Symbolic Species The Co Evolution Of Language And The Human Brain:

The Symbolic Species: The Co-evolution of Language and the Brain Terrence W. Deacon, 1998-04-17 A work of enormous breadth likely to pleasantly surprise both general readers and experts New York Times Book Review This revolutionary book provides fresh answers to long standing questions of human origins and consciousness Drawing on his breakthrough research in comparative neuroscience Terrence Deacon offers a wealth of insights into the significance of symbolic thinking from the co evolutionary exchange between language and brains over two million years of hominid evolution to the ethical repercussions that followed man s newfound access to other people s thoughts and emotions Informing these insights is a new understanding of how Darwinian processes underlie the brain s development and function as well as its evolution In contrast to much contemporary neuroscience that treats the brain as no more or less than a computer Deacon provides a new clarity of vision into the mechanism of mind It injects a renewed sense of adventure into the experience of being human

The Symbolic Species Terrence William Deacon, 1997 Discusses the evolution of language from the viewpoint of symbolic reference as opposed to the conventional grammar based theories *The Symbolic Species* Terrence W. Deacon, 1998 Human language is one of the most distinctive behavioural adaptations on the planet Languages evolved in only one species in only one way without precedent and without parallel Hundreds of millions of years of evolution have produced hundreds of thousands of species with brains and tens of thousands with complex learning abilities Only one of these has ever wondered about its place in the whole scheme because only one through its language evolved with the ability to do so This book aims to alter the understanding of what it means to be human the universe isn t a soulless blindly spinning clockwork but instead nascent hear and mind The Symbolic Species Terrence William Deacon, 1997 **The Coevolution of Language, Teaching, and Civil Discourse Among Humans** Donald M. Morrison, 2020-07-25 This book traces the evolutionary trajectory of language and teaching from the earliest periods of human evolution to the present day The author argues that teaching is unique to humans and our ancestors and that the evolution of teaching language and culture are the inextricably linked results of gene culture coevolutionary processes Drawing on related fields including archaeology palaeontology cultural anthropology evolutionary psychology and linguistics he makes the case that the need for joint attention and shared goals in complex adaptive strategies is the underlying driver for the evolution of language like communication This book will be of interest to students and scholars of these disciplines as well as lay readers with an interest in human origins The Evolution of Language Andrew D. M. Smith, Kenny Smith, Ramon Ferrer i Cancho, 2008 This proceedings volume contains the latest results from the field of particle physics The contributions cover the current status of all the Large Hadron Collider LHC experiments the implications of the LHC for cosmology and the search for dark matter and nuclear astrophysics It also includes work on the current status of the future International Linear Collider ILC Mirror Neurons and the Evolution of Brain and Language Maxim I. Stamenov, Vittorio Gallese, 2002-12-17 The emergence of

language social intelligence and tool development are what made homo sapiens sapiens differentiate itself from all other biological species in the world The use of language and the management of social and instrumental skills imply an awareness of intention and the consideration that one faces another individual with an attitude analogical to that of one's own The metaphor of mirror aptly comes to mind Recent investigations have shown that the human ability to mirror other's actions originates in the brain at a much deeper level than phenomenal awareness A new class of neurons has been discovered in the premotor area of the monkey brain mirror neurons Quite remarkably they are tuned to fire to the enaction as well as observation of specific classes of behavior fine manual actions and actions performed by mouth They become activated independent of the agent be it the self or a third person whose action is observed The activation in mirror neurons is automatic and binds the observation and enaction of some behavior by the self or by the observed other The peculiar first to third person intersubjectivity of the performance of mirror neurons and their surprising complementarity to the functioning of strategic communicative face to face first to second person interaction may shed new light on the functional architecture of conscious vs unconscious mental processes and the relationship between behavioral and communicative action in monkeys primates and humans The present volume discusses the nature of mirror neurons as presented by the research team of Prof Giacomo Rizzolatti University of Parma who originally discovered them and the implications to our understanding of the evolution of brain mind and communicative interaction in non human primates and man Series B

Human Identity at the Intersection of Science, Technology and Religion Dr Christopher C Knight, Professor Nancey Murphy, 2013-06-28

Humans are unique in their ability to reflect on themselves Recently a number of scholars have pointed out that human self conceptions have a history Ideas of human nature in the West have always been shaped by the interplay of philosophy theology science and technology The fast pace of developments in the latter two spheres neuroscience genetics artificial intelligence biomedical engineering call for fresh reflections on what it means now to be human and for theological and ethical judgments on how we might shape our own destiny in the future The leading scholars in this book offer fresh contributions to the lively quest for an account of ourselves that does justice to current developments in theology science technology and philosophy

Language as a Complex Adaptive System Nick C. Ellis, Diane Larsen-Freeman, 2009-12-30

Explores a new approach to studying language as a complex adaptive system illustrating its commonalities across many areas of language research Brings together a team of leading researchers in linguistics psychology and complex systems to discuss the groundbreaking significance of this perspective for their work Illustrates its application across a variety of subfields including languages usage language evolution language structure and first and second language acquisition What a breath of fresh air As interesting a collection of papers as you are likely to find on the evolution learning and use of language from the point of view of both cognitive underpinnings and communicative functions Michael Tomasello Max Planck Institute for Evolutionary Anthropology

Language and History Nigel Love, 2006-04-18 When linguistics was first established as an academic discipline in the nineteenth century it was envisaged as an essentially historical study Languages were to be treated as historical objects evolving through gradual but constant processes of change over long periods of time In recent years however there has been much discussion by historians of a linguistic turn in their own discipline and in linguistics integrationist theory has mounted a radical challenge to the traditional notion of languages as possible objects of inquiry Language and History develops the integrationist critique of orthodox linguistics while at the same time extending its implications to the field of history By doing so it throws light on what is now recognized by many historians to be a crisis in their own discipline Underlying the post modernist scepticism about traditional forms of historiography the integrationist approach reveals a more deep seated problem concerning the interface between philosophy of history and philosophy of language With chapters from a range of leading international contributors Language and History represents a significant contribution to the developing work of the integrationists

Rethinking Human Evolution Jeffrey H. Schwartz, 2022-11-01 Contributors from a range of disciplines consider the disconnect between human evolutionary studies and the rest of evolutionary biology The study of human evolution often seems to rely on scenarios and received wisdom rather than theory and methodology with each new fossil or molecular analysis interpreted as supporting evidence for the presumed lineage of human ancestry We might wonder why we should pursue new inquiries if we already know the story Is paleoanthropology an evolutionary science Are analyses of human evolution biological In this volume contributors from disciplines that range from paleoanthropology to philosophy of science consider the disconnect between human evolutionary studies and the rest of evolutionary biology All of the contributors reflect on their own research and its disciplinary context considering how their fields of inquiry can move forward in new ways The goal is to encourage a more multifaceted intellectual environment for the understanding of human evolution Topics discussed include paleoanthropology s history of procedural idiosyncrasies the role of mind and society in our evolutionary past humans as large mammals rather than a special case genomic analyses computational approaches to phylogenetic reconstruction descriptive morphology versus morphometrics and integrating insights from archaeology into the interpretation of human fossils Contributors Markus Bastir Fred L Bookstein Claudine Cohen Richard G Delisle Robin Dennell Rob DeSalle John de Vos Emma M Finestone Huw S Groucutt Gabriele A Macho

Fabrizio Mc Manus Apurva Narechania Michael D Petraglia Thomas W Plummer J W F Reumer Jeff Rosenfeld Jeffrey H Schwartz Dietrich Stout Ian Tattersall Alan R Templeton Michael Tessler Peter J Waddell Martine Zilversmit Theological Anthropology in the Anthropocene Jan-Olav Henriksen, 2022-12-14 The Anthropocene presents theology and especially theological anthropology with unprecedented challenges There are no immediately available resources in the theological tradition that reflect directly on such experiences Accordingly the situation calls for contextually based theological reflection of what it means to be human under such circumstances This book discusses the main elements in theological anthropology in light of the fundamental points a that theological anthropology needs to be articulated with reference to and informed by the concrete historical circumstances in which humanity presently finds itself and b that the notion of the Anthropocene can be used as a heuristic tool to describe important traits and conditions that call for a response by humanity and which entail the need for a renewal of what a Christian self understanding means Jan Olav Henriksen explores what such a response entails from the point of view of contemporary theological anthropology and discusses selected topics that can contribute to a contextually based position The Evolution of Human Cleverness Richard Hallam, 2022-05-01 The Evolution of Human Cleverness presents a unique introduction to the way human cognitive abilities have evolved The book comprises a series of mini essays on distinct topics in which technical terms are simplified considering how humans made the long journey from our ape like ancestors to become capable of higher level reasoning and problem solving All the topics are cross linked allowing the reader to dip in and out but certain key concepts run through the underlying reasoning Chiefly these are adaptation and selection the distinction between ultimate and proximate causes of behaviour gene culture co evolution and domain general versus domain specific cognitive processes The book should help the reader draw lessons for the human species as a whole especially in view of the environmental threats to its own existence Entries have been carefully crafted to cut through scientific jargon providing bite sized and digestible chunks of knowledge making the topic accessible for students and lay readers alike The author draws on research from diverse fields including Psychology Anthropology Archaeology Biology and Neuroscience to provide an unbiased account of the field making it an ideal text for students of all levels Human Language and Our Reptilian Brain Philip Lieberman, 2009-07-01 This book is an entry into the fierce current debate among psycholinguists neuroscientists and evolutionary theorists about the nature and origins of human language A prominent neuroscientist here takes up the Darwinian case using data seldom considered by psycholinguists and neurolinguists to argue that human language though more sophisticated than all other forms of animal communication is not a qualitatively different ability from all forms of animal communication does not require a quantum evolutionary leap to explain it and is not unified in a single language instinct Using clinical evidence from speech impaired patients functional neuroimaging and evolutionary biology to make his case Philip Lieberman contends that human language is not a single separate module but a functional neurological system made up of many separate abilities Language remains as it began

Lieberman argues a device for coping with the world But in a blow to human narcissism he makes the case that this most remarkable human ability is a by product of our remote reptilian ancestors abilities to dodge hazards seize opportunities and live to see another day The Evolutionary Emergence of Language Chris Knight,Michael Studdert-Kennedy,James Hurford,2000-11-20 Language has no counterpart in the animal world Unique to Homo sapiens it appears inseparable from human nature But how when and why did it emerge The contributors to this volume linguists anthropologists cognitive scientists and others adopt a modern Darwinian perspective which offers a bold synthesis of the human and natural sciences As a feature of human social intelligence language evolution is driven by biologically anomalous levels of social cooperation Phonetic competence correspondingly reflects social pressures for vocal imitation learning and other forms of social transmission Distinctively human social and cultural strategies gave rise to the complex syntactical structure of speech This book presenting language as a remarkable social adaptation testifies to the growing influence of evolutionary thinking in contemporary linguistics It will be welcomed by all those interested in human evolution evolutionary psychology linguistic anthropology and general linguistics **The Cradle of Language** Rudolf Botha,Chris Knight,2009-04-30 This book is the first to focus on the African origins of human language It explores the origins of language and culture 250 000 150 000 years ago when modern humans evolved in Africa Scholars from around the world address the fossil genetic and archaeological evidence and critically examine the ways it has been interpreted The book also considers parallel developments among Europe s Neanderthals and the contrasting outcomes for the two species Following an extensiveintroduction contextualizing and linking the book s topics and approaches fifteen chapters bring together many of the most significant recent findings and developments in modern human origins research The fields represented by the authors include genetics biology behavioural ecology linguistics archaeology cognitive science and anthropology **Philosophy and the Sciences for Everyone** Michela Massimi,2014-09-25 What is the origin of our universe What are dark matter and dark energy What is our role in the universe as human beings capable of knowledge What makes us intelligent cognitive agents seemingly endowed with consciousness Scientific research across both the physical and cognitive sciences raises fascinating philosophical questions Philosophy and the Sciences For Everyone introduces these questions and more It begins by asking what good is philosophy for the sciences before examining the following questions The origin of our universe Dark matter and dark energy Anthropic reasoning in philosophy and cosmology Evolutionary theory and the human mind What is consciousness Intelligent machines and the human brain Embodied Cognition Each chapter includes an introduction summary and study questions and there is a glossary of technical terms Designed to be used on the corresponding Philosophy and the Sciences online course offered by the University of Edinburgh this book is also a superb introduction to central topics in philosophy of science and popular science **Controversies in Contemporary Religion** Paul Hedges,2014-09-09 Religious or spiritual beliefs underpin many controversies and conflicts in the contemporary world Written by a range of scholarly contributors this three volume set

provides contextual background information and detailed explanations of religious controversies across the globe

Controversies in Contemporary Religion Education Law Politics Society and Spirituality is a three volume set that addresses a wide variety of current religious issues analyzing religion s role in the rise of fundamentalism censorship human rights environmentalism and sustainability sexuality bioethics and other questions of widespread interest Providing in depth context and analysis far beyond what s available in the news or online this work will enable readers to understand the nature of and reasons for controversies in current headlines The first volume covers theoretical and academic debates the second looks at debates in the public square and ethical issues while the third examines specific issues and case studies These volumes bring detailed and careful debate of a range of controversies together in one place including topics not often covered for example how religions promote or hinder social cohesion and peace the relationship of religions to human rights and the intersection of Buddhism and violence Written by a range of experts that includes both established and emerging scholars the text explains key debates in ways that are accessible and easy to understand for lay readers as well as undergraduate students researching particular issues or global religious trends Friedrich Max Müller Lourens Peter van den Bosch,2018-08-14

Friedrich Max M ller was one of the great scholars of the nineteenth century His studies on the history and nature of religion were of great interest to both scholarly and more popular circles and he was for a long time an influential figure in the cultural life of Victorian Britain Therefore a new study of his life and especially of his works needs no apology The book gives a survey of M ller s life and his main ideas on language mythology religion Christianity and the missions as well as his philosophy of religion The last chapter deals with the legacy of M ller s ideas in the twentieth century The book is particularly useful for historians of religion interested in the origin of the science of religion and for historians specialized in the history of ideas
