*Resources in Education*, 1989     Silver Strand Training Complex, 2011     **The Oxford Handbook of Music Education, Volume 2**

Gary McPherson, Graham Welch, 2012-07-15

Music education takes place in many contexts, both formal and informal. Be it in a school or music studio, while making music with friends or family, or even while travelling in a car, walking through a shopping mall, or watching television, our myriad sonic experiences accumulate from the earliest months of life to foster our facility for making sense of the sound worlds in which we live. The Oxford Handbook of Music Education offers a comprehensive overview of the many facets of musical experience, behavior, and development in relation to this diverse variety of contexts. While the first volume primarily focuses on children during school age years, this second collects an international list of contributors to explore how music learning takes place outside of the traditional classroom environment. Discussing a range of issues such as music education for the special needs population, music learning in adulthood, and music learning through media and technology, these chapters help to broaden conceptions of music and musical involvement. Whether they are used individually or in tandem, the two volumes of The Oxford Handbook of Music Education update and redefine the discipline and show how individuals across the world learn, enjoy, and share the power and uniqueness of music.

**Constructing Urban Space with Sounds and Music** Ricciarda Belgiojoso, 2016-05-23

While we are used to looking around us, we are less used to listening to what happens around us. And yet the noises we produce reveal our way of life and learning to master

them is a necessity This book aims at drawing the reader's attention to the sound of the urban environment The topic is by its very nature complex as it involves sounds and noises urban space and social activities Using an interdisciplinary approach it examines a heterogeneous selection of experimentations from the domains of music art and architecture Significant case studies of pieces of music public art works and scientific research in the field of urban planning are analyzed investigating the methods that have been adopted and the aural processes that have been generated It then uses the findings to reconstruct the underlying theories and practices and to show what might be drawn from these procedures applied to urban planning The overall objective is to learn to build and enrich space with sound arguing that there is a need to reconsider architecture and urban planning beyond building and to look to the world of the arts and other disciplines In doing so the book guides the reader toward a sensorial architecture and more generally toward consciously creating environmental architecture which is sustainable and connects with art and which diffuses a culture of sound
