SYMPOSIUM ON SEED PROTEINS, LOS ANGELES, 28 MARCH - 2 APRIL 1971 G.E. INGLETT, 1972 *Seed Proteins* W. Gottschalk, H.P. Müller, 2012-12-06 Investigations on seed proteins have been intensively carried out during the past two decades This is valid with regard to both their chemical composition as well as their nutritive value The development of new biochemical and physical methods has resulted in obtaining deep insights into the structures of seed proteins and their mutual interactions Intensive exchange of information between the scientists participating in national and international research programmes has given strong impulses for intensifying the research in this field For the quantitative and qualitative investigations of seed proteins not only some model plants were used on the contrary they were carried out on a large number of different crops important for different regions of the earth In this way a level of knowledge has been reached which could not be expected in this diversity within such a short period This holds not only true for biochemical but also for physiological characters of the species of the limiting amino acids studied With regard to nutritional aspects the problem was of special interest but also seed proteins acting as antinutritional factors were analysed in detail Based on the knowledge of seed protein structures it was possible to perform investigations on the genetic basis of their synthesis This was done under two different aspects The basic knowledge on the genes involved should be widened moreover it should be tried to improve the seed proteins quantitatively and qualitatively under the influence of mutant genes *Genetics of Seed Proteins*,

Norton, 2013-10-22 Plant Proteins is a compendium of papers discussing in general plant proteins as materials for human foods and in particular the properties biosynthesis deposition of reserves in seeds undesirable factors production and

nutritional aspects of plant proteins in the food industry Some papers review the properties and biosynthesis of plant proteins the synthesis of chloroplast proteins and legume seed proteins Other papers discuss the development of protein reserves in seeds as well as the toxicity and antagonistic actions in relation to amino acid and protein synthesis One paper examines the world supply and demand for sources of protein from three plant sources namely cereals oilseeds and legumes Another paper discusses the capabilities of certain species of micro organisms to synthesize from a few simple raw materials all the main components needed in the diet of a human or a farm animal One paper notes that the acceptance of plant protein foods in society depends on their presentation flavor texture appearance identity and product name This compendium will benefit agronomists agriculturists biochemists microbiologists nutritionists botanists chemists economists food scientists physicists and plant breeders **Proceedings - National Conference on Wheat Utilization Research..** ,1969

Inglett,1972 *Nutritional Improvement of Food and Feed Proteins* Mendel Friedman,2013-03-09 The nutritional quality of a protein depends on the proportion of its amino acids especially the essential amino acids their physiological availability and the specific requirements of the consumer Availability varies and depends on protein source interaction with other dietary components and the consumer s age and physiological state In many foods especially those from plants low levels of various essential amino acids limits their nutritive value This is particularly important for cereals which may be inadequate in the essential amino acids isoleucine lysine threonine and tryptophan and legumes which are often poor sources of methionine Moreover these commodities are principle sources of protein for much of the earth s rapidly growing population At the current annual growth rate of about 2 percent the world population of about 4 billion will increase to 6.5 billion by the year 2000 and to 17 billion by the year 2050 Five hundred million people are presently estimated to suffer protein malnutrition with about fifteen thousand daily deaths The ratio of malnourished to adequately nourished will almost surely increase For these reasons and especially in view of the limited availability of high quality largely animal protein to feed present and future populations improvement of food and feed quality is especially important Catalog.
