Symptoms Illness Behavior And Help Seeking:

Symptoms, Illness Behavior, and Help-seeking David Mechanic, 1982 Presenting a new argument this book attacks the view that if a fetus has the moral standing of a person it has a right to life and abortion is impermissible Most discussion of abortion has assumed that this premise is correct and so has focused on the question of the personhood of the fetus Kamm however argues that abortion can be moral even if the fetus is indeed a person Kamm begins by examining the Supreme Court's *Roe v Wade* decision and considers whether the potential to become a person should protect the fetus from abortion After presenting the case for killing persons in non abortion contexts she goes on to apply this argument to the case of abortion and offers a detailed consideration of the differences between the two cases focusing in particular on the significance of pregnancy as a natural phenomenon that occurs to only one of the two sexes Kamm develops her own argument defending the morality of abortion which emerges as part of a broader theory of creating new people responsibly In a concluding chapter she explores the implications of her argument for informed consent to abortion responsibilities in pregnancy that is not aborted and the significance of extra uterine gestation devices for the permissibility of abortion

Illness Behavior Sean McHugh, T. Michael Vallis, 2012-12-06 In August 1985 the 2nd International Conference on Illness Behaviour was held in Toronto Ontario Canada The first International Conference took place one year previous in Adelaide South Australia Australia This book is based on the proceedings of the second conference The purpose behind this conference was to facilitate the development of a single integrated model to account for illness experience and presentation A major focus of the conference was to outline methodological issues related to current behaviour research A multidisciplinary approach was emphasized because of the bias that collaborative efforts are likely to be the most successful in achieving greater understanding of illness behaviour Significant advances in our knowledge are occurring in all areas of

the biological and social sciences albeit more slowly in the latter areas. Marked specialization in each of these areas has led to greater difficulty in integrating new knowledge with that of other areas and the development of a meaningful cohesive model to which all can relate. Thus there is a major need for forums such as that provided by this conference.

The Logic of Social Control A.V. Horwitz, 2013-06-29

Search for the Causes of Schizophrenia Heinz Häfner, Wagner F. Gattaz, 2012-12-06

H. HAFNER and W. F. GATTAZ: Between 1891 and 1955 three founders of modern psychiatry, Emil Kraepelin (1856-1926), Karl Jaspers (1883-1969) and Kurt Schneider (1887-1967), lectured at the University of Heidelberg. Kraepelin for 12 years, Jaspers for over 25 years and Schneider for approximately 10 years. During this period they laid the foundations of descriptive psychopathology and modern classification and contributed essentially to the development of our current thinking on schizophrenia. In 1986, on the occasion of the 600th anniversary of the University of Heidelberg, we held a symposium in memory of these three giants of psychiatry for which we chose the title "Search for the Causes of Schizophrenia". It was jointly organized by the Central Institute of Mental Health in Mannheim and the Department of Psychiatry of the University of Heidelberg. The intention was to meet one of the major challenges of current psychiatric research, namely the fact that since Kraepelin's masterly description of Dementia praecox (1894) and E. Bleuler's slightly different definition of schizophrenia (1911), we have made only insufficient advances in clarifying the aetiology of this frequent and still often disabling mental disease.

Health Psychology of Women Catherine Niven, Doug Carroll, 2013-12-16

First Published in 1993. Since health psychology is concerned with the universal values of life and death, well-being and suffering, it might be expected that its researchers would be keen to examine both male and female experiences of these phenomena. In practice, however, health psychology has followed health research in adopting a largely male perspective both in its general approach and selection of topics. Women are different from men not only in terms of anatomy but in terms of the socialization processes to which they have been exposed and the social and economic positions they occupy. These differences have a significant impact on women's health, predisposing them to some disorders and protecting them from others. While it is true that male mortality exceeds female mortality from conception to old age, women's survival has the price of increased mental and physical illness. Men die but women suffer. Despite a growing awareness of these differences, there continues to be a distinct bias towards using male subjects for research and studying those diseases which affect more men than women. The Health Psychology of Women is a response to this imbalance and a challenge to the attitude which explores the behavior of half the population in order to draw conclusions about the experience of the whole. It is essential reading for students and researchers of psychology and health and health professionals in training and practice.

Social Causes of Psychological Distress Catherine E. Ross, 2017-07-05

A core interest of social science is the study of stratification inequalities in income, power, and prestige. Few persons would care about such inequalities if the poor, powerless, and despised were as happy and fulfilled as the wealthy, powerful, and admired. Social research often springs from humanistic empathy and concern as much

as from scholarly and scientific curiosity An economist might observe that black Americans are disproportionately poor and investigate racial differences in education employment and occupation that account for disproportionate poverty A table comparing additional income blacks and whites can expect for each additional year of education is thus as interesting in its own right as any dinosaur bone or photo of Saturn However something more than curiosity underscores our interest in the table Racial differences in status and income are a problem in the human sense Inequality in misery makes social and economic inequality personally meaningful There are two ways social scientists avoid advocacy in addressing issues of social stratification The first way is to resist projecting personal beliefs values and responses as much as possible while recognizing that the attempt is never fully successful The second way is by giving the values of the subjects an expression in the research design Typically this takes the form of opinion or attitude surveys Researchers ask respondents to rate the seriousness of crimes the appropriateness of a punishment for a crime the prestige of occupations the fair pay for a job or the largest amount of money a family can earn and not be poor and so on The aggregate judgments and variations in judgments represent the values of the subjects and not those of the researcher They are objective facts with causes and consequences of interest in their own right This work is an effort to move methodology closer to human concerns without sacrificing the scientific grounds of research as such

Life-Span Research on the Prediction of Psychopathology L. Erlennmeyer-Kimling, Nancy E. Miller, 2021-09-30 Originally published in 1986 the impetus for this volume developed from a conference organized by Barbara Snell Dohrenwend and the editors on behalf of the Society for Life History Research in Psychopathology the Society of the Study of Social Biology and the Center for Studies of Mental Health of Aging at the National Institute of Mental Health The theme of the conference was life span research on the prediction of psychopathology and the goal was to bring together outstanding researchers who were engaged in longitudinal investigations at the time and whose work collectively covered the entire life span from infancy to old age The papers that were presented at the conference were updated so that the chapters that follow represented current state of the art considerations in some of the best ongoing studies concerned with the prediction of psychopathology at that time *Medicine, Rationality and Experience* Byron J. Good, 1994 Biomedicine is often thought to provide a scientific account of the human body and of illness In this view non Western and folk medical systems are regarded as systems of belief and subtly discounted This is an impoverished perspective for understanding illness and healing across cultures one that neglects many facets of Western medical practice and obscures its kinship with healing in other traditions Drawing on his research in several American and Middle Eastern medical settings in this 1993 book Professor Good develops a critical anthropological account of medical knowledge and practice He shows how physicians and healers enter and inhabit distinctive worlds of meaning and experience He explores how stories or illness narratives are joined with bodily experience in shaping and responding to human suffering and argues that moral and aesthetic considerations are present in routine medical practice as in other forms of healing **Needs Assessment : Its Future** ,1988 **On the Social Utility of**

Psychopathology Nathaniel J. Pallone, 1986-01-01 Nathaniel Pallone argues that whatever else is true of psycho pathology it serves purposes which are socially useful What ver else is true of its clinical treatment such treatment func ions as a form of social regula ion In societal terms such treat ent may serve purposes quite other than the relief of psycho ogical disease or even the remedy of psychological disorder If psychopathology had not emerged naturally society might have needed to engender psychopathogenic conditions both to fulfill so ially useful purposes and to elicit that subtle mechanism for social regulation we term psychother py Pallone constructs his ar ument by summing up the evi ence for two points which apply to all psychotherapeutic practice that the relief of psychopathology is in no dependable way associ ted with psychotherapeutic treatment and that in all schools of psychotherapy the only clear cut criterion for terminating treatment is the limit of the pa ient s financial resources What surprised me in this manu cript is the stark simplicity with which Pallone constructs his ar

ument that society acquires the license to create unlimited psy hological disease to define this disease as intolerable to
 finance armies of disease alleviators providing treatments that are in even more profound contradic ion with each other than
 were the religions of old The illustra ion s make Pallone s argument crystal clear Ivan Illich from the Preface *Social
 Support: Theory, Research and Applications* I.G. Sarason,2013-11-11 No one is rich enough to do without a neighbor
 Traditional Danish Proverb This bit of Danish folk wisdom expresses an idea underlying much of the current thinking about
 social support While the clinical literature has for a long time recognized the deleterious effects of unwholesome social
 relationships only more recently has the focus broadened to include the positive side of social interaction those interpersonal
 ties that are desired rewarding and protective This book contains theoretical and research contributions by a group of
 scholars who are charting this side of the social spectrum Evidence is increasing that maladaptive ways of thinking and
 behaving occur disproportionately among people with few social supports Rather than sapping self reliance strong ties with
 others particularly family members seem to encourage it Reliance on others and self reliance are not only compatible but
 complementary to one another While the mechanism by which an intimate relationship is protective has yet to be worked out
 the following factors seem to be involved intimacy social integration through shared concerns reassurance of worth the
 opportunity to be nurtured by others a sense of reliable alliance and guidance The major advance that is taking place in the
 literature on social support is that reliance is being placed less on anecdotal and clinical evidence and more on empirical
 inquiry The chapters of this book reflect this important development and identify the frontiers that are currently being
