Csaszar, 2016-04-19 Molecular structure is the most basic information about a substance determining most of its properties Determination of accurate structures is hampered in that every method applies its own definition of structure and thus results from different sources can yield significantly different results Sophisticated protocols exist to account for these **Molecular Structure and Spectroscopy** Section on Physical Chemistry (INTERNATIONAL UNION OF PURE AND APPLIED CHEMISTRY). Nonlinear Spectroscopy for Molecular Structure Determination Robert W. Field, 1998 A large variety of nonlinear spectroscopic methods have so far been developed and applied to studies of molecular structure and dynamics Some of these methods utilize complex techniques making it difficult to understand the underlying principles Furthermore most of these methods are referred to by nicknames or acronyms which keeps them shrouded in mystery for most non specialists who are thereby discouraged from mastering and applying the methods to molecular systems Under these circumstances it was judged appropriate and timely to overview those nonlinear spectroscopic methods which are currently particularly useful for studies of molecular structure and dynamics Thus the Commission on Molecular Structure and Spectroscopy of the International Union of Pure and Applied Chemistry decided to publish a book intended to provide an introduction to nonlinear spectroscopy for non specialists *Introductory Group Theory* John R. Ferraro, Joseph S. Ziomek, 2013-11-09 This volume is a consequence of a series of seminars presented by the authors at the Infrared Spectroscopy Institute Canisius College Buffalo New York over the last nine years Many participants on an intermediate level lacked a sufficient background in mathematics and quantum mechanics and it became evident that a non mathematical or nearly nonmathematical approach would be necessary The lectures were designed to fill this need and proved very successful As a result of the interest that was developed in this approach it was decided to write this book The text is intended for scientists and students with only limited theoretical background in spectroscopy but who are sincerely interested in the interpretation of molecular spectra The book develops the detailed selection rules for fundamentals combinations and overtones for molecules in several point groups Detailed procedures used in carrying out the normal coordinate treatment for several molecules are also presented Numerous examples from the literature illustrate the use of group theory in the interpretation of molecular spectra and in the determination of molecular structure **Catalog of Books and Reports in the Bureau of Mines Technical Library, Pittsburgh, Pa** United States.
