

# The Energy Sector and Energy Policy in the Soviet Economy

Before proceeding to our main subject—the examination of Soviet energy technology and its use in efforts to build up Soviet industry in general and the energy sector in particular—we must first consider the general picture of the energy situation in the Soviet Union and some of the major lines of energy policy in the postwar years. This chapter discusses the Soviet energy resources base, some distinctive features of the structure of the supply and demand for energy in the Soviet economy, and the establishment of the overall framework of energy policy. The final section summarizes the energy sector's importance in a socialist or planned economic structure.

## ENERGY RESOURCES

The nature of the Soviet energy resources base has important consequences for Soviet energy policy and for the direction of its efforts in energy R and D. The Soviet Union's energy resources are large enough that it can make the trade-off between use and effort much to its benefit. Even so some of these assets are unique. It is the only large industrial country in that position. But the economic characteristics of its energy resources are not especially attractive, and most of its internal energy choices and the direction of its energy R and D are conditioned by that fact—its quality, transportability, and other economic features of these energy resources. The best way to convey the situation is to describe briefly the major components of the energy resources base.

### Coal\*

Soviet authorities like to say that the USSR has more built-up coal resources of the world. This is based on their estimate of 4,000 billion tons of "general-geological" reserves, divided by 3 for reserves and by 10 for recoverable reserves (140 billion tons) and coal and reserves still to be mined.

More important for economic development are the reserves kept by the All-Union Geological Fund of undiscovered and economically given

\*The following discussion is based mostly on statistics given

in the report on reserves in the USSR, comparison of the Soviet reserve situation with the definitions of those categories is rather involved, but the changes in the need to describe reserves sufficiently well required to justify production decisions.

**Soviet Science on the Edge of Reform** Harley D. Balzer,2019-06-04 It is my sincere hope that the reforms currently being introduced in the USSR will render much of this book obsolete Yet even if perestroika brings significant change to the Soviet Union historians will want a record of what existed before After four years it has become apparent that perestroika is a painful long term process In such a large and diverse country even the reforms that are successful cannot take place everywhere at once One major goal in publishing this book is to make data from a major interview project on Soviet science and technology available to a broader audience Despite the changes taking place many of the features illuminated by these unique data persist

*The Environment And Marxism-leninism* Joan Debardeleben, 2019-07-11 In the past two decades environmental pollution and natural resource shortages have evoked increasing concern in the Soviet Union and Eastern Europe The emerging ecological crisis has challenged many common assumptions in the Soviet bloc as in the West This book provides for the first time a detailed and comprehensive analysis of the ecology debate in the USSR and its highly industrialized ally the German Democratic Republic GDR Based on a thorough examination of the Soviet and GDR sources Dr DeBardeleben explores the authorities attempts to explain the problem to their populations She also examines the viewpoints of scientists writers and scholars with special attention to economic dimensions of the ecology debate The study reveals the increasing sophistication of specialists in influencing public policy by adapting official values to support their positions Through comparison of the Soviet and East German cases the study clarifies the impact of natural resource endowment and legitimacy dilemmas on treatment of the ecology issue The book demonstrates that Marxist Leninist values subtly affect Soviet and GDR responses but at the same time the environmental crisis is forcing a reevaluation of some aspects of Marxist Leninist theory and ideology itself
