In 1959 C P Snow lamented the presence of what he called the two cultures the apparently unbridgeable chasm of understanding and knowledge between modern literature and modern science In recent decades scholars have worked diligently and often with great ingenuity to interrogate claims like Snow s that represent twentieth and twenty first century literature and science as radically alienated from each other The Cambridge Companion to Literature and Science offers a roadmap to developments that have contributed to the demonstration and emergence of reciprocal connections between the two domains of inquiry Weaving together theory and empiricism individual chapters explore major figures Shakespeare Bacon Emerson Darwin Henry James William James Whitehead Einstein Empson and McClintock major genres and modes of writing fiction science fiction non fiction prose poetry and dramatic works and major theories and movements pragmatism critical theory science studies cognitive science ecocriticism cultural studies affect theory digital humanities and expanded empiricisms This book will be a key resource for scholars graduate students and undergraduate students alike Climate Change Temporalities Kyrre Kverndokk, Marit Ruge Bjærke, Anne Eriksen, 2021-03-22 Climate Change Temporalities explores how various timescales timespans intervals rhythms cycles and changes in acceleration are at play in climate change discourses It argues that nuanced detailed and specific understandings and concepts are required to handle the challenges of a climatically changed world politically and socially as well as scientifically Rather than reflecting abstractly on theories of temporality this edited collection explores a variety of timescales and temporalities from narratives experience popular culture and everyday life in addition to science and history and the entanglements between them The chapters are clustered into three main sections exploring a range of genres such as questionnaires interviews magazines news media television series aquariums and popular science books to critically examine how and where climate change understandings are formed The book also includes chapters historicising notions of climate and temporality by exploring scientific debates and practices Climate Change Temporalities will be of great interest to students and scholars of humanistic climate change research environmental humanities studies of temporality and historicity cultural studies cultural history and popular culture **The X-Files and Literature** Sharon R.
