both paradigms function as vehicles for further analysis and research while the peace paradigm also provides a rough plan for the implementation of transformational change Typically political economic social and environmental research seeks to increase specialized knowledge Here however the overall intent is to utilize interdisciplinary evidence and connect the dots between a number defining features within seemingly modern societies The argument is that these are in fact not modern at all but follow an ancient template of power control and coordination concentrated in the hands of the few Potentially this contribution can function as a trans disciplinary methodological framework as well as an information hub for researchers in the fields of political and social sciences history anthropology evolutionary biology organization and peace studies Practitioners who are interested in fundamental social change may also find the issues raised to be of interest As such this book provides a generalist evidence based discussion of a multi disciplinary nature that may pique the interest of both experts and amateurs alike
