Southern Rockies Wildlands Network Vision A Sciencebased Approach To Rewilding The Southern Rockies

Patrick Randolph Huber

Southern Rockies Wildlands Network Vision A Sciencebased Approach To Rewilding The Southern Rockies:

Southern Rockies Wildlands Network Vision Southern Rockies Ecosystem Project, Wildlands Project, Denver Zoo, 2003

World renowned for their striking beauty and high mountain topography the Southern Rockies are one of North America's gems. The Southern Rockies Ecoregion contains a diversity of life. From alpine tundra to ponderosa pine forests and sagebrush grasslands over 500 vertebrate species find their home in the Southern Rockies as well as a rich variety of plants and invertebrates including over 270 species of butterflies and 5 200 species of moths. It is able to obtain this abundance partially because of its continuous stretches of wild remote and undeveloped lands. And yet this biodiversity is threatened as are many wild places in North America due to human expansion and development: native species have been extirpated, old growth forests logged, wild and powerful rivers dammed and polluted, and land degraded. The Southern Rockies Wildlands Network Vision calls for ecological restoration that is based on healing these ecological wounds. The Vision identifies these wounds to the land and then considers anthropogenic causes for each, addressing not only the symptoms and the disease but also the root causes of the illness. The injuries to the Southern Rockies that have been identified by the Vision include Loss and Decline of Native Species, Loss and Degradation of Terrestrial and Aquatic Ecosystems, Loss and Alteration of Natural Processes, Fragmentation of Wildlife Habitat, Invasion of Exotic Species, Pollution, and Climate Change. The current state of the Southern Rockies indicates that conservation planning and work is imperative. This Vision is a comprehensive look into that work which is based in rewilding. It provides six goals and tangible implementation tactics relating to those goals in order to make the Vision a reality. These goals include protecting and recovering native species and their habitats, reducing pollution, controlling and removing exotic species, maintaining ecological and evolutionary processes, and restoring landscape connectivity. The Vision is a prescription for the future. It recognizes that national parks, wilderness areas, and wildlife refuges have accomplished a great deal for nature. But over time, protected areas have been surrounded by roads and degraded landscapes. Now the protected areas are too isolated to sustain viable populations of large animals, let alone many ecological and evolutionary processes. The Southern Rockies Wildlands Network Vision is a conservation blueprint and collaborative effort of the Southern Rockies Ecosystem Project, the Denver Zoo, and the Wildlands Project for the Southern Rockies of Colorado, Wyoming, and New Mexico.

Routledge Handbook of Rewilding Sally Hawkins, Ian Convery, Steve Carver, Rene Beyers, 2022-11-30. This handbook provides a comprehensive overview of the history, theory, and current practices of rewilding. Rewilding offers a transformational paradigm shift in conservation thinking and as such is increasingly of interest to academics, policymakers, and practitioners. However, as a rapidly emerging area of conservation, the term has often been defined and used in a variety of different ways, both temporally and spatially. There is therefore the need for a comprehensive assessment of this field, and the Routledge Handbook of Rewilding fills this lacuna. The handbook is organised into four sections to reflect key areas of rewilding: theory, practice, and debate; the evolution of rewilding; theoretical and practical

underpinnings applications and impacts and the ethics and philosophy of rewilding Drawing on a range of international case studies the handbook addresses many of the key issues including land acquisition and longer term planning transitioning from restoration human led nature enabled to rewilding nature led human enabled and the role of political and social transformational change Led by an editorial team who have extensive experience researching and practising rewilding this handbook is essential reading for students academics and practitioners interested in rewilding ecological restoration natural resource management and conservation

Mammals of Colorado, Second Edition David M. Armstrong, James P. Fitzgerald, Carron A. Meaney, 2011-05-18 Co published with the Denver Museum of Nature Science Thoroughly revised and updated Mammals of Colorado Second Edition is a comprehensive reference on the nine orders and 128 species of Colorado s recent native fauna detailing each species description habitat distribution population ecology diet and foraging predators and parasites behavior reproduction and development and population status An introductory chapter on Colorado s environments a discussion of the development of the fauna over geologic time and a brief history of human knowledge of Coloradan mammals provide ecological and evolutionary context The most recent records of the state s diverse species rich illustrations including detailed maps skull drawings and photographs and an extensive bibliography make this book a must have reference Amateur and professional naturalists students vertebrate biologists and ecologists as well as those involved in conservation and wildlife management in Colorado will find value in this comprehensive volume

Rewilding North America Dave Foreman, 2004-07 In Rewilding North America Dave Foreman takes on arguably the biggest ecological threat of our time the global extinction crisis He not only explains the problem in clear and powerful terms but also offers a bold hopeful scientifically credible and practically achievable solution Foreman begins by setting out the specific evidence that a mass extinction is happening and analyzes how humans are causing it Adapting Aldo Leopold s idea of ecological wounds he details human impacts on species survival in seven categories including direct killing habitat loss and fragmentation exotic species and climate change Foreman describes recent discoveries in conservation biology that call for wildlands networks instead of isolated protected areas and reviewing the history of protected areas shows how wildlands networks are a logical next step for the conservation movement The final section describes specific approaches for designing such networks based on the work of the Wildlands Project an organization Foreman helped to found and offers concrete and workable reforms for establishing them The author closes with an inspiring and empowering call to action for scientists and activists alike Rewilding North America offers both a vision and a strategy for reconnecting restoring and rewilding the North American continent and is an essential guidebook for anyone concerned with the future of life on earth
