Talking Data Transcription And Coding In Discourse Research:

Talking Data Jane A. Edwards, Martin D. Lampert, 2014-02-25 This book presents the reader with a set of diverse carefully developed and clearly specified systems of transcription and coding arising from contrasting theoretical perspectives and presented as alternative choices situated within the theoretical domain most natural to each. The perspectives represented include first and second language acquisition, interethnic and crosscultural interaction, information structure and the study of discourse influences on linguistic expression. In the contributed chapters the designers of these systems provide a distillation of collective experiences from the past quarter century, telling in their own words their perspectives on language processes, how these perspectives have shaped their choice of methodology in transcription and coding of natural language, and describing their systems in detail. Overview chapters by the editors then provide design principles and guidelines concerning issues pertinent to all systems, including such things as reliability, validity, ease of learning, computational tractability, and robustness against error. The final chapter is a compendium of existing computerized archives of language data and information sources, together with details concerning data access and use.

Transcribing Talk and Interaction Christopher Joseph Jenks, 2011-08-31 Interest in transcript based research has grown significantly in recent years. Alongside this growth has been an increase in awareness of the empirical utility of naturalistic research on language use in interaction. However, a quick scan of the literature reveals that very few transcription books have been published in the past three decades. This is an astonishing fact given that there are perhaps hundreds of books published on spoken discourse analysis. This book aims to narrow this gap by providing an introduction to the theories and practices related to transcribing communication data. The book is intended for students with little to no knowledge of transcription work and/or instructors responsible for teaching introductory courses on transcript based research. Readers who are learning or teaching discourse, conversation analysis, or similar analytic methods of investigation will find this book particularly helpful. The author, Christopher Jenks, has many years of experience teaching transcription work and analysis of communication data to postgraduate students and researchers. In addition to running workshops and giving presentations on similar topics at universities around the world, he has published widely in top international journals and has numerous other forthcoming publications.
