NK Cell Subsets in Health and Disease: New Developments Emanuela Marcenaro, Luigi D. Notarangelo, Jordan S. Orange, Eric Vivier, 2017-11-29

Natural Killer NK cells were discovered ca 1975 as the first group of lymphoid cells that were neither T cells nor B cells Since then the dissection of the biology of NK cells has been growing exponentially with many seminal discoveries from the identification of MHC class I specific inhibitory receptors to the discovery of receptor ligand pairs involved in NK cell activation and to the manipulation of NK cells in cancer In this research topic we asked a group of thought leaders in NK cell biology to review recent advances in their origins and biology and their roles in cancer infection and inflammation Together these 25 articles provide a timely survey of NK cells as critical immunologic components of health

and disease They will hopefully prompt further dialogue and developments in basic and translational immunology **CD4+ T cell differentiation in infection: amendments to the Th1/Th2 axiom** Dragana Jankovic, Carl G Feng, 2015-06-03 CD4 T lymphocytes play an essential role in host defense against bacterial parasitic and viral infections During infection under the influence of intrinsic signals received through peptide MHC TCR interactions and extrinsic signals provided by pathogen conditioned dendritic and other accessory cells CD4 T cells proliferate and differentiate into specialized T helper Th effectors which produce distinct sets of cytokines tailored to combat a specific class of microbes The concept of CD4 T cell multifunctionality was developed after the seminal discovery of Th1 and Th2 cells nearly 30 years ago Although the Th1 Th2 paradigm has successfully withstood the test of time in the past decade additional Th subsets Th17 Tfh Th22 Th9 have been identified Similarly single cell analyses of cytokines and master transcriptional factors have revealed that at the population level CD4 T cell responses are far more heterogeneous than initially anticipated While some of the checkpoints in Th cell specification have been identified recent studies of transcriptional and epigenetic regulation have uncovered a significant flexibility during the course CD4 T lymphocyte polarization In addition Th cells expressing cytokines with counteracting functions as a measure of self regulation display yet another level of diversity Understanding the mechanisms that control the balance between stability vs plasticity of Th effectors both at the time of initiation of immune response and during development of CD4 T cell memory is critical for the rational design of better vaccines and new immunotherapeutic strategies This research topic will cover current views on Th cell development with a focus on the mechanisms that govern differentiation function and regulation of effector Th cells in the context of microbial infections **Pediatric Allergy:**
