

SPHERES OF THE EARTH

ATMOSPHERE

The atmosphere is the envelope of gases surrounding Earth that extends up to approximately 100,000 km above Earth's surface. The extreme edges of the atmosphere lie about 35,000 km above the surface. Atmospheric density decreases going further away from Earth's surface. Because of this, most 99% of the atmosphere's mass lies within 30 km of Earth's surface.

BIOSPHERE

The biosphere includes both oceanic and terrestrial landforms. On land there are a number of different, easily recognizable communities called biomes. Biomes essentially result from the interaction of regional climates, biotic and abiotic factors, and underlying surfaces, and are usually defined by their climate, vegetation, and animal life.

CRYOSPHERE

Derived from the Greek word *kratos*, meaning "cold", the cryosphere encompasses those parts of the Earth system that are subject to temperatures below 0°C for at least part of the year. Its largest components, by far, are the ice sheets in Greenland and Antarctica, but the cryosphere also includes the Arctic Ocean's sea ice, the glaciers, snow, rivers and lakes ice, frozen ground,

GEOSPHERE

The geosphere is the outer, rigid shell of the solid Earth. It is composed of the entire crust (continental and oceanic) and the top rigid portion of the mantle lying above the partially molten, less rigid asthenosphere. Seismic wave propagation plane motion relative to one another over the asthenosphere, the geosphere consists of rocks broken by discontinuous surface stresses of sediment and soil.

HYDROSPHERE

The hydrosphere consists of all the water girding Earth, whether in the gas, liquid or solid. About 97% of the water in the oceans. The remainder is found in the ice sheets of Greenland and Antarctica (2%), and in freshwater lakes, rivers, ground water below the surface, and water vapor in the atmosphere (2%).
