Spun By The Moon:

The Moon David Whitehouse, 2016-04-07 In *The Moon* David Whitehouse explains how our nearest celestial neighbor was created and what moonrocks tell us of its earth shattering origins and how its existence may have been a crucial factor in mankind being here at all Whitehouse discusses how man has related to it worshipped it and blamed it for his own lunacy though can it really affect our behavior He tells how the first person to look at the moon through a telescope was not Galileo as is commonly believed but an Englishman who knew Shakespeare and had a part in the Gunpowder Plot While some of the story of the modern moon race may be known the first moon race to map its surface has not been charted before and is one of the most dramatic and unexpected stories in science The recent discovery of ice hidden in the moon's polar regions opens up new possibilities for space travel that mean it is essential that mankind returns there if we are ever to journey to the rest of the solar system

Observing the Moon Peter T. Wlasuk, 2013-04-17 Why write another guide to observing the Moon That was the question I was pondering as I began this project having a fine collection of classic lunar guidebooks dating back to 1791 in my own library As a Fellow of the Royal Astronomical Society RAS member of the American Astronomical Society's Division for Planetary Sciences AAS DPS and member of the American Geophysical Union AGU I am fortunate to know many professional lunar scientists who keep me up to date with developments in lunar science contrary to public perception lunar science has definitely not stagnated since the last Apollo No 17 left the surface of the Moon in December 1972 I am also lucky to know many amateur lunar observers who like me enjoy actually looking at the Moon with telescopes and imaging it with a wide variety of devices ranging from regular 35 mm cameras to video recorders and CCD cameras My friends who study the Moon whether in their professions or just for fun gave me several reasons for doing another lunar guidebook First the last lunar observer's guide of any length was published over ten years ago and many reviewers noted that it was badly out of date even then

Catalyst 3 Red Student Book Carol Chapman, Moira Sheehan, Martin Stirrup, Mark Winterbottom, 2004-06-08 The parallel higher level Red books in the Catalyst series use the same format as the Green books This text also includes hands on activities summaries and in text questions to help pupils consolidate their knowledge

Mosaic, 1981 The Outline of Knowledge: The romance of evolution, by F. H. Martens James Albert Richards, 1924

The Science of Spin Roland Ennos, 2024-07-09 What exactly made the earth round How do boomerangs turn around mid air And why do cats always land on their feet A basic scientific concept receives long overdue attention Kirkus Reviews in this fascinating Wall Street Journal new book from the masterful author of *The Age of Wood* From the solar system to spinning tops hurricanes to hula hoops power plants to pendulums one mysterious force shapes almost every aspect of our lives spin Despite its ubiquity rotational force continues to baffle and surprise and few people realize how it makes our planet habitable or how it has been tamed by engineers to make our lives more comfortable Charting the development of engineering and technology from the earliest prehistoric drills to the gas turbine critically acclaimed author and scientist

Roland Ennos presents a riveting account of human ingenuity and the seemingly infinite ways spin affects our daily lives. He also shows how this new approach not only helps us better understand the world but also ourselves. After all, even our own bodies are complex systems of rotating joints and levers. Artfully moving between astrophysics and anthropology, *The Science of Spin* shows how whether natural or engineered spin is really what makes the world go round. **Catalyst 3 Green Student Book** Carol Chapman, Moira Sheehan, Martin Stirrup, Mark Winterbottom, 2004-06-08. The Green books in the Catalyst series are designed to motivate lower ability students. This text also includes hands-on activities and thought-provoking plenaries. **Celestial Delights** Francis Reddy, 2011-11-12. Celestial Delights is essentially a TV Guide for the sky. This will be its third edition. This title, which has aggregated sales of about 20,000 copies to date in its two previous editions and has found a niche with skygazers, is much awaited. Through extensive graphics integrated with an eight-year-long calendar of sky events, it provides a look at don't miss sky events, mostly for naked eye and binocular observing. The book is organized by ease of observation: lunar phases and the brighter planets come first, while solar eclipses, the aurora, and comets come later. Celestial Delights also includes a hefty dose of sky lore, astronomical history, and clear overviews of current science. It provides a handy reference to upcoming naked eye events with information broken out in clear and simple diagrams and tables that are cross-referenced against a detailed almanac for each year covered. Most broad-ranging astronomy field guides focus on stars, constellations, and the deep sky but tend to ignore planetary events, which are by far the most widely observable aspects of the changing night sky. Celestial Delights puts a variety of information all in one place, presents it in a friendly way that does not require prior in-depth astronomical knowledge, but provides the context and historical background for understanding events that astronomical computer programs or web sites lack. *Marvels of Science* Kendall Haven, 1994-04-15. These 50 tales take just minutes to read but amply illustrate scientific principles and the evolution of science through history. Discussion questions and additional references are included, and stories are cross-indexed by year of occurrence and by scientist. Focusing on the characters, events, and moments of genius that comprise the story of science, these 50 short reads are ideal for both read-alouds and reading assignments. The tales take just minutes to read but amply illustrate scientific principles and the evolution of science through history. Discussion questions and additional references correlate each story with elements of the science curriculum and provide direction for students to pursue their own discoveries. Stories are cross-indexed by year of occurrence and by scientist. **(Pocket Ed. of Selected Works)**. Gilbert Parker, 1926.
