Biochemistry, Physiology, and Serology, University of Kansas, September, 1962** Charles A., Hrsg.] Leone, 1964

Plant Taxonomy Tod F. Stuessy, 2009-01-01 The field of plant taxonomy has transformed rapidly over the past fifteen years especially with regard to improvements in cladistic analysis and the use of new molecular data The second edition of this popular resource reflects these far reaching and dramatic developments with more than 3 000 new references and many new figures Synthesizing current research and trends Plant Taxonomy now provides the most up to date overview in relation to monographic biodiversity and evolutionary studies and continues to be an essential resource for students and scholars This text is divided into two parts Part 1 explains the principles of taxonomy including the importance of systematics characters concepts of categories and different approaches to biological classification Part 2 outlines the different types of data used in plant taxonomic studies with suggestions on their efficacy and modes of presentation and evaluation This section also lists the equipment and financial resources required for gathering each type of data References throughout the book illuminate the historical development of taxonomic terminology and philosophy while citations offer further study Plant Taxonomy is also a personal story of what it means to be a practicing taxonomist and to view these activities within a meaningful conceptual framework Tod F Stuessy recalls the progression of his own work and shares his belief that the most creative taxonomy is done by those who have a strong conceptual grasp of their own research **International Review of General and Experimental Zoology** William J. L. Felts, Richard J Harrison, 2013-10-22 International Review of General and Experimental Zoology Volume 2 is a collection of world literature concerning developments in general and experimental zoology This book is composed of six chapters and begins with a survey of the biochemical and serological techniques and their application in experimental taxonomy The succeeding chapters review the field of general and comparative endocrinology in lower vertebrates as well as the problems of understanding the fine structure of the synaptic cleft of presumed chemically transmitting synapses These topics are followed by discussions on structural and functional aspects of the avian lungs and air sacs the metabolic aspect of heat transfer in biological systems and the external energy transfer from the organism to the surrounding environment The final chapter focuses on the experimental studies of neurocranium morphology and growth This book will prove useful to zoologists and taxonomists *The Chemistry of Natural Products* Sam Stuart, 2013-10-22 The Chemistry of Natural Products 4 covers the proceedings of the Fourth International Symposium on the Chemistry of Natural Products This book is composed of fourteen chapters and begins with a discussion on the impact of natural product chemistry on medicine and the general methods for the construction of complex molecules Considerable chapters are devoted to the biosynthesis physico chemical properties reactions and applications of some natural products

including polysaccharides hormones ginkgolides indole and alkaloids The remaining chapters highlight the field of chemotaxonomy This book will prove useful to botanists chemists taxonomists and students *Bibliography of Agriculture*,1965 *Biochemical and Immunological Taxonomy of Animals* Christopher Amyas Wright,1974 **Advances in Comparative Physiology and Biochemistry V5** O Lowenstein,2012-12-02 Advances in Comparative Physiology and Biochemistry Volume 5 presents three papers that cover the different physiological and chemical aspects of biology from functional morphology at one end to behavior at the other end of the spectrum As always this serial publication emphasizes comparison be it within a group of related organisms or related substances or mechanisms throughout the animal kingdom The first study on the feeding and digestion in the Bivalvia examines both the feeding mechanisms and digestive processes within this class of mollusks solidly based on functional morphology and biochemistry The second study on isoenzymes multiple enzymes and phylogeny traces the evolutionary relationships between and within groups of important enzyme systems taking evidence from representatives of the whole animal kingdom The final paper on the comparative physiology of reproduction in arthropods examines the reproductive mechanisms in a whole phylum It considers patterns of sexuality germ cell formation physiology mating behavior and the nervous and hormonal factors governing reproduction **Chemical plant Taxonomy** T Swain,2012-12-02 Chemical Plant Taxonomy focuses on the classification of plants based on their chemical composition Composed of contributions of authors the text first considers the methods of plant taxonomy Folk taxonomy Linnaean and post Linnaean taxonomy Darwin and Evolutionary Taxonomy and the development of taxonomic practice are considered The book continues with discussions on the theoretical and practical aspects of the species concepts and an outline of the history of chemical taxonomy The selection also looks at the qualities of chemotaxonomy the usefulness of chemistry in plant taxonomy biosynthetic pathways and the factors affecting the production of secondary plant products The text discusses the distribution of alkanes The isolation and characterization of alkanes taxonomic applications of alkanes biogenesis of alkanes and fossil alkanes are discussed The selection highlights the chemical taxonomy of acetylenic compounds the distribution of fatty acids in plant lipids distribution of aliphatic polyols cyclitols plant glycosides and alkaloids The text is a good source of information for readers wanting to study the taxonomy of chemical plants *National Library of Medicine Current Catalog* National Library of Medicine (U.S.),1971 First multi year cumulation covers six years 1965 70 **Collecting Experiments** Bruno J. Strasser,2019-06-07 Databases have revolutionized nearly every aspect of our lives Information of all sorts is being collected on a massive scale from Google to Facebook and well beyond But as the amount of information in databases explodes we are forced to reassess our ideas about what knowledge is how it is produced to whom it belongs and who can be credited for producing it Every scientist working today draws on databases to produce scientific knowledge Databases have become more common than microscopes voltmeters and test tubes and the increasing amount of data has led to major changes in research practices and profound reflections on the proper professional roles of

data producers collectors curators and analysts Collecting Experiments traces the development and use of data collections especially in the experimental life sciences from the early twentieth century to the present It shows that the current revolution is best understood as the coming together of two older ways of knowing collecting and experimenting the museum and the laboratory Ultimately Bruno J Strasser argues that by serving as knowledge repositories as well as indispensable tools for producing new knowledge these databases function as digital museums for the twenty first century

Perspectives in Zoology Alan Boyden, 2013-10-22 Perspectives in Zoology tries to discuss in a critical way some of the aspects of biology that lack perspective The book also calls into attention the possibilities of obtaining a more correct view and challenges views that already have already been accepted by the scientific community In this thought provoking book many questions are raised and different viewpoints and their implications are considered in the areas of natural history Coverage includes the great ages of evolution the primitive evolution in the eumatozoa the morphological comparisons between homology and analogy systematic serology and its principles and the relationship of systemics evolution and phylogeny The text is recommended for students and professors that deal with biology zoology genetics and evolution who not only wish to explore and understand other approaches to popular theories in zoology but also wish to be more familiarized and delve deeper with the common yet frequently discussed and debated topics in the field *Handbook of Biochemistry* Gerald D Fasman, 2019-08-08 The section of this handbook has been dividing into two volumes the first volume contains information relating to purines pyrimidine and nucleoside oligonucleotide polynucleotides and their derivatives Both ribo and deoxyribo compounds are listed also The second volume will contain the remaining material similar to Volume 1 and material more relative to genetic and biological aspects such as enzymes involved in nucleic acid function protein synthesis linkage maps Classification and Human Evolution Sherwood L. Washburn, 2017-07-28 The names given to the variety of man like fossils known to scientists should reflect no more than scientific views of the nature of human evolution However often in the past these names have also reflected confusion regarding the basic principles of scientific nomenclature and the matter has been further complicated by the many new finds of recent decades It is the unique purpose of this book to clarify the present state of knowledge regarding the main lines of human evolution by expressing what is known and what is surmised about them in appropriate taxonomic language The papers in this volume were prepared by the world s leading authorities on the subject and were revised in the light of discussions at a remarkable conference held in Austria in 1962 under the auspices of the Wenner Gren Foundation The authors review first the meaning of taxonomic statements as such and then consider the substance of our present knowledge regarding the number and characteristics of species among living and extinct primates including man and his ancestors They also examine the relationship of behavior changes and selection pressures in evolutionary sequences Ample illustrations bibliographies and an index enhance the permanent reference value of the book which will undoubtedly prove to be among the fundamental paleoanthropological works of our time National

Library of Medicine Catalog National Library of Medicine (U.S.),1960 **NIH Library Booklist** ,1965 **Albumin: Structure, Function and Uses** Victor M. Rosenoer,Murray Oratz,Marcus A. Rothschild,2014-05-18 Albumin Structure Function and Uses reviews the many facets of serum albumin including its history and evolutionary development structure and function synthesis degradation distribution and transport and metabolic behavior The use misuse and abuse of albumin in the treatment of disease are also discussed This book is comprised of 17 chapters and begins with a commentary on how albumin is used misused and abused in the treatment of disease such as peptic ulcer and a description of the real indications for its use Concepts in albumin purification are then examined along with the amino acid sequence of serum albumin and some aspects of its structure and conformational properties Subsequent chapters explore the phylogenetics of albumin albumin binding sites clinical implications of drug albumin interaction genetics of human serum albumin and hepatic synthesis of export proteins Albumin catabolism and intracellular transport are also considered together with surgical and clinical aspects of albumin metabolism This monograph should be a useful resource for biochemists and clinicians

Advances in Microbial Physiology ,1972-07-05 *Advances in Microbial Physiology* **Chemistry in Botanical Classification: Medicine and Natural Sciences** Gerd Bendz,2013-10-14 *Medicine and Natural Sciences Chemistry in Botanical Classification* contains the proceedings of the Twenty Fifth Nobel Symposium held in Sodergarn Sweden on August 20 25 1973 The papers explore the chemical approach to plant classification and cover topics ranging from chemosystematics and applications of special classes of compounds to insects and plant chemotaxonomy Biosynthetic pathways in chemical phylogeny and some aspects of organic geochemistry are also discussed This book is comprised of 32 chapters divided into five sections The first chapter provides an overview of the chemical approach to botanical classification with special reference to the higher taxa of Magnoliophyta The reader is then introduced to chemosystematics and the construction of phylogenetic schemes as well as the use of a chemical character for the classification of living organisms The following chapters focus on The chemistry of disjunct taxa homology of biosynthetic routes and applications of special classes of compounds such as flavonoids The systematic distribution of ellagitannins in relation to the phylogeny and classification of the angiosperms is also considered The final chapter describes phytochemical and biological procedures for screening of plant materials This monograph will be of value to botanists plant taxonomists and chemists
