Investigations of skeletal remains from key archaeological sites reveal new data and offer insights on prehistoric life and health in the Southeast The shift from foraging to farming had important health consequences for prehistoric peoples but variations in health existed within communities that had made this transition This new collection draws on the rich bioarchaeological record of the Southeastern United States to explore variability in health and behavior within the age of agriculture It offers new perspectives on human adaptation to various geographic and cultural landscapes across the entire Southeast from Texas to Virginia and presents new data from both classic and little known sites The contributors question the reliance on simple cause and effect relationships in human health and behavior by addressing such key bioarchaeological issues as disease history and epidemiology dietary composition and sufficiency workload stress patterns of violence mortuary practices and biological consequences of European contact They also advance our understanding of agriculture by showing that uses of maize were more varied than has been previously supposed Representing some of the best work being done today by physical anthropologists this volume provides new insights into human adaptation for both archaeologists and osteologists It attests to the heterogeneous character of Southeastern societies during the late prehistoric and early historic periods while effectively detailing the many factors that have shaped biocultural evolution **Interim Report on**

**Bioarchaeology of European Contact** Dale L. Hutchinson,2006 This is the first systematic analysis of Tatham Mound one of the most important archaeological sites in Central Gulf Coast Florida Because it documents the earliest years of contact between the resident Native Americans of the area and European colonists Tatham Mound has provided archaeologists and bioarchaeologists with a wealth of direct and indirect evidence from the early contact period a rare occurrence in American archaeology Hutchinson examines the skeletal remains of more than 350 burials a few skeletons bearing evidence of trauma from European weapons as well as the European artifacts found within those burials Comparing the bioarchaeological evidence and scientific data with the historic accounts of the early Spanish explorers Hutchinson challenges the long held theory that novel pathogens caused the immediate demographic collapse of native societies at the inception of the European colonial era He argues that long term political social economic and biological changes in addition to introduced epidemic disease all contributed to the decline of Florida s native populations Incorporating numerous maps of the burials from Tatham Mound a large number of photographs of the artifacts interred with them and thorough documentation of the burials with regard to both biology and mortuary practice Hutchinson interweaves archaeological and ethnohistoric evidence to present a complete picture of native and newcomer interaction in the region Hutchinson also places this evidence within a broader historical and scientific context so that it represents a local case study applicable to a very wide geographical area Relevant well beyond Central Gulf Coast Florida this volume will be useful to scholars in the fields of bioarchaeology physical anthropology archaeology history ethnohistory and Native American studies **First Encounters** Jerald T.
