

Functional programming: LISP

- Originally developed for symbolic computing
- First interactive, interpreted language
- Dynamic typing: values have types, variables do not
- Garbage-collected
- **Homogeneity of program and data**
- Extensible: multiple dialects, implementations.
Convenient testbed for language design experiments

Symbolic Computing with Lisp Robert D. Cameron, Anthony H. Dixon, 1992 **Symbolic Computing with LISP and PROLOG** Robert A. Mueller, Rex L. Page, 1988-11-25 A practical introduction to symbolic computing and denotational programming First part of the book covers programming Second part addresses symbolic computing in such areas as game playing language translation and theorem proving For each topic there are example problems with proposed solutions followed by working programs using the techniques presented earlier in the text Two programs using a denotational approach accompany each of the applications in symbolic computing one in Lisp and one in Prolog **Symbolic Computing** Nils M. Holm, 2005-01 Symbolic Computing covers various fundamentals of computing science in terms of purely symbolic LISP Topics include for example functions recursion sorting backtracking parsing arbitrary precision arithmetics formal semantics and scoping strategies Pure LISP is an elegant flexible and powerful mathematical system and programming language It shares a lot of properties with modern dialects of LISP such as Common Lisp and Scheme **Common LISP** David S. Touretzky, 2013-02-01 This highly accessible treatment introduces the artificial intelligence programming language known as Lisp Geared toward both experienced programmers and those unfamiliar with the language the text features a toolkit in each chapter Reader friendly explanations of common Lisp programming and debugging tools include DESCRIBE INSPECT TRACE and STEP Numerous examples exercises and diagrams Reprint of the Benjamin Cummings Publishing Company Redwood City California 1990 edition **Lisp and Symbolic Computation**, 1995 **Advanced LISP Technology** Taiichi Yuasa, Hiroshi G. Okuno, 2002-05-09 Developments in Lisp technology have been accelerated by a number of factors including the increased interest in Artificial Intelligence and the emergence of Common Lisp Advanced Lisp Technology the fourth volume in the Advanced Information Processing Technology series brings together various Japanese researchers working in the field of Lisp **LISP** David S. Kowalik, 2012-12-06 It has been widely recognized that artificial intelligence computations offer large potential for distributed and parallel processing Unfortunately not much is known about designing parallel AI algorithms and efficient easy to use parallel computer architectures for AI applications The field of parallel computation and computers for AI is in its infancy but some significant ideas have appeared and initial practical experience has become available The purpose of this book has been to collect in one volume contributions from several leading researchers and pioneers of AI that represent a sample of these ideas and experiences This sample does not include all schools of thought nor contributions from all leading researchers but it covers a relatively wide variety of views and topics and in this sense can be helpful in assessing the state of the art We hope

that the book will serve at least as a pointer to more specialized literature and that it will stimulate interest in the area of parallel AI processing It has been a great pleasure and a privilege to cooperate with all contributors to this volume They have my warmest thanks and gratitude Mrs Birgitta Knapp has assisted me in the editorial task and demonstrated a great deal of skill and patience Janusz S Kowalik vii INTRODUCTION Artificial intelligence AI computer programs can be very time consuming *Languages and Compilers for Parallel Computing* Utpal Banerjee, David Gelernter, Alex Nicolau, David A. Padua, 1992 This volume contains the proceedings of the Fourth Workshop on Languages and Compilers for Parallel Computing held in Santa Clara California in August 1991 The purpose of the workshop held every year since 1988 is to bring together the leading researchers on parallel programming language design and compilation techniques for parallel computers The papers in this book cover several important topics including 1 languages and structures to represent programs internally in the compiler 2 techniques to analyze and manipulate sequential loops in order to generate a parallel version 3 techniques to detect and extract fine grain parallelism 4 scheduling and memory management issues in automatically generated parallel programs 5 parallel programming language designs and 6 compilation of explicitly parallel programs Together the papers give a good overview of the research projects underway in 1991 in this field Proceedings of the 1992 ACM Conference on LISP and Functional Programming Association for Computing Machinery, 1992 *Mathematical Aspects of Scientific Software* J.R. Rice, 2012-12-06 Since scientific software is the fuel that drives today's computers to solve a vast range of problems huge efforts are being put into the development of new software systems and algorithms for scientific problem solving This book explores how scientific software impacts the structure of mathematics how it creates new subfields and how new classes of mathematical problems arise The focus is on five topics where the impact is currently being felt and where important new challenges exist namely the new subfield of parallel and geometric computations the emergence of symbolic computation systems into general use the potential emergence of new high level mathematical systems and the crucial question of how to measure the performance of mathematical problem solving tools Parallel Symbolic Computing: Languages, Systems, and Applications Robert H. Halstead, Takayasu Ito, 1993-11-03 Parallel and distributed computing are becoming increasingly important as cost effective ways to achieve high computational performance Symbolic computations are notable for their use of irregular data structures and hence parallel symbolic computing has its own distinctive set of technical challenges The papers in this book are based on presentations made at a workshop at MIT in October 1992 They present results in a wide range of areas including speculative computation scheduling techniques program development tools and environments programming languages and systems models of concurrency and distribution parallel computer architecture and symbolic applications Molecular Bioinformatics Steffen Schulze-Kremer, 2011-07-20 No detailed description available for Molecular Bioinformatics *Lisp in Small Pieces* Christian Queinnec, 2003-12-04 This is a comprehensive account of the semantics and the implementation of the whole Lisp family of languages namely Lisp Scheme

and related dialects It describes 11 interpreters and 2 compilers including very recent techniques of interpretation and compilation The book is in two parts The first starts from a simple evaluation function and enriches it with multiple name spaces continuations and side effects with commented variants while at the same time the language used to define these features is reduced to a simple lambda calculus Denotational semantics is then naturally introduced The second part focuses more on implementation techniques and discusses precompilation for fast interpretation threaded code or bytecode compilation towards C Some extensions are also described such as dynamic evaluation reflection macros and objects This will become the new standard reference for people wanting to know more about the Lisp family of languages how they work how they are implemented what their variants are and why such variants exist The full code is supplied and also available over the Net A large bibliography is given as well as a considerable number of exercises Thus it may also be used by students to accompany second courses on Lisp or Scheme
