Systematics Of Anopina Obraztsov University Of California:

Systematics of Anopina Obraztsov (Lepidoptera Tortricidae) John W. Brown, Jerry A. Powell, 2000-06-20 The authors revise the genus Anopina of the leafroller family Tortricidae Lepidoptera This genus ranges from southern Canada to Costa Rica with its greatest species richness in the higher elevations of Mexico The larvae are suspected to be leaf litter feeders Sixty two species are treated of which forty nine are described as new to science The authors provide a hypothesis of phylogenetic relationships of the species propose a classification supply a key to species groups based primarily on features of the genitalia and include illustrations of adults larvae and male and female genitalia *Systematics and Phylogeny of Sparganothina and Related Taxa (Lepidoptera: Tortricidae: Sparganothini)* Bernard Landry, Jerry A. Powell, 2001-08-15 This work provides a hypothesis of evolutionary relationships within the Neotropical genus Sparganothina and between this genus and other lineages of Sparganothini Lepidoptera Tortricidae Nineteen species are considered to belong to Sparganothina Ten additional species are placed in Sparganothina and five in Coelostathma pending a better phylogenetic understanding of Coelostathma and related genera Thirty species are described as new **Species Revision and Generic Systematics of World Rileyinae (Hymenoptera: Eurytomidae)** Michael W. Gates, 2008-06-24 The subfamily Rileyinae Hymenoptera Eurytomidae is redefined to contain 6 genera and 69 species for which keys are provided Two morphological data sets analyzed via maximum parsimony with PAUP yield hypotheses on the placement of Rileyinae within Eurytomidae and internal relationships of Rileyinae Tables detailing host utilization for Eurytomidae genera Rileyinae species and confirmed suspected plant associations for Rileyinae are included *University of California Publications in Entomology* Serguei V. Triapitsyn, 2008 *Moths of Western North America* Jerry A. Powell, Paul A. Opler, 2009-05-27 Insects boast incredible diversity and this book treats an important component of the western insect biota that has not been summarized before moths and their plant relationships There are about 8 000 named species of moths in our region and although most are unnoticed by the public many attract attention when their larvae create economic damage eating holes in woollens infesting stored foods boring into apples damaging crops and garden plants or defoliating forests In contrast to previous North American moth books this volume discusses and illustrates about 25% of the species in every family including the tiny species making this the most comprehensive volume in its field With this approach it provides access to microlepidoptera study for biologists as well as amateur collectors About 2 500 species are described and illustrated including virtually all moths of economic importance summarizing their morphology taxonomy adult behavior larval biology and life cycles **The Lives of Lepidopterists** Lee A. Dyer, Matthew L. Forister, 2015-12-01 Inchworms tiger moths underwings owlet moths silkworms sphinx moths grass moths and butterflies Collectively these and many others are the Lepidoptera one of the most diverse groups of animals on the planet Lepidoptera can be found in the highest tropical canopies the driest deserts and at the leading edge of science The adults include some of the most beautiful insects that have inspired artists and have sailed

through the dreams of human cultures for millennia The immature stages caterpillars like the underwing depicted on the cover link together vital processes in diverse terrestrial ecosystems that are only barely documented let alone understood The people that study these animals are lepidopterists and the goal of this book is to introduce them with their own words In twenty chapters lepidopterists tell their stories and these tales mirror the diversity of nature in their range and depth You will find individuals that wrestle with the challenges of scientific careers stories of far flung travel sand close calls and historical perspectives on recent decades of scientific break throughs

International Advances in the Ecology, Zoogeography, and Systematics of Mayflies and Stoneflies F. R. Hauer, Jack Stanford, Robert Newell, 2008-06-24 The purpose of this volume is to encourage and facilitate focused research and provide a forum for scholarly exchange about the status of Mayfly and Stonefly science Professor John Brittain whose research is focused on freshwater entomology especially egg development and life cycle strategies of Ephemeroptera and Plecoptera presents a chapter reflecting on the quality of mayflies as good indicators of global warming and the quality of streams and lakes Professor Emeritus Andrew Sheldon whose interests have encompassed community and population ecology of aquatic animals over a span of more than 40 years especially insects and fishes explores topics of Scale and Hierarchy and the Ecology of Plecoptera discussing how studies emphasizing scale and perspective reveal importance of stoneflies to ecosystems Other topics cover a broad base of disciplines including morphology physiology phylogeny taxonomy ecology and conservation The chapters have been compiled into three sections for this volume Ecology Zoogeography and Systematics

Phylogenetic Relationships within Heliodinidae and Systematics of Moths Formerly Assigned to Heliodines Stainton (Lepidoptera: Yponomeutoidea) Yu-Feng Hsu, Jerry A. Powell, 2005-01-01 Heliodinids are tiny brightly colored dayflying moths Phylogenetic relationships among genera of Heliodinidae are proposed using parsimony and character compatibility We describe and illustrate 45 North and Central species 25 newly named assigned to five genera two new two exhumed from synonymy Larval host plants are recorded for 33 species 14 newly discovered about 45% of the known fauna 90% of these are specialists on Caryophyllales primarily Nyctaginaceae

An Annotated Catalog of the Type Material of Aphytis (Hymenoptera: Aphelinidae) in the Entomology Research Museum, University of California at Riverside Serguei Triapitsyn, Jung-Wook Kim, 2008-11-18 The catalog provides information on the type of material of 75 valid species of the genus Aphytis Howard Hymenoptera Aphelinidae in the collection of the Entomology Research Museum University of California Riverside 7 390 specimens were remounted from Hoyer s medium into Canada balsam including 309 primary types 2 473 secondary types and 4 608 non type specimens Lectotypes are designated for 11 species

A Taxonomic Revision and Phylogenetic Analysis of the Ant Genus Gnampptogenys Roger in Southeast Asia and Australasia (Hymenoptera: Formicidae: Ponerinae) John E. Lattke, 2004-11-04 Ants belonging to the genus Gnampptogenys are important and diverse predators in the forests of the tropics of the Americas Southeast Asia and Australasia The recent rapid accumulation of these ants in collections rendered the last revision obsolete

raising the number of known species from about 80 to over a 120 species worldwide The present study recognizes 49 Old World species almost half of them new distributed among 5 species groups They are present in many entomological collections as the large size of some species and their conspicuousness has caught the attention of even general collectors They figure increasingly in studies of diversity and ecology due to aspects of their biology such as predatory specialization or their reproduction which includes proper queens in some species and worker reproduction in other species While most species are ground nesters in forests some are arboreal and others are subterranean This revision covers all the Old World species and proposes phylogenetic relations among the different species groups The identification of the species is possible with aid of well illustrated keys for workers and queens The results of working with the keys can be rapidly confirmed by consulting the diagnosis that accompanies each species account or the full description if need be The phylogenetic analysis uses a valuable series of internal morphological characters previously unconsidered in ant systematics Detailed distribution data is also included for each species This work will be valuable for those studying insect diversity and ecology of forests in Southeast Asia and Australasia Their diverse biology and relative large size of many species make these ants attractive subjects for comparative studies and this reference should open the door for further studies California Cuckoo Wasps in the Family Chrysididae (Hymenoptera) Dr. Lynn S. Kimsey, 2006-11-27 California has one of the world's most diverse chrysidid wasp faunas These are large brightly metallic colored parasitoids of sphecoid wasps and bees This study reviews the species and genera of Chrysididae in California maps their overall distributions and gives keys to California genera and species In addition three species described by Linsenmaier in 1994 are synonymized *Proceedings of the Entomological Society of Washington*, 2014 List of members in v 1 3 5 14 *Phylogenetic Relationships, Systematics and Biology of the Species of Amorbia Clemens (Lepidoptera: Tortricidae, Sparganothini)* Eugenie Phillips, 2002 American Entomologist, 2001 *Phylogenetic Systematics Within and Between Species in the Tortricinae Using Classical and Molecular Methods* James John Kruse, 2000 *Systematics of Dorithia Powell (Lepidoptera: Tortricidae) and Phylogenetic Relationships Within the Euliini* John Wesley Brown, 1988 *American Book Publishing Record*, 2000-07 *The British National Bibliography* Arthur James Wells, 2000 □□□□□□□□□□, 2003 *The Zoological Record*, 2001
