Syntactic Wordclass Tagging:

Syntactic Wordclass Tagging H. van Halteren, 2013-03-14 In both the linguistic and the language engineering community the creation and use of annotated text collections or annotated corpora is currently a hot topic. Annotated texts are of interest for research as well as for the development of natural language processing NLP applications. Unfortunately the annotation of text material, especially more interesting linguistic annotation, is as yet a difficult task and can entail a substantial amount of human involvement. All over the world work is being done to replace as much as possible of this human effort by computer processing. At the frontier of what can already be done mostly automatically we find syntactic wordclass tagging: the annotation of the individual words in a text with an indication of their morpho-syntactic classification. This book describes the state of the art in syntactic wordclass tagging. As an attempt to give an overall view of the field, this book is of interest to at least two possibly very different types of reader. The first type consists of those people who are using or are planning to use tagged material and taggers. They will want to know what the possibilities and impossibilities of tagging are but are not necessarily interested in the internal working of automatic taggers. This on the other hand is the main interest of our second type of reader: the builders of automatic taggers and other natural language processing software. The Oxford Handbook of Word Classes Eva van Lier, 2023-11-22 This handbook explores multiple facets of the study of word classes, also known as parts of speech or lexical categories. These categories are of fundamental importance to linguistic theory and description, both formal and functional, and for both language internal analyses and cross-linguistic comparison. The volume consists of five parts that investigate word classes from different angles. Chapters in the first part address a range of fundamental issues including diversity and unity in word classes, around the world, categorization at different levels of structure, the distinction between lexical and functional words and hybrid categories. Part II examines the treatment of word classes across a wide range of contemporary linguistic theories such as Cognitive Grammar, Minimalist Syntax and Lexical Functional Grammar, while the focus of Part III is on individual word classes from major categories such as verb and noun to minor ones such as adpositions and ideophones. Part IV provides a number of cross-linguistic case studies exploring word classes in families including Afroasiatic, Sinitic, Mayan, Austronesian, and in sign languages. Chapters in the final part of the book discuss word classes from the perspective of various sub-disciplines of linguistics ranging from first and second language acquisition to computational and corpus linguistics. Together the contributions showcase the importance of word classes for the whole discipline of linguistics while also highlighting the many ongoing debates in the areas and outlining fruitful avenues for future research. *Corpus Linguistics and Textual History* Percy van Keulen, Willem Th. van Peursen, 2018-07-17 Over the years the use of computers for research has become increasingly important in Biblical Studies. However, a combination of computational linguistics with diachronic text-critical and text-historical approaches has hardly ever taken place. Quite often there is mutual misunderstanding between computational linguistics and more traditional approaches in the field of

linguistics and textual analysis For example in computer assisted research of modern text corpora it is common to treat the text as an unequivocal and unidimensional sequence of characters In Biblical Studies however either text is considered an abstraction the result of a scholarly reconstruction based on the extant textual witnesses Here a fundamental difference in approach reveals itself The present volume tries to overcome the misunderstanding between the various disciplines and to establish how a fruitful interaction of information technology linguistics and textual criticism can contribute to the analysis of ancient texts It addresses questions concerning the confrontation between synchronic and diachronic approaches the role of linguistic analysis in the interpretation of texts and the interaction of linguistic theory and the analysis of linguistic data The first section of this volume contains the papers presented at the CALAP seminar 2003 In the second section different aspects of the interdisciplinary analysis are applied to a selected passage from the Peshitta of Kings
