Singularity Theory and its Applications Mark Roberts,Ian Stewart,2006-11-14 A workshop on Singularities Bifuraction and Dynamics was held at Warwick in July 1989 as part of a year long symposium on Singularity Theory and its applications The proceedings fall into two halves Volume I mainly on connections with algebraic geometry and volume II on connections with dynamical systems theory bifurcation theory and applications in the sciences The papers are original research stimulated by the symposium and workshop All have been refereed and none will appear elsewhere The main topic of volume II is new methods for the study of bifurcations in nonlinear dynamical systems and applications of these   Singularity Theory and its Applications David Mond,James Montaldi,2006-11-14 A workshop on Singularities Bifurcation and Dynamics was held at Warwick in July 1989 as part of a year long symposium on Singularity Theory and its applications The proceedings fall into two halves Volume I mainly on connections with algebraic geometry and volume II on connections with dynamical systems theory bifurcation theory and applications in the sciences The papers are orginal research stimulated by the symposium and workshops All have been refereed and none will appear elsewhere The main topic deformation theory is represented by several papers on descriptions of the bases of versal deformations and several more on descriptions of the generic fibres Other topics include stratifications and applications to differential geometry   **Coding Theory and Algebraic Geometry** Henning Stichtenoth,Michael A. Sprindzuk,2006-11-15 The author had initiated a revision and translation of Classical Diophantine Equations prior to his death Given the rapid advances in transcendence theory and diophantine approximation over recent years one might fear that the present work originally published in Russian in 1982 is mostly superseded That is not so A certain amount of updating had been prepared by the author himself before his untimely death Some further revision was prepared by close colleagues The first seven chapters provide a detailed virtually exhaustive discussion of the theory of lower bounds for linear forms in the logarithms of algebraic numbers and its applications to obtaining upper bounds for solutions to the eponymous classical diophantine equations The detail may seem stark the author fears that the reader may react much as does the tourist on first seeing the centre Pompidou notwithstanding that Sprind zuk maintainsa pleasant and chatty approach full of wise and interesting remarks His emphases well warrant now that the book appears in English close studyand emulation In particular those emphases allow him to devote the eighth chapter to an analysis of the interrelationship of the class number of algebraic number fields involved and the bounds on the heights of thesolutions of the diophantine equations Those ideas warrant further development The final chapter deals with effective aspects of the Hilbert Irreducibility Theorem harkening back to earlier work of the author There is no other congenial entry point to the ideas of the last two chapters in the literature   Lie Algebras and Lie Groups Jean-Pierre Serre,2009-02-07 This book reproduces J P Serre s 1964 Harvard lectures The aim is to introduce the reader to the Lie dictionary Lie algebras and Lie groups Special features of the presentation are its emphasis on formal groups in the Lie group part and the use of analytic manifolds on p adic fields Some knowledge of algebra and calculus is required of the reader but the text is easily accessible to graduate students and to mathematicians at large   Singularity Theory Bill Bruce,D.    Deformations of Surface Singularities Andras Némethi,Agnes Szilárd,2014-01-24 The present publication contains a special collection of research and review articles on deformations of surface singularities that put together serve as an introductory survey of results and methods of the theory as well as open problems and examples The aim is to collect material that will help mathematicians already working or wishing to work in this area to deepen their insight and eliminate the technical barriers in this learning process Additionally we introduce some material which emphasizes the newly found relationship with the theory of Stein fillings and symplectic geometry This links two main theories of mathematics low

dimensional topology and algebraic geometry The theory of normal surface singularities is a distinguished part of analytic or algebraic geometry with several important results its own technical machinery and several open problems Recently several connections were established with low dimensional topology symplectic geometry and theory of Stein fillings This created an intense mathematical activity with spectacular bridges between the two areas The theory of deformation of singularities is the key object in these connections *Delay Differential Equations and Applications* O. Arino,M.L. Hbid,E. Ait Dads,2007-01-07 This book groups material that was used for the Marrakech 2002 School on Delay Di erential Equations and Applications The school was held from September 9 21 2002 at the Semlalia College of Sciences of the Cadi Ayyad University Marrakech Morocco 47 participants and 15 instructors originating from 21 countries attended the school Fin cial limitations only allowed support for part of the people from Africa andAsiawhohadexpressedtheirinterestintheschoolandhadhopedto come Theschoolwassupportedby nancementsfromNATO ASI Nato advanced School the International Centre of Pure and Applied Mat matics CIMPA Nice France and Cadi Ayyad University The activity of the school consisted in courses plenary lectures 3 and communi tions 9 from Monday through Friday 8 30 am to 6 30 pm Courses were divided into units of 45mn duration taught by block of two units with a short 5mn break between two units within a block and a 25mn break between two blocks The school was intended for mathematicians willing to acquire some familiarity with delay di erential equations or enhance their knowledge on this subject The aim was indeed to extend the basic set of knowledge including ordinary di erential equations and semilinearevolutionequations suchasforexamplethedi usion reaction equations arising in morphogenesis or the Belouzov Zhabotinsky ch ical reaction and the classic approach for the resolution of these eq tions by perturbation to equations having in addition terms involving past values of the solution *Bifurcation and Symmetry* BÖHMER,ALLGOWER,GOLUBITSKY,2013-03-08 Symmetry is a property which occurs throughout nature and it is therefore natural that symmetry should be considered when attempting to model nature In many cases these models are also nonlinear and it is the study of nonlinear symmetric models that has been the basis of much recent work Although systematic studies of nonlinear problems may be traced back at least to the pioneering contributions of Poincare this remains an area with challenging problems for mathematicians and scientists Phenomena whose models exhibit both symmetry and nonlinearity lead to problems which are challenging and rich in complexity beauty and utility In recent years the tools provided by group theory and representation theory have proven to be highly effective in treating nonlinear problems involving symmetry By these means highly complex situations may be decomposed into a number of simpler ones which are already understood or are at least easier to handle In the realm of numerical approximations the systematic exploitation of symmetry via group repre sentation theory is even more recent In the hope of stimulating interaction and acquaintance with results and problems in the various fields of applications bifurcation theory and numerical analysis we organized the conference and workshop Bifurcation and Symmetry Cross Influences between Mathematics and Applications during June 2 7 8 14 1991 at the Philipps
