2.2.CLASSIFICATION OF SYNONYMS

1. **Stylistic synonymy** implies no interchangeability in context because the underlying situations are different, e.g. *children – infants, dad – father.*

2. **Ideographic synonymy** presents a still lower degree of semantic proximity and is observed when the connotational and pragmatic aspects are similar, but there are certain differences in the denotational aspect of meaning of two words, e.g. *forest – wood, apartment – flat, shape – form.*

3. **Ideographic–stylistic synonymy** is characterized by the lowest degree of semantic proximity. e.g. *ask – inquire, expect – anticipate.*

   Synonymy and Semantic Classification Karen Sparck Jones,1964   **Synonymy and Semantic Classification** Karen Sparck Jones,1986   **Charting a New Course: Natural Language Processing and Information Retrieval.** John I. Tait,2005-04-01 Karen Sp rck Jones is one of the major figures of 20th century and early 21st Century computing and information processing Her ideas have had an important influence on the development of Internet Search Engines Her contribution has been recognized by awards from the natural language processing information retrieval and artificial intelligence communities including being asked to present the prestigious Grace Hopper lecture She continues to be an active and influential researcher Her contribution to the scientific evaluation of the effectiveness of such computer systems has been quite outstanding This book celebrates the life and work of Karen Sp rck Jones in her seventieth year It consists of fifteen new and original chapters written by leading international authorities reviewing the state of the art and her influence in the areas in which Karen Sp rck Jones has been active Although she has a publication record which goes back over forty years it is clear even the very early work reviewed in the book can be read with profit by those working on recent developments in information processing like bioinformatics and the semantic web   *Semantics and The Lexicon* James Pustejovsky,2012-12-06 The goal of this book is to integrate the research being carried out in the field of lexical semantics in linguistics with the work on knowledge representation and lexicon design in computational linguistics Rarely do these two camps meet and discuss the demands and concerns of each other s fields Therefore this book is interesting in that it provides a stimulating and unique discussion between the computational perspective of lexical meaning and the concerns of the linguist for the semantic description of lexical items in the context of syntactic descriptions This book grew out of the papers presented at a workshop held at Brandeis University in April 1988 funded by the American Association for Artificial Intelligence The entire workshop as well as the discussion periods accom panying each talk were recorded Once complete copies of each paper were available they were distributed to participants who were asked to provide written comments on the texts for review purposes VII JAMES PUSTEJOVSKY 1 INTRODUCTION There is currently a growing interest in the content of lexical entries from a theoretical perspective as well as a growing need to understand the organization of the lexicon from a computational view This volume attempts to define the directions that need to be taken in order to achieve the goal of a coherent theory of lexical organization   WordNet Christiane Fellbaum,1998 WordNet an electronic lexical database is considered to be the most important resource available to researchers in computational linguistics text analysis and many related areas English nouns verbs adjectives and adverbs are organized into synonym sets each representing one underlying lexicalized concept Different relations link the synonym sets The purpose of this volume is twofold First it discusses the design of WordNet and the theoretical motivations behind it Second it provides a survey of representative applications including word sense identification information retrieval selective preferences of verbs and lexical chains

Cognitive and Psychometric Analysis of Analogical Problem Solving Isaac I. Bejar,Roger Chaffin,Susan Embretson,2012-12-06 If one were to conduct an analysis of any profession the ability to think analogically is more than likely to be one of the requirements for success be it an architectural studio a research laboratory a legal office or a nuclear plant Cognitive scientists are aware of the prominence of analogical reasoning in all forms of reasoning and learning and have devoted substantial effort to ascer taining its nature Test builders like cognitive scientists are aware of the cen trality of analogical reasoning and figure correctly that a test that samples a student s ability to think analogically may well be a good predictor of success in a variety of fields This book is the result of a project to investigate analogical reasoning from both an individual differences and a cognitive perspective The book is directed to both researchers and practitioners concerned with the nature and measurement of analogical reasoning Cognitive scientists linguists psycholinguists and natural language researchers will find the seman tic taxonomy and accompanying empirical results food for thought Test devel opers will fmd it reassuring that performance on verbal analogy items is not just a reflection of the size of a person s vocabulary and that tests can be designed according to principles rather than assembled to satisfy a set of statistical speci fications Psychometricians will find that content and response modelling can go together and that there are distinct benefits in approaching psychometric re sponse modelling from that integrative perspective **Distributional Semantics** Alessandro Lenci,Magnus Sahlgren,2023-09-21 This book provides a comprehensive foundation of distributional methods in computational modeling of meaning It aims to build a common understanding of the theoretical and methodological foundations for students of computational linguistics natural language processing computer science artificial intelligence and cognitive science **Electric Words** Yorick Wilks,Brian M. Slator,Louise M. Guthrie,1996 One of the underlying messages of the book is that current research should be guided by both computational and theoretical tools and not only by statistical techniques that matters have gone far beyond counting to encompass the difficult province of meaning itself and how it can be formally expressed **Words and Intelligence I** Khurshid Ahmad,Christopher Brewster,Mark Stevenson,2007-05-03 Yorick Wilks is a central figure in the fields of Natural Language Processing and Artificial Intelligence His influence extends to many areas and includes contributions to Machines Translation word sense disambiguation dialogue modeling and Information Extraction This book celebrates the work of Yorick Wilks in the form of a selection of his papers which are intended to reflect the range and depth of his work The volume accompanies a Festschrift which celebrates his contribution to the fields of Computational Linguistics and Artificial Intelligence The papers include early work carried out at Cambridge University descriptions of groundbreaking work on Machine Translation and Preference Semantics as well as more recent works on belief modeling and computational semantics The selected papers reflect Yorick s contribution to both practical and theoretical aspects of automatic language processing <u>The Oxford Handbook of Computational Linguistics</u> Ruslan Mitkov,2004 This handbook of computational linguistics written for academics graduate students and researchers provides a

problem of the multiplicity of word meaning that is how we are able to give an infinite number of senses to words with finite means The first formally elaborated theory of a generative approach to word meaning it lays the foundation for an implemented computational treatment of word meaning that connects explicitly to a compositional semantics In contrast to the static view of word meaning where each word is characterized by a predetermined number of word senses that imposes a tremendous bottleneck on the performance capability of any natural language processing system Pustejovsky proposes that the lexicon becomes an active and central component in the linguistic description The essence of his theory is that the lexicon functions generatively first by providing a rich and expressive vocabulary for characterizing lexical information then by developing a framework for manipulating fine grained distinctions in word descriptions and finally by formalizing a set of mechanisms for specialized composition of aspects of such descriptions of words as they occur in context extended and novel senses are generated The subjects covered include semantics of nominals figure ground nominals relational nominals and other event nominals the semantics of causation in particular how causation is lexicalized in language including causative unaccusatives aspectual predicates experiencer predicates and modal causatives how semantic types constrain syntactic expression such as the behavior of type shifting and type coercion operations a formal treatment of event semantics with subevents and a general treatment of the problem of polysemy Language Speech and Communication series   *National Bureau of Standards Monograph* United States.
