Third Series Library of Congress. Copyright Office,1974 **Atoms In Electromagnetic Fields (2nd Edition)** Claude Cohen-tannoudji,2004-11-25 The production quality is very high even the smallest symbols are easily readable and some papers are reproduced in color The clarity of the exposition the wide range of topics and the logic of the presentation make this a valuable teaching reference This book is highly recommended for physicists and students working on atoms in intense laser fields laser cooling and trapping and Bose Einstein condensation Optics Photonics NewsThis invaluable book presents papers written during the last 40 years by Claude Cohen Tannoudji and his collaborators on various physical effects which can be observed on atoms interacting with electromagnetic fields It consists of a personal selection of review papers lectures given at schools as well as original experimental and theoretical papers Emphasis is placed on physical mechanisms and on general approaches such as the dressed atom approach having a wide range of applications Various topics are discussed such as atoms in intense laser fields photon correlations quantum jumps radiative corrections laser cooling and trapping Bose Einstein condensation In this new edition about 200 page of new material has been added **Experimental and Theoretical Investigations of the Physical Processes Related to the Retention Capability of a Double Screen Element against Liquid Hydrogen in Earth's Gravity and in Microgravity with Respect to the Applied Stimuli** André Pingel,2022-08-04 Metal screens are commonly used as components for fluid handling in spacecraft and rocket tank designs In most cases the screens perform a passive separation of the propellant phases The separation of the liquid from the gaseous propellant phase is a special challenge Liquid gas phase separation means that the gaseous phase is allowed to enter a phase separation device while the liquid phase is blocked The technical application of this process is the depressurization in a propellant tank A certain amount of the gaseous propellant phase is vented from the tank through the gas port The liquid propellant phase remains in the tank in order to be stored for the engine However if the tank causes a liquid movement during the depressurization a part of the liquid can potentially enter the gas port In order to prevent the unwanted liquid outflow a separation of the liquid from the gas is necessary This is possible with the aid of a double screen element and has already been performed for storable liquids in Earth s gravity and microgravity as well as for cryogenic liquids in Earth s gravity At the current state of the art the

separation of the liquid from the gaseous phase of the cryogenic propellant hydrogen using a double screen element has not been performed in microgravity. However, with regard to a possible application, it is mandatory to investigate the function of the double screen element for the real propellant under relevant environmental conditions. In this work, a cryogenic test facility has been developed and operated successfully under Earth's gravity and microgravity conditions using the drop tower at the University of Bremen. Hereby, the original cryogenic propellant phases liquid and gaseous hydrogen have been used. The experiments show the appearance of the physical processes which are related to the retention capability of a double screen element against liquid hydrogen. Furthermore, these physical processes can obviously be influenced by an unknown boundary condition at the screens, the screen saturation. This unknown boundary condition in turn can obviously be influenced by a certain stimulus which causes a special fluid mechanical process. A simplified mathematical and two numerical models have been developed which combine the observed physical processes in the experiments. Two fitting parameters are introduced which influence the flow through screen pressure loss of the liquid and the gaseous hydrogen phase. After the fitting to experimental data, the two fitting parameters have been interpreted with respect to a possible screen saturation. The results lead to a prediction of the unknown boundary condition and indicate that a partial saturation of the screens with liquid could be present in each considered experiment. This can possibly lead to a major influence of the overall resistance of the double screen element against liquid hydrogen.

Quantum Statistics in Optics and Solid-State Physics R. Graham, F. Haake, 2006-04-11 *Analele științifice ale Universității "Al. I. Cuza" din Iași*, 1973 From Microstructure Investigations to Multiscale Modeling Delphine Brancherie, Pierre Feissel, Salima Bouvier, Adnan Ibrahimbegovic, 2017-11-30

Mechanical behaviors of materials are highly influenced by their architectures and/or microstructures. Hence, progress in material science involves understanding and modeling the link between the microstructure and the material behavior at different scales. This book gathers contributions from eminent researchers in the field of computational and experimental material modeling. It presents advanced experimental techniques to acquire the microstructure features together with dedicated numerical and analytical tools to take into account the randomness of the microstructure.
