The Mind Christiaan D. Van Der Velde, 2011-02-10 Even though dramatic advances in neuroscience and brain imaging technologies have provided indisputable evidence of the fundamental role of the brain in mental events the exact nature of that role leaves much to be clarified On the one hand research now strongly indicates that the cognitive content what we know of any mental experience or activity is the result of specific brain functions On the other hand the sense of knowing of having experienced previously continues to be an unresolved mystery As yet no primary brain function suggests that this sense has a cerebral origin In this ambitious and deeply thoughtful work psychiatrist Christiaan D van der Velde argues that our sense of knowing may be an epiphenomenon of cerebrally produced internal images This sense is a reflection of the binary logical structure of cognition by means of which the brain orders all experience in paired opposites such as night and day good and bad sweet and sour etc Just as these dialectical notions are inextricably linked in our mental structure so too says van der Velde are the dual processes that make up cognition When the brain actuates the cognitive content of any particular experience that process automatically calls up the sense of understanding that content as known Using this concept of cognition as a basis van der Velde goes on to show its implications for such complex cerebral functions as memory language dreaming body images the formation of personality and the encounter of the self with others He also discusses the challenges of psychopathology and psychotherapy This cogent incisive analysis by a leading psychotherapist and researcher in cognition provides much to ponder and many insights into the nature of the brain Christiaan D van der Velde M D Farmington CT is Clinical Professor of Psychiatry at the University of Connecticut Health Center who has published widely in numerous professional journals including Nature American Journal of Psychiatry Journal of Clinical Psychiatry among others
