Synergetic Economics Time And Change In Nonlinear Economics:

Synergetic Economics Wei-Bin Zhang, 2013-03-07 Synergetic Economics presents a new advance in analytical economics. It deals with problems related to time and change in economic systems including complex aspects such as the effects of nonlinearity, instability, bifurcation, and chaos in economic evolution. The author argues that economic systems may run through a hierarchy of instabilities in which more and more structural patterns evolve. Such instabilities are caused by changes in the external parameters of the system. They may lead to new spatial-temporal patterns of the system. A number of explicit examples are provided to show how such behavior can occur in various dynamic economic systems. Analytical methods are also presented to cope with nonlinear problems. Of particular interest are sudden structural changes, the existence of regular and irregular oscillations, the role of random factors in economic evolution, and the effects of time scales and rates of adjustment of economic variables in economic analysis. The author carefully examines the implications of nonlinear phenomena for decision making and for economic development in general.

From Catastrophe to Chaos: A General Theory of Economic Discontinuities J. Barkley Rosser, 2013-03-14 From Catastrophe to Chaos: A General Theory of Economic Discontinuities presents an unusual perspective on economics and economic analysis. Current economic theory largely depends upon assuming that the world is fundamentally continuous. However, an increasing amount of economic research has been done using approaches that allow for discontinuities such as catastrophe theory, chaos theory, synergetics, and fractal geometry. The spread of such approaches across a variety of disciplines of thought has constituted a virtual intellectual revolution in recent years. This book reviews the applications of these approaches in various subdisciplines of economics and draws upon past economic thinkers to develop an integrated view of economics as a whole from the perspective of inherent discontinuity.

Nonlinear Evolution of Spatial Economic Systems Peter Nijkamp, Aura Reggiani, 2012-12-06 Is our world more dynamic than it used to be in the past? Have phenomena in the social science field become unpredictable? Are chaotic events nowadays occurring more frequently than in

the past Such questions are often raised in popular debates on nonlinear evolution and self organizing systems At the same time many scientists are also raising various intriguing methodological issues Is it possible to separate deterministic chaos from random disturbances if their trajectories are almost similar Is prediction still possible in a world of chaos Poincare Is it possible to distinguish specification errors from measurement errors in a nonlinear dynamic model Is evolution a random process The list of such questions can easily be extended with dozens of others But despite the myriad of questions on problems of nonlinear evolution one common trait is evident in both the natural and the social sciences we are still groping in the dark in areas which are par excellence promising hunting grounds for exploratory and exploratory research viz structural grounds in an uncertain nonlinear world The present book aims at offering a collection of refreshing contributions to the above research issues by focusing attention in particular on nonlinear dynamic evolution in space at the Netherlands Institute for Advanced Study NIAS in Wassenaar the Netherlands The Institute has to be thanked for its hospitality and support reflected inter alia in a workshop at which several of the papers included in this book were discussed

New Keynesian Economics/post Keynesian Alternatives Roy Jeffrey Rotheim,1998 New Keynesian Economics has been the most significant development in economics in recent years However many modern thinkers have asked whether it actually builds upon or merely distorts Keynes work This unique volume provides the first full scale critique of the New Keynesian school of thought Within its pages Post Keynesian economists including many from the United States challenge New Keynesianism both on the grounds that it is not Keynesian and does not provide an adequate account of our current economic problems Sure to provoke much new debate and even controversy New Keynesian Economics seeks to reconcile these two seemingly intractable systems

Sociodynamics Wolfgang Weidlich,2013-01-18 Highly recommended This is an important book in putting the burgeoning field of sociodynamics on a solid footing Journal of Artificial Societies and Social Simulation This text deals with general modelling concepts in the social sciences their applications and their mathematical methods The author s well organized approach offers a clear coherent introduction to terminology approaches and goals in modelling Appropriate for advanced undergraduates and graduate students it requires a solid background in algebra and calculus The three part treatment begins by addressing general modelling concepts the second part provides applications and the third discusses mathematical method Topics include population dynamics group interaction political transitions evolutionary economics and urbanization Guiding students through a series of practical applications that illustrate the methods potential scope the text concludes with a detailed look at mathematical methods

New Keynesian Economics / Post Keynesian Alternatives Roy Rotheim,2013-03-07 The New Keynesian Economics has been the most significant development in economics in recent years Does it actually build upon Keynes work In this volume leading post Keynesian economists challenge New Keynesianism both on the grounds that it is not Keynesian and does not provide an adequate account of our current economic problems

Metropolitan Regions Johan Klaesson,Börje Johansson,Charlie Karlsson,2013-06-05

Metropolitan growth has been dramatic in the past several decades and today metropolitan regions are recognized as the main driving forces in national growth and development as well as in national and global innovation processes. The purpose of this book is to contribute to a better understanding of how metropolitan regions and their subsystems interact and compete, why they differ in their capacity to nurture innovation and growth, and how metropolitan policies must be designed to secure the region's long-term vitality. To that end, it presents new contributions on theories of urban growth, institutions and policies of urban change, and case studies of urban growth prepared by international experts.

Complexity and Self-Organization in Social and Economic Systems Fukang Wang, Michele Sanglier, 2012-12-06. The Institut International de Physique et de Chimie fondé par E. Solvay and the Institute of Nonequilibrium Systems of Beijing Normal University jointly sponsored a conference on The Complexity and Self-organization in Socio-economic Systems on October 17-20, 1994, at Beijing, China. The purpose of the conference was to explore the complexity and evolutionary laws of socio-economic systems through nonlinear dynamic systems and self-organization theory. The conference was chaired by Professor M. Sanglier and Professor Fang Fukang and was introduced by the Nobel prize winner Professor I. Prigogine and the vice director of the Chinese National System Reform Committee Mr. Wu Jie. The conference was held at an important time. On the one hand, the research in the natural sciences about the evolution of complex systems has made great progress; modern scientific theories such as nonlinear dynamic system theory and self-organization theory are becoming more and more mature, and a series of methods dealing with these complex systems are being developed, which enable us to understand and study non-equilibrium uncertainty and instability. On the other hand, human societies around the world witness a general increase of connectedness, interactivity, and an increase of reaction speeds to decisions. In this context, the deterministic linear way of thinking becomes more and more inadequate, and this stimulates the development of non-linear science.

Ambiguity in Mind and Nature Peter Kruse, Michael Stadler, 2012-12-06. Ambiguity in Mind and Nature is the result of cognitive multistability, the phenomenon in which an unchanging stimulus usually visual gives rise in the subject to an oscillating perceptual interpretation. The vase face picture is one of the most famous examples. In this book, scientists from many disciplines, including physics, biology, psychology, maths, and computer science, present recent progress in this fascinating area of cognitive science. Using the phenomenon of multistability as a paradigm, they seek to understand how meaning originates in the brain as a consequence of cognitive processes. New advances are achieved by applying concepts such as self-organization, chaos theory, and complex systems to the latest results of psychological and neurophysical experiments.

Business and Non-profit Organizations Facing Increased Competition and Growing Customers' Demands Adam Nalepka, Anna Ujwary-Gil, 2017. From the perspective of commercial and non-commercial organizations, this monograph with contemporary organizational and management problems focuses on four thematic areas. Traditionally, the first one is concentrating the reader's attention on the internal aspects of the organization's functioning as an object of research. In this regard, articles related to

the concept of corporate social responsibility in two ways organizational research and bibliometric analysis The authors used an analogical bibliometric approach to examine trends in publishing for the concept of learning organizations In this part of the discussion the social aspect has been strongly displayed also thanks to the social capital and enterprise Another topic in this section is the role of the workers knowledge in creating innovative solutions emphasizing the role of trust and culture rich collaboration between employees employees participation in creating projects and organizational change In addition it discusses the role of information and knowledge networks and sharing knowledge among employees which does remain without influence on the shaping of individual employees careers Slightly different from the other articles though set in this section there is an article referring to the organizational pathology These considerations are much more valuable usually because of the difficult access to negative information The next section presents articles in the context of the modern tools used in the management of commercial and non commercial organizations This part of the discussion starts an article about forecasting methods and modern models of business management In opposition to these considerations the problem of unused modern management methods in the local government sector remains valid Also it refers to social media as a source of customer knowledge and management control which should be considered as a strong and innovative determinant influencing the development of contemporary management methods of a modern enterprise Interesting considerations are included in the article on the process management with emphasis on the dynamic management of business processes and IT systems that go with it The other articles present the concepts of the risk management model in a technology project business model used in franchising and the concept of accountability in conjunction with the development of innovation thanks to negotiating the role of intellectual capital The modern market economy forces organizations to develop their ability to adapt to the conditions by improving their organization continually It shows how modern day commercial and non commercial organizations are competing in a competitive market This section opens the article referring to the social competences of students developed during their studies and the competences of the future which were studied and compared in two universities The integral part of the organization s functioning of the organization in the environment is their broadly understood cooperation for the implementation of the objectives and achieving a competitive advantage in the market This trend covers articles referring to the participation of county in networking modeling synergistic interrelations within the business association or the conditions that should be met between enterprises and institutions supporting the technological development of the organization Other considerations concern customer preferences concerning their choice of commercial banks the factors that determine the choice of financial instruments by small and medium enterprises or the demands of sustainable family business development The final part of the articles is related to a broader perspective and so the functioning of the organization from a sectoral perspective and across industries A distinctive feature is a sectoral approach to knowledge based business services the determinants of knowledge based products in the pharmaceutical industry and the

behavior of competing companies in the chocolate and confectionery industry A separate topic in this section is the concept of capturing value or the value in a sectoral approach The issues related to the protection of personal data in the healthcare sector patent activity of enterprises in the technology park as well as the management of resources in the cluster The prepared monograph is an interdisciplinary compendium of knowledge on the functioning of both commercial and non commercial organizations in the context of three perspectives micro meso and macro The advantage of this type of studies is modern and up to date look at the problems of management organization behavior or the functioning of the organizations in the sector

The Economics of Complex Spatial Systems A. Reggiani, P. Nijkamp, 1998-05-05 This book argues that complexity theory offers new departures for spatial economic modelling It offers a broad overview of recent advances in non linear dynamics catastrophe theory chaos theory evolutionary theory and so forth and illustrates the relevance of this new paradigm on the basis of several illustrations in the area of space economy The empirical limitations inherent in the use of non linear dynamic systems approaches are also addressed Next the application potential of biocomputing in particular neural networks and evolutionary algorithms is stressed while various empirical model results are presented The book concludes with an agenda for further research

Brownian Agents and Active Particles Frank Schweitzer, 2007-08-31 This book lays out a vision for a coherent framework for understanding complex systems By developing the genuine idea of Brownian agents the author combines concepts from informatics such as multiagent systems with approaches of statistical many particle physics It demonstrates that Brownian agent models can be successfully applied in many different contexts ranging from physicochemical pattern formation to swarming in biological systems

Russian Mathematical Surveys, 2008 Discrete Dynamical Systems, Bifurcations and Chaos in Economics Wei-Bin Zhang, 2006-01-05 This book is a unique blend of difference equations theory and its exciting applications to economics It deals with not only theory of linear and linearized difference equations but also nonlinear dynamical systems which have been widely applied to economic analysis in recent years It studies most important concepts and theorems in difference equations theory in a way that can be understood by anyone who has basic knowledge of calculus and linear algebra It contains well known applications and many

recent developments in different fields of economics The book also simulates many models to illustrate paths of economic dynamics A unique book concentrated on theory of discrete dynamical systems and its traditional as well as advanced applications to economics Mathematical definitions and theorems are introduced in a systematic and easily accessible way Examples are from almost all fields of economics technically proceeding from basic to advanced topics Lively illustrations with numerous figures Numerous simulation to see paths of economic dynamics Comprehensive treatment of the subject with a comprehensive and easily accessible approach Economic Dynamics with Memory Vasily E. Tarasov,Valentina V. Tarasova,2021-01-18 This book presents the applications of fractional calculus fractional operators of non integer orders and fractional differential equations in describing economic dynamics with long memory Generalizations of basic economic concepts notions and methods for the economic processes with memory are suggested New micro and macroeconomic models with continuous time are proposed to describe the fractional economic dynamics with long memory as well The General Economic Theory Wei-Bin Zhang,2020-08-27 This book develops a general economic theory that integrates various economic theories and ideas and establishes important relationships between economic variables that are not formally recognized in the economic literature The author demonstrates how the basic model is integrated with neoclassical growth theory Walrasian general equilibrium theory and Ricardian distribution theory and how these theories can be incorporated through a single set of equations with a microeconomic basis The book offers new insights into income and wealth distribution between heterogeneous households racial and national differences in growth and development interdependence between different stock variables with portfolio choices among different markets It will appeal to scholars of economists interested in an integrative theoretical approach to this discipline
