It is a literature which draws on popular culture and which engages in speculation about science, history, and all types of social relations. This volume brings together essays by scholars and practitioners of science fiction which look at the genre from these different angles. After an introduction to the nature of science fiction, historical chapters trace science fiction from Thomas More to more recent years, including a chapter on film and television. The second section introduces four important critical approaches to science fiction, drawing their theoretical inspiration from Marxism, postmodernism, feminism, and queer theory. The final and largest section of the book looks at various themes and sub-genres of science fiction. A number of well-known science fiction writers contribute to this volume, including Gwyneth Jones, Ken MacLeod, Brian Stableford, Andy Duncan, James Gunn, Joan Slonczewski, and Damien Broderick. Disability in Science Fiction K. Allan, 2015-12-17 In this groundbreaking collection, twelve international scholars with backgrounds in disability studies, English, and world literature classics and history discuss the representation of disability, medical cures, technology, and the body in science fiction. **The Nonhuman in American Literary Naturalism** Karin M. Danielsson, Kenneth K. Brandt, 2023-09-05 *The Nonhuman in American Literary Naturalism* responds to a need to expand and refine the connections among nonhuman studies and American literary naturalism and to productively expand the scholarly discourse surrounding this vital movement in American literary history. This collection focuses on that which becomes visible when the human subject is skirted or moved off center; in other words, the representation of nonhuman animals and other vital or inert species, things, entities, cityscapes, and seascapes that play an important part in American literary naturalism. Informed by animal studies, ecocriticism, posthumanism, new materialism, and other recent theoretical perspectives, the essays in this collection discuss early naturalist texts as well as more recent naturalistic-oriented authors. *Science Fiction Criticism* Rob Latham, 2017-02-23 Including more than 30 essential works of science fiction criticism in a single volume, this is a comprehensive introduction to the study of this enduringly popular genre. *Science Fiction Criticism: An Anthology of Essential Writings* covers such topics as definitions and boundaries of the genre, the many forms of science fiction from time travel to inner space, ideology and identity from utopian fantasy to feminist, queer, and environmental readings, the non-human, androids, aliens, cyborgs, and animals, race and the legacy of colonialism. The volume also features annotated guides to further reading on these topics. Includes writings by Marc Angenot, J. G. Ballard, Damien Broderick, Istvan Csicsery-Ronay, Samuel R. Delany, Philip K. Dick, Grace Dillon, Kodwo Eshun, Carl Freedman, Allison de Fren, Hugo Gernsback, Donna Haraway, N. Katherine Hayles, Robert A. Biological Emergences Robert G. B. Reid, 2009-08-21 A critique of selectionism and the proposal of an alternate theory of emergent evolution that is causally sufficient for evolutionary biology Natural selection is commonly interpreted as the fundamental mechanism of evolution Questions about how selection theory can claim to be the all sufficient explanation of evolution often go unanswered by today's neo Darwinists perhaps for fear that any criticism of the evolutionary paradigm will encourage creationists and proponents of intelligent design In *Biological Emergences* Robert Reid argues that natural selection is not the cause of evolution He writes that the causes of variations which he refers to as natural experiments are independent of natural selection indeed he suggests natural selection may get in the way of evolution Reid proposes an alternative theory to explain how emergent novelties are generated and under what conditions they can overcome the resistance of natural selection He suggests that what causes innovative variation causes evolution and that these phenomena are environmental as well as organismal After an extended critique of selectionism Reid constructs an emergence theory of evolution first examining the evidence in three causal arenas of emergent evolution symbiosis association evolutionary physiology behavior and developmental evolution Based on this evidence of causation he proposes some working hypotheses examining mechanisms and processes common to all three arenas and arrives at a theoretical framework that accounts for generative mechanisms and emergent qualities Without selectionism Reid argues evolutionary innovation can more easily be integrated into a general thesis Finally Reid proposes a biological synthesis of rapid emergent evolutionary phases and the prolonged dynamically stable non evolutionary phases imposed by natural selection
