## **Taxing Automobile Emissions For Pollution Control:**

**Taxing Automobile Emissions for Pollution Control** Maureen Sevigny, 1998 This innovative book examines the role an automobile emissions tax could play in reducing emissions in the United States. The author concludes that an emissions tax has the potential to reduce emissions from household vehicles significantly even when travel demand is relatively price inelastic. Beginning with a theoretical discussion of a first best tax, a second best tax on passenger vehicles is developed. This study contains detailed analyses of the design of the tax, behavioural responses that lead to emissions reductions including reductions in the household's vehicle miles of travel and the scrapping of low value high emitting vehicles, the effect of the tax on the reduction of emissions, the effect of the tax on households in different income quintiles, the emissions reducing potential of a gasoline tax compared to an emissions tax. This study uses a simulation model to analyse the sensitivity of travel demand and the resulting emissions to different tax rates and demand elasticities. The author concludes that an emissions tax has the potential to reduce emissions from household vehicles significantly even when travel demand is relatively price inelastic. **Taxing Automobile Emissions for Pollution Control** will prove invaluable to policymakers and academics in the field of environmental management and environmental economics and policy.

**Environmental Taxation in Practice** Thomas Sterner, 2017-05-15 Since the 1980s market based instruments for environmental policy have become increasingly important. Focusing on environmental taxation in practice, this volume collects key contributions on a wide range of topics including comparisons of environmental taxation schemes in different countries, political economy issues and key aspects of concrete implementation. It presents a wealth of ex ante and ex post analyses intended as a source of guidance for policy implementation and research. The volume features a full length introduction locating the literature on environmental taxation in practice in a wider context of theoretical and applied issues.

**A Behavioral Analysis of EPA's Mobile Emission Factor Model** Winston Harrington, 1998 *Distributional Effects of Environmental and Energy Policy* Don Fullerton, 2017-05-15 Many effects of environmental and energy policy are likely to disproportionately burden those with low income. First it raises the price of fossil fuel intensive products that constitute a high fraction of low income budgets like gasoline, heating fuel and electricity. Second, the handout of pollution permits to firms provides value to those who own them. Third, low income individuals may place more value on food and shelter than on improvements in environmental quality so high income individuals may get the most benefit of pollution abatement. Fourth, air quality improvements may raise the value of houses owned by landlords rather than helping renters. These effects might all hurt the poor more than the rich. This book brings together the seminal economics literature that studies whether these fears are valid and whether anything can be done about them.
