Tau Zero:

Tau Zero Poul Anderson, 2018-09-18 This Hugo Award finalist justifiably regarded as a classic SF Reviews net is the tale of an epic space voyage where time dilation goes horribly wrong Aboard the spacecraft Leonora Christine fifty crewmembers half men and half women have embarked on a journey of discovery like no other to a planet thirty light years away Since their ship is not capable of traveling faster than light the crew will be subject to the effects of time dilation and relativity They will age five years on board the ship before reaching their destination but thirty three years will pass on Earth Experienced scientists and researchers they have come to terms with the time conditions of their space travel Until the Leonora Christine passes through an uncharted nebula which damages the engine making it impossible to decelerate the ship on the second half of their trip To survive the crewmembers have no choice but to bypass their destination and continue to accelerate toward the speed of light But how will they keep hope alive and maintain order as they hurtle deeper into space with time passing more and more rapidly and their ultimate fate unknown With its combination of mind blowing hard science and compelling human drama *Tau Zero* is the ultimate hard science novel Mike Resnick **Tau Zero** Paul

Anderson, Poul, 2009 The epic voyage of the spacecraft Leonora Christine will take her and her fifty strong crew to a planet some thirty light years distant But because the ship will accelerate to close to the speed of light for those on board subjective time will slow and the journey will be of only a few years duration Then a buffeting by an interstellar dustcloud changes everything The ship's deceleration system is damaged irreparably and soon she is gaining velocity When she attains light speed *tau zero* itself the disparity between ship time and external time becomes almost impossibly great Eons and galaxies hurtle by and the crew of the Leonora Christine speeds into the unknown *The Politics of Earthquake Prediction* Richard

S. Olson, Bruno Podesta, Joanne M. Nigg, 2014-07-14 *The Politics of Earthquake Prediction* is a suspenseful account of what happens when scientists predict an enormous earthquake for a specific day an earthquake that did not in this instance happen but which if it had would have been one of the most destructive of our century Working in a field where uncertainty abounds Dr Brian Brady of the U S Bureau of Mines and Dr William Spence of the U S Geological Survey gradually came to the conclusion that a catastrophic quake would occur on June 28 1981 off the coast of central Peru near the great population center of Lima Callao Their research was based on a theory challenging scientific notions widely accepted in the seismological establishment This book is a fast paced but thorough and sensitive description of how this scientific dispute became a political controversy The work portrays in detail the struggles of scientists and government officials in both the United States and Peru attempting to do the right thing as the target date approached The authors emphasize the political economic and moral dilemmas of earthquake prediction the impact of the media and the potentially drastic consequences of ignoring a valid prediction Originally published in 1989 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press

These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

Call of the Cosmic Wild. Relativistic Rockets for the New Millennium. James Essig, 2016-04-13 This book includes numerous calculations for the many specific examples included within I have included the many calculated examples to provide the reader with immediate justifications for the numerous concepts described This was not done to belittle or talk down to the reader but rather to give the reader a clear sense of the plausibility for the propulsion methods and performance capabilities thereof Interstellar travel at the many specific highly relativistic velocities contemplated in this book and in some cases extreme vehicle masses is still a very controversial subject but nonetheless a highly mathematicalized and intelligible subject My hope and intention is to thus clearly inspire and show the reader the plausibility of the concepts by providing the reader with proper evidence through his or her simple inspection of the formulas and values included in the computations Some speculative physics is included which is based on commonly presented theoretical constructs

Chemical Reaction Engineering Tapio Salmi, Johan Wärnå, José Rafael Hernández Carucci, César A. de Araújo Filho, 2020-03-23 This book illustrates how models of chemical reactors are built up in a systematic manner step by step The authors also outline how the numerical solution algorithms for reactor models are selected as well as how computer codes are written for numerical performance with a focus on MATLAB and Fortran Examples solved in MATLAB and simulations performed in Fortran are included for demonstration purposes

Centauri Dreams Paul Gilster, 2013-04-18 I wrote this book because I wanted to learn more about interstellar flight Not the Star Trek notion of tearing around the Galaxy in a huge spaceship that was obviously beyond existing technology but a more realistic mission In 1989 I had videotaped Voyager 2's encounter with Neptune and watched the drama of robotic exploration over and over again I started to wonder whether we could do something similar with Alpha Centauri the nearest star to the Sun Everyone seemed to agree that manned flight to the stars was out of the question if not permanently then for the indefinitely foreseeable future But surely we could do something with robotics And if we could figure out a theoretical way to do it how far were we from the actual technology that would make it happen In other words what was the state of our interstellar technology today those concepts and systems that might translate into a Voyager to the stars Finding answers meant talking to people inside and outside of NASA I was surprised to learn that there is a large literature of interstellar flight Nobody knows for sure how to propel a spacecraft fast enough to

make the interstellar crossing within a time scale that would fit the conventional idea of a mission but there are candidate systems that are under active investigation Some of this effort begins with small systems that we ll use near the Earth and later hope to extend to deep space missions

Nonlinear Differential Equations in Ordered Spaces S. Carl,Seppo Heikkilä,2000-06-14 Extremality results proved in this Monograph for an abstract operator equation provide the theoretical framework for developing new methods that allow the treatment of a variety of discontinuous initial and boundary value problems for both ordinary and partial differential equations in explicit and implicit forms By means of these extremality results the authors prove the existence of extremal solutions between appropriate upper and lower solutions of first and second order discontinuous implicit and explicit ordinary and functional differential equations They then study the dependence of these extremal solutions on the data The authors begin by developing an existence theory for an abstract operator equation in ordered spaces and offer new tools for dealing with different kinds of discontinuous implicit and explicit differential equation problems They present a unified approach to the existence of extremal solutions of quasilinear elliptic and parabolic problems and extend the upper and lower solution method to elliptic and parabolic inclusion of hemivariation type using variational and nonvariational methods Nonlinear Differential Equations in Ordered Spaces includes research that appears for the first time in book form and is designed as a source book for pure and applied mathematicians Its self contained presentation along with numerous worked examples and complete detailed proofs also make it accessible to researchers in engineering as well as advanced students in these fields

The Fascination with Unknown Time Sibylle Baumbach,Lena Henningsen,Klaus Oschema,2017-11-01 This volume explores unknown time as a cultural phenomenon approaching past futures unknown presents and future pasts through a broad range of different disciplines media and contexts As a phenomenon that is both elusive and fundamentally inaccessible time is a key object of fascination Throughout the ages different cultures have been deeply engaged in various attempts to fill or make time by developing strategies to familiarize unknown time and to materialize and control past present or future time Arguing for the perennial interest in time especially in the unknown and unattainable dimension of the future the contributions explore premodern ideas about eschatology and secular future historical configurations of the perception of time and acceleration in fin de siècle Germany and contemporary Lagos the formation of deep time and timelessness in paleontology and ethnographic museums and the representation of time past present and future alike in music film and science fiction

Discourses and Narrations in the Biosciences Brian Hurwitz,Paola Spinozzi,2011 Discourses and Narrations in the Biosciences investigates the forms of writing in which scientific claims are formulated and announced Argumentative strategies compositional rules and figurative expressions in communication and narrativization of scientific knowledge are the focus of interdisciplinary contributions by humanities and science scholars The first part of the book dedicated to Rhetorical and Epistemological Aspects of Science Writing addresses how scientific pursuits and methods feed into multi level texts that generate responses within science

society and culture The second part entitled Bioscientific Discourses and Narrations examines popularisations and fictionalizations of science in relation to diversity deviancy ageing illness reproduction the evolution of humankind mathematical models of biomedical systems and the myth of the heroic scientist Assessing the narrative impetus and command of literary and meta discursive strategies shown by contemporary science writers enhances understanding of the methods and conventions through which the biosciences produce knowledge Bryce DeWitt's Lectures on Gravitation Bryce DeWitt,2011-02-23 Bryce DeWitt a student of Nobel Laureate Julian Schwinger was himself one of the towering figures in 20th century physics particularly renowned for his seminal contributions to quantum field theory numerical relativity and quantum gravity In late 1971 DeWitt gave a course on gravitation at Stanford University leaving almost 400 pages of detailed handwritten notes Written with clarity and authority and edited by his former student Steven Christensen these timeless lecture notes containing material or expositions not found in any other textbooks are a gem to be discovered or re discovered by anyone seriously interested in the study of gravitational physics **All the Wonder that Would Be** Stephen Webb,2017-05-03 It has been argued that science fiction SF gives a kind of weather forecast not the telling of a fortune but rather the rough feeling of what the future might be like The intention in this book is to consider some of these bygone forecasts made by SF and to use this as a prism through which to view current developments in science and technology In each of the ten main chapters dealing in turn with antigravity space travel aliens time travel the nature of reality invisibility robots means of transportation augmentation of the human body and last but not least mad scientists common assumptions once made by the SF community about how the future would turn out are compared with our modern understanding of various scientific phenomena and in some cases with the industrial scaling of computational and technological breakthroughs A further intention is to explain how the predictions and expectations of SF were rooted in the scientific orthodoxy of their day and use this to explore how our scientific understanding of various topics has developed over time as well as to demonstrate how the ideas popularized in SF subsequently influenced working scientists Since gaining a BSc in physics from the University of Bristol and a PhD in theoretical physics from the University of Manchester Stephen Webb has worked in a variety of universities in the UK He is a regular contributor to the Yearbook of Astronomy series and has published an undergraduate textbook on distance determination in astronomy and cosmology as well as several popular science books War of the Gods Poul Anderson,2020-10-06 Readers bored with Tolkien clone fantasies will be enthralled by the intricately detailed world and characters Anderson brings to life here Publishers Weekly starred review The Grand Master of Science Fiction delivers a Dark Age saga based on Old Scandinavian mythology and the exploits of the legendary Danish King Hadding A brilliantly accomplished yarn Kirkus Reviews In a scheme arranged by the god Odin Hadding is born to King Gram Skjoldung of Denmark but is sent to be raised by giants for his own safety After his father is murdered Hadding must claim his destiny Prey to the follies of humans and gods he rises to the challenges of war fate and love in a mythic adventure

A Traveler's Guide to the Stars Les Johnson,2024-06-04 The discovery in the last few decades of thousands of exoplanets orbiting nearby stars has made the age old dream of interstellar travel a newly urgent scientific question Initiatives like NASA s 100 Year Starship and the billionaire funded Breakthrough Starshot are now investigating and developing new technologies that could one day enable humans to explore perhaps even colonize distant solar systems This short accessible book brings readers to the forefront of this new frontier laying out both the challenges to be navigated and the latest thinking and scientific developments that could allow us to overcome them NASA scientist Les Johnson begins by surveying the vast hostile landscape between stars we ll need to traverse an extremely cold mysterious expanse rife with harsh radiation and cosmic dust He describes our first sallies into this sphere with forerunners like the Voyager craft now well on their way into the interstellar medium and new extrasolar probes currently being planned that will venture farther beyond our solar system and launch within our lifetimes He next considers who our interstellar explorers will be first robots followed by humans and what each will entail before delving into the mind boggling science of how one would actually propel an interstellar starship Johnson explains the most promising approaches from antimatter powered rockets to the light filled sails scientists like himself are piloting now and discusses other design challenges to be overcome like power and communications The book closes with a chapter exploring the real science of sci fi and pop culture fixtures like warp drives and wormholes and a conclusion that considers what it will take as a society to realize our interstellar future
