Speech And Language Advances In Basic Research And Practice Speech Language:

Speech and Language Norman J. Lass, 2014-06-28 Speech and Language Volume 2 Advances in Basic Research and Practice is a compendium of papers that discusses the processes and pathologies of speech and language such as functional articulation disorders lexical development and a group therapy for treating stuttering Some papers deal with vocal fold vibrations childhood homonymy framework for conversational speech behaviors and vibrotactile testing One paper cites studies of Hersen and Barlow 1976 that treatments warrant consideration only if these are powerful enough to effect obvious gains and of Gilbert McPeck and Mosteller 1977 that treatment research is more likely to give modest than substantial gains the degree of gains which can also be difficult to detect Another paper examines suggestions for teaching words to language disordered children that when knowledge of normal language processes is applied in training approaches effective and individualized programs will follow Used in the treatment of stuttering the Shaping Group which employs action and many other treatment models shows that its approach is effective Another paper notes that before a surgical correction of voice disorders is undertaken the importance of knowing the possible effects of various procedures on the voice should first be known The compendium is well suited for linguists ethnologists psychologists speech therapists and researchers whose works involve linguistics learning communications corrective surgery and syntax *The Management of Voice Disorders* M. D. Morrison, Hamish Nichol, Linda Rammage, 2013-11-11 There has been a tremendous growth of interest in the human voice and its disorders during the past decade This has led to the development of a variety of voice labs or voice clinics that are able to offer unique interdisciplinary assessment and treatment facilities To cover all the bases the voice care team requires input from laryngology speech language pathology psychiatry neurology voice science music pedagogy biomedical engineering and other peripheral fields Because of the multidisciplinary nature of voice clinics there have been a number of books written that address our subject from different professional perspectives These tend to be multi authored works that draw on expertise from around the world such as a laryngologist from New York a speech pathologist from Toronto etc All are colleagues that share similar interests but never actually share the management problems of the same patients This book has been planned and written by the members of a single voice clinic It is our hope that it will reflect a singleness of direction and purpose in the way it presents our approach to a complex topic Because of our regular interactive meetings over problem patients in which we debate the meaning of our observations the evolution of etiological classification systems and the rationale for particular therapy approaches we feel that we have become a team that is greater than the sum of its parts and that there is value in sharing our cumulative thoughts with others This is not simply a laryngology text for laryngologists

Textbook of Developmental Pediatrics Marvin I. Gottlieb, Janice E. Williams, 2013-11-11 Child adolescent development and behavior have been a traditional concern of primary health care providers However it was not until the mid 1960s that attempts were made to consolidate developmental behavioral issues into an identifiably distinct fund of medical knowledge During the ensuing two decades developmental behavioral pediatrics was recognized as a clinical and research subspecialty within the framework of comprehensive health care for children The influence of public advocacy groups topic dedicated journals national professional specialty societies subject related continuing education programs and federal legislation PL94-142 has served to crystallize developmental behavioral pediatrics as a specialized field of study As a consequence during the past ten years significant modifications have restructured medical student and pediatric resident education providing an emphasis on developmental behavioral issues The focus on neurodevelopmental educational and psychosocial issues reflects changing priorities in traditional health care for children The postgraduate training of pediatric fellows in two and three year training programs was initiated to accommodate professional manpower needs in both academic and practice settings Many of the problems in childhood

development and behavior frequently span the traditional areas of child neurology child psychiatry and general pediatrics As a result there has been some confusion in demarcating professional responsibilities in diagnosis and management as well as poorly defined terminology and classification schemas With the birth of developmental pediatrics as a pediatric specialty a more cohesive fund of knowledge has been accumulated and more meaningful strategies have been designed for prevention diagnosis and management
