2 Wound Dressings and Skin Replacement

2 1 Introduction

Wounds to the skin are encountered every day Minor skin wounds cause some pain but these wounds will heal by themselves in time Even though many minor wounds heal effectively without scarring in the absence of treatment they heal more rapidly if they are kept clean and moist Devices such as Band Aids are used to assist in wound healing For deeper wounds a variety of wound dressings have been developed including cell cultured artificial skin These materials are intended to promote healing of skin damaged or removed as a result of skin grafting ulceration burns cancer excision or mechanical trauma

Bionanomaterials for Dental Applications

Mieczyslaw Jurczyk,2012-10-26 This book introduces readers to the structure and characteristics of nanomaterials and their applications in dentistry With currently available implant materials the clinical failure rate varies from a few percent to over 10 percent and new materials are clearly needed Nanomaterials offer the promise of higher strength better bonding less toxicity and enhanced cytocompatibility leading to increased tissue regeneration Mieczyslaw Jurczyk director of the Institute of Materials Science and Engineering at the Poznan University of Technology in Poland has drawn from work in his laboratory and elsewhere in Poland to show that nanomaterials have important biological applications including in the stomatognathic system consisting of mouth jaws and associated structures The book is written from a materials science and medical point of view and has 13 chapters and about 400 pages The book can be divided approximately into three sections the first five chapters introduce nanobiomaterials the next five chapters describe their dental applications and the last chapters describe their biocompatibility Chapter 3 is a compendium on metallic biomaterials such as stainless steel cobalt alloys and titanium alloys bioactive bioresorbable polymers and composites and ceramic biomaterials The top down approach to producing nanomaterials such as high energy ballmilling and severe plastic deformation as well as Feynman s bottom up technique of

building atom by atom are discussed in the next chapter Subsequent chapters discuss each material in depth and point out how new architectures and properties emerge at the nanoscale Chapter 8 is devoted to shape memory materials which now include not only NiTi but also polymers and magnetic materials In order to improve bonding nanomaterials can be used to synthesize implants with surface roughness similar to that of natural tissues Chapter 9 is devoted to different surface treatments for Ti based nanomaterials such as anodic oxidation to improve the bioactivity of titanium and improve the corrosion resistance of porous titanium and its alloys The use of carbon in various forms nanoparticles nanofibers nanotubes and thin films is discussed next with emphasis on the microstructure and properties of these materials their implant applications and their interaction with subcutaneous tissues Nanomaterials can be used in preventive dentistry and therefore can reduce the amount of dental treatment that is necessary to maintain a healthy mouth as argued in chapter 11 In a subsequent chapter the author explains osseointegration direct bone to metal interface from a biological point of view and early tissue response The mechanism of the interaction between the implanted materials with the cellular protein in the tissues is described The last chapter discusses the application of new nanostructured materials in permanent and bioresorbable implants nanosurface dental implants and nanostructured dental composite restorative materials This book not only focuses on nanomaterials but also on nanoengineering to achieve the best results in dentistry It is recommended to anyone interested in nanomaterials and their applications in dental science People with a background in materials chemistry physics and biology will benefit from it
