Tangents And Secants Of Algebraic Varieties:

Tangents and Secants of Algebraic Varieties F. L. Zak, 1993 The book is devoted to geometry of algebraic varieties in projective spaces Among the objects considered in some detail are tangent and secant varieties Gauss maps dual varieties hyperplane sections projections and varieties of small codimension Emphasis is made on the study of interplay between irregular behavior of higher secant varieties and irregular tangencies to the original variety Classification of varieties with unusual tangential properties yields interesting examples many of which arise as orbits of representations of algebraic groups ABSTRACT

Positivity in Algebraic Geometry II R.K. Lazarsfeld, 2017-07-25 This two volume work on Positivity in Algebraic Geometry contains a contemporary account of a body of work in complex algebraic geometry loosely centered around the theme of positivity Topics in Volume I include ample line bundles and linear series on a projective variety the classical theorems of Lefschetz and Bertini and their modern outgrowths vanishing theorems and local positivity Volume II begins with a survey of positivity for vector bundles and moves on to a systematic development of the theory of multiplier ideals and their applications A good deal of this material has not previously appeared in book form and substantial parts are worked out here in detail for the first time At least a third of the book is devoted to concrete examples applications and pointers to further developments Whereas Volume I is more elementary the present Volume II is more at the research level and somewhat more specialized Both volumes are also available as hardcover editions as Vols 48 and 49 in the series *Ergebnisse der Mathematik und ihrer Grenzgebiete*

From Classical to Modern Algebraic Geometry Gianfranco Casnati, Alberto Conte, Letterio Gatto, Livia Giacardi, Marina Marchisio, Alessandro Verra, 2017-04-20 This book commemorates the 150th birthday of Corrado Segre one of the founders of the Italian School of Algebraic Geometry and a crucial figure in the history of Algebraic Geometry It is the outcome of a conference held in Turin Italy One of the book's most unique features is the inclusion of a previously unpublished manuscript by Corrado Segre together with a scientific commentary Representing a prelude to Segre's seminal 1894 contribution on the theory of algebraic curves this manuscript and other important archival sources included in the essays shed new light on the eminent role he played at the international level Including both survey articles and original research papers the book is divided into three parts section one focuses on the implications of Segre's work in a historic light while section two presents new results in his field namely Algebraic Geometry The third part features Segre's unpublished

notebook Sulla Geometria Sugli Enti Algebrici Semplicemente Infiniti 1890 1891 This volume will appeal to scholars in the History of Mathematics as well as to researchers in the current subfields of Algebraic Geometry **Algebraic**

Transformation Groups and Algebraic Varieties Vladimir Leonidovich Popov,2004-04-01 The book covers topics in the theory of algebraic transformation groups and algebraic varieties which are very much at the frontier of mathematical research **Projective Varieties with Unexpected Properties** Ciro Ciliberto,Anthony V. Geramita,Brian Harbourne,Rosa

Maria Miró-Roig,Kristian Ranestad,2008-08-22 This volume contains refereed papers related to the lectures and talks given at a conference held in Siena Italy in June 2004 Also included are research papers that grew out of discussions among the participants and their collaborators All the papers are research papers but some of them also contain expository sections which aim to update the state of the art on the classical subject of special projective varieties and their applications and new trends like phylogenetic algebraic geometry The topic of secant varieties and the classification of defective varieties is central and ubiquitous in this volume Besides the intrinsic interest of the subject it turns out that it is also relevant in other fields of mathematics like expressions of polynomials as sums of powers polynomial interpolation rank tensor computations Bayesian networks algebraic statistics and number theory **Decomposability of Tensors** Luca Chiantini,2019-02-15 This

book is a printed edition of the Special Issue Decomposability of Tensors that was published in Mathematics *Projective Geometry and Formal Geometry* Lucian Badescu,2012-12-06 The aim of this monograph is to introduce the reader to modern methods of projective geometry involving certain techniques of formal geometry Some of these methods are illustrated in the first part through the proofs of a number of results of a rather classical flavor involving in a crucial way the first infinitesimal neighbourhood of a given subvariety in an ambient variety Motivated by the first part in the second formal functions on the formal completion X_Y of X along a closed subvariety Y are studied particularly the extension problem of formal functions to rational functions The formal scheme X_Y introduced to algebraic geometry by Zariski and Grothendieck in the 1950s is an analogue of the concept of a tubular neighbourhood of a submanifold of a complex manifold It is very well suited to study the given embedding $Y \subset X$ The deep relationship of formal geometry with the most important connectivity theorems in algebraic geometry or with complex geometry is also studied Some of the formal methods are illustrated and applied to homogeneous spaces The book contains a lot of results obtained over the last thirty years many of which never appeared in a monograph or textbook It addresses to algebraic geometers as well as to those interested in using methods of algebraic geometry **Commutative Algebra and Its Connections to Geometry** Alberto Corso,Claudia Polini,2011-10-20 This

volume contains papers based on presentations given at the Pan American Advanced Studies Institute PASI on commutative algebra and its connections to geometry which was held August 3 14 2009 at the Universidade Federal de Pernambuco in Olinda Brazil The main goal of the program was to detail recent developments in commutative algebra and interactions with such areas as algebraic geometry combinatorics and computer algebra The articles in this volume concentrate on topics

central to modern commutative algebra the homological conjectures problems in positive and mixed characteristic tight closure and its interaction with birational geometry integral dependence and blowup algebras equisingularity theory Hilbert functions and multiplicities combinatorial commutative algebra Grobner bases and computational algebra
