**Igneous Rocks of South-West England** P.A. Floyd,C.S. Exley,M.T. Styles,1993-01-31 This volume illustrates some of the significant aspects of magmatic activity from Devonian 408 million years ago to early Permian 270 million years ago times in SW England This period covers the progressive development of the Variscan mountain building episode from initial basin formation to final deformation and the subsequent development of a fold mountain belt the Variscan Orogen Both extrusive volcanic and intrusive plutonic rocks are found in the orogen and chart the various stages of its magmatic development The sites described in this volume are key localities selected for conservation because they are representative of the magmatic history of the orogen from initiation to stabilization Some of the earliest volcanic activity in the Devonian is represented by submarine basaltic and rhyolitic lavas developed in subsiding basins caused by the attenuation of the existing continental crust In some cases extensive rifting and attendant magmatism produced narrow zones of true oceanic crust whereas elsewhere basaltic volcanism is related to fractures in the continental crust at the margins of the basins After the filling of the sedimentary basins and their deformation caused by crustal shortening late Carboniferous Period further activity is manifested by the emplacement of the Cornubian granites and later minor basaltic volcanism in the early Permian Accounts of the constituent parts of this history have enriched geological literature from the nineteenth century onwards and have contributed to the advancement and understanding of magmatic and tectonic processes

**The Atlantic Iron Age** Jon Henderson,2007-12-01 It may be surprising to learn that this book is the first ever survey of the Atlantic Iron Age this tradition is cited in archaeology frequently enough to seem firmly established yet has never been clearly defined With this book Jon Henderson provides an important and much needed exploration of the archaeology of western areas of Britain Ireland France and Spain to consider how far Atlantic Iron Age communities were in contact with each other By examining the evidence for settlement and maritime trade as well as aspects of the material culture of each area Henderson identifies distinct Atlantic social identities through time He also pinpoints areas of similarity the possibility of cultural cross pollination caused by maritime links and to what extent these contacts influenced and altered the distinctive character of local communities A major theme running through the book is the role of the Atlantic seaboard itself and what impact this unique environment had on the ways Atlantic communities perceived themselves and their place in the world As a history of these communities unfolds a general archaeological Atlantic identity breaks down into a range of regional identities which compare interestingly with each other and with traditional models of Celtic identity Bringing together the Iron Age settlement evidence for the Atlantic regions in one place for the first time this excellent and original book is certain to establish itself as the definitive study of the Atlantic Iron Age
