Wolfgang Steinicke,Richard Jakiel,2007-01-04 This book is a unique work satisfying the need for a modern comprehensive review of all major aspects of galaxy observation The book combines the physical background on the nature and data of galaxies the relevant instrumentation and viewing techniques and finally the targets and their individual appearance in telescopes of various apertures A comprehensive sample of galaxies including quasars groups and clusters of galaxies is presented This combination of theoretical knowledge and practical information guarantees successful observing sessions

Furthermore the book is clearly structured with outstanding images and graphics     Morphological and Physical Classification of Galaxies G. Longo,M. Capaccioli,G. Busarello,2012-12-06 The morphological scheme devised by Hubble and followers to classify galaxies has proven over many decades to be quite effective in directing our quest for the fundamental parameters describing the extragalactic manifold This statement is however far more true for spirals than for ellipticals Echoing the concluding remarks in Scott Tremaine's summary talk at the Princeton meeting on Structure and Dynamics of Elliptical Galaxies the Hubble classification of spirals is useful because many properties of spirals gas content spiral arm morphology bulge prominence etc all correlate with Hubble type By contrast almost nothing correlates with the elliptical Hubble sequence E1 to E7 During the last few years much effort has been put into the search for a more meaningful classification of ellipticals than Hubble's Concomitantly forwarded by some provocative conjectures by R. Michard the classical question of whether E galaxies form a physically homogeneous family has been brushed up once more Results of these and other parallel studies look rather promising and point to suture part of the dichotomy between ellipticals and disk galaxies which had become popular in the early eighties owing to dynamical arguments At the same time it appears more and more clear that besides the usual genetic varieties of galaxies products of environmental evolution must also be contemplated in building our modern picture of the reign of galaxies The above considerations prompted us to solicit Prof

Zech,2013-11-11 *Astronomy and Astrophysics Abstracts* aims to present a comprehensive documentation of the literature concerning all aspects of astronomy astrophysics and their border fields It is devoted to the recording summarizing and indexing of the relevant publications throughout the world *Astronomy and Astrophysics Abstracts* is prepared by a special department of the Astronomisches Rechen Institut under the auspices of the International Astronomical Union Volume 43 records literature published in 1987 and received before August 15 1987 Some older documents which we received late and

which are not surveyed in earlier volumes are included too We acknowledge with thanks contributions of our colleagues all over the world We also express our gratitude to all organizations observatories and publishers which provide us with complimentary copies of their publications Starting with Volume 33 all the recording correction and data processing work was done by means of computers The recording was done by our technical staff members Ms Helga Ballmann Ms Beate Gobel Ms Monika Kohl Ms Sylvia Matyssek Ms Doris Schmitz Braunstein Ms Uta Barbara Stegemann Mr Jochen Heidt and Mr Kristopher Polzine supported our task by careful proof reading It is a pleasure to thank them all for their encouragement

Literature 1992, Part 1 Astronomisches Recheninstitut, 2013-11-11 Astronomy and Astrophysics Abstracts appearing twice a year has become one of the fundamental publications in the fields of astronomy astrophysics and neighbouring sciences It is the most important English language abstracting journal in the mentioned branches The abstracts are classified under more than a hundred subject categories thus permitting a quick survey of the whole extended material The AAA is a valuable and important publication for all students and scientists working in the fields of astronomy and related sciences As such it represents a necessary ingredient of any astronomical library all over the world

Galaxy Formation Malcolm Longair, 2007-12-12 Delineating the huge strides taken in cosmology in the past ten years this much anticipated second edition of Malcolm Longair's highly appreciated textbook has been extensively and thoroughly updated It tells the story of modern astrophysical cosmology from the perspective of one of its most important and fundamental problems how did the galaxies come about Longair uses this approach to introduce the whole of what may be called classical cosmology What's more he describes how the study of the origin of galaxies and larger scale structures in the Universe has provided us with direct information about the physics of the very early Universe

*The Westerbork Observatory, Continuing Adventure in Radio Astronomy* Ernst Raimond, René Genée, 2012-12-06 A small country builds a world class telescope in its backyard and lives happily ever after or at least for a quarter century That in a nutshell is the story told in this collection of essays The country of course is the Netherlands and the telescope is the Westerbork Synthesis Radio Telescope WSRT brainchild of Jan Oort Living happily in this context is a continuing record of discovery and as such also a continuing basis for securing observing time on facilities in other countries and operating at other frequencies As our community celebrates the Silver Anniversary of the radio telescope at Westerbork it is fitting that we pause to take account of the scientific discoveries and insights it made possible Initially the instrument represented the very significant step away from university run specialist facilities to a well supported common user radio imager also having spectral and polarization capabilities It pioneered the mode of operation now common for satellite observatories in which data is taken and calibrated by technicians and provided to researchers ready for analysis It has been a major source of discovery in among other areas research on neutral hydrogen

Sparke, John Sill Gallagher, 2000-08-21 This textbook provides a comprehensive and lucid modern introduction to galaxies for advanced undergraduate students in astronomy and physics Basic astrophysics multiwavelength observations and theoretical concepts are carefully combined to develop an integrated understanding All the necessary background astronomy is included and mathematics has been kept to the minimum required to enable the student to quickly grasp the essence of a calculation or the basis for a method The clear and friendly style of the text thorough coverage of fundamentals extensive use of up to date observations and helpful problems make this an ideal introduction to galaxies and thorough preparation for more advanced texts and the research literature

Digitised Optical Sky Surveys H.T. MacGillivray, E.B. Thomson, 2012-12-06 Astronomical photographs contain an enormous amount of information This presents extremely interesting problems when one wishes to produce digitised sky atlases to archive the digitised material to develop sophisticated devices to do the digitising and to create software to process the vast amounts of data All these activities are necessary to be able to do astronomy One such activity is the important large scale optical identification of objects which also emit radiation at other wavelengths Other activities of the past decade include a multiplicity of surveys that have been made on galaxies and clusters of galaxies This book treats in five sections the existing and future surveys their digitisation and their impact on astronomy It is a reference for people in the field and for those who wish to engage in using or producing sky surveys Large Scale Structure: Tracks And Traces - Proceedings Of 12th Potsdam Cosmology Workshop Volker Muller, Stefan Gottlober, Jan P Mucket, Joachim Wambsganss, 1998-08-08 Understanding the largest physical structures in the universe is essential for the comprehension of the cosmos as a whole We want to know how our world is formed what it is made of and how it evolves Galaxies as the most visible constituents of the universe are interesting probes for the cosmic time sequence Their formation and development provides us with unique clues to the cosmic evolution This is tightly connected with the hierarchical cosmic structure groups and clusters of galaxies and their embedding into the large scale structure offer the opportunity to study the dependencies Galaxy redshift surveys delineate most impressively a large cosmic web which is composed of sheets and filaments Grand simulations of the cosmic evolution complement these observations from the theoretical side and allow one quantify and compare various model universes Quasar absorption line studies gravitational lensing and even the X ray background radiation provide important quantitative measures of the history of matter clustering Finally the microwave radiation traces very early structures which are supposed to originate in the phase of inflationary expansion shortly after the big bang This volume constituting the proceedings of the 12th Potsdam Cosmology Workshop deals with the basic aspects of cosmological structure formation on the largest physical scales **The World of Galaxies** Harold G. Corwin, Lucette Bottinelli, 2012-12-06 From 12 April to 14 April 1988 120 of Gerard and Antoinette de Vaucouleurs's friends and colleagues gathered at the Institut d'Astrophysique in Paris to celebrate Gerard's 70th birthday and his remarkable career in Astronomy The gathering also honored the memory of Antoinette who died 29 August 1987 after a long illness and her own no less remarkable career This volume collects the 24 invited review papers and the 60 contributed poster papers presented at the meeting Gerard de Vaucouleurs Gerard de Vaucouleurs was born on 25 April 1918 in Paris where he spent his boyhood He became an active amateur astronomer in the early 1930's making extensive observations of Mars Jupiter and variable stars including the bright supernova of 1937 in IC 4182 He also began life long interests in astronomical photography and galaxy cataloguing during this period In 1939 he met the director of the Paris transport system and an equally avid amateur astronomer Julien Peridier De Vaucouleurs worked at Peridier's private observatory at Le Houga in southwestern France on

and off throughout the next decade His undergraduate work was in mathematics astronomy and experimental physics this combined with his interest in observational astronomy formed his life long empirical approach to science After spending 18 months in the French army early in 1939 41 Gerard returned to the Peridier observatory and then in 1943 to his studies at the Sorbonne where he met Antoinette     Extragalactic Radio Sources R. Ekers,C. Fanti,L. Padrielli,2012-12-06 On the 100th anniversary of Marconi s successful experiment on radio broadcasting 250 astronomers from all over the world met in Bologna Italy for five days to update their knowledge of the physics and statistical properties of powerful extragalactic radio sources Since their discovery in the fifties enormous progress has been made The existence of superluminal motions in the cores of radio sources the presence there of a black hole surrounded by an absorbing dust torus as inferred mostly from studies at other wavelengths are now accepted ideas Nevertheless in spite of these efforts there are many questions still unanswered For instance we do not know which mechanism produces the huge amount of energy supplied to radio sources how the jets connecting the engine to the lobes are formed and collimated which of the differences observed among the various classes of radio sources are apparent and which are real These and other related topics are discussed in this book

*Information & On-Line Data in Astronomy* D Egret,M.A Albrecht,2012-12-06 The ability of storing managing and giving access to the huge quantity of data collected by astronomical observatories is one of the major challenges of modern astronomy At the same time the growing complexity of data systems implies a change of concepts the scientist has to manipulate data as well as information Recent developments of the WorldWideWeb bring interesting answers to these problems The book presents a wide selection of databases archives data centers and information systems Clear and up to date descriptions are included together with their scientific context and motivations Audience This volume provides an essential tool for astronomers librarians data specialists and computer engineers
