Narratives of Doctoral Studies in Science Education Shirley Simon, Christina Ottander, Ilka Parchmann, 2015-08-20 This book explores the ways in which small scale research studies arise from issues of practice and how they are conceptualised theorised and implemented using a variety of methodological approaches and frameworks The narratives written by thirteen doctoral students tell real stories of projects and challenges that researchers face when making the transition from educational practitioner to researcher Considering case studies from the UK Sweden and Germany chapters seek to investigate and inform others about how doctoral students solved individual and typical problems linking practice and research Each methodological journey highlights and illustrates the iterative and cyclic nature of research and the normality of the process of going back and forth between data and theory making changes of direction as research proceeds The book includes frameworks for combining research theory and practice drawing from the methodological decisions and conclusions each contributor made to develop their own practice oriented research *Narratives of Doctoral Studies in Science Education* will be key reading for researchers and academics in the fields of educational research science education research methods and higher education as well as masters and doctoral students undertaking their own research projects *Formative Assessment and Science Education* Nigel Bell, B. Cowie, 2005-12-21 This work documents the findings of a research project which investigated the ways in which teachers and students used formative assessment to improve the teaching and learning of science in some New Zealand classrooms It will be of interest to graduate students and researchers as well as teacher educators curriculum developers and assessment specialists *Teachers Creating Context-Based Learning Environments in Science* R. Taconis, den Brok P., 2016-10-26 Context based science education has led to the transformation of science

education in countries all over the world with changes also visible in learning environments and how these are being shaped. These changes involve authentic problems on research and design new types of interactions within communities of practice, new content areas and also new challenges for teachers in teaching, motivating, scaffolding and assessing their students among other things. This book focuses on context based science education and its resulting changes in the perspective of research on learning environments. It also focuses on the implications for the teachers and the professional development of their competencies and beliefs. The book consists of eleven chapters by experts in various themes surrounding learning environments research and science education preceded by and concluded with a chapter with reflections on context based learning environments in science by the editors of this book. The conclusion they draw is that professional development of science teachers may be the most important and the most difficult part of the process of teachers creating context based learning environments in science as is the focus in the title of this book.

Future-Proofing Teacher Education Sarah Gravett, Nadine Petersen, 2022-07-22. This book presents a variety of perspectives on teacher education for a fast changing world. It deepens the discourse on teacher education and specifically considers teacher education in light of the technological advancements of the Fourth Industrial Revolution as well as education in times of uncertainty. Drawing on examples from South Africa and showcasing international authors, the book offers a nuanced evaluation of how teacher education might adapt for the future. It explores the tension between the perennial in education and the unpredictability of the future and asks the question of how teacher education can contend with these tensions and how teachers can prepare for unexpected circumstances. Chapters draw on the science of learning and foreground lessons learned from the abrupt move of teacher education online due to the COVID 19 pandemic. The book invokes these themes to reimagine and strengthen teacher education for the future, presenting reports on research, case studies and theoretical stances. *Future Proofing Teacher Education* explores what is relevant in teacher education in the 21st century and will be a key reading for researchers, academics and post graduate students of teacher education, technology in education and digital education.

Issues and Challenges in Science Education Research Kim Chwee Daniel Tan, Mijung Kim, 2012-04-27. In contemporary society, science constitutes a significant part of human life in that it impacts on how people experience and understand the world and themselves. The rapid advances in science and technology, newly established societal and cultural norms and values and changes in the climate and environment as well as the depletion of natural resources all greatly impact the lives of children and youths and hence their ways of learning, viewing the world, experiencing phenomena around them and interacting with others. These changes challenge science educators to rethink the epistemology and pedagogy in science classrooms today as the practice of science education needs to be proactive and relevant to students and prepare them for life in the present and in the future. Featuring contributions from highly experienced and celebrated science educators as well as research perspectives from Europe, the USA, Asia and Australia, this book addresses theoretical and practical examples in science.

Modelling-based Teaching in Science Education John K.

Gilbert,Rosária Justi,2016-05-30 This book argues that modelling should be a component of all school curricula that aspire to provide authentic science education for all The literature on modelling is reviewed and a model of modelling is proposed The conditions for the successful implementation of the model of modelling in classrooms are explored and illustrated from practical experience The roles of argumentation visualisation and analogical reasoning in successful modelling based teaching are reviewed The contribution of such teaching to both the learning of key scientific concepts and an understanding of the nature of science are established Approaches to the design of curricula that facilitate the progressive grasp of the knowledge and skills entailed in modelling are outlined Recognising that the approach will both represent a substantial change from the content transmission approach to science teaching and be in accordance with current best practice in science education the design of suitable approaches to teacher education are discussed Finally the challenges that modelling based education pose to science education researchers advanced students of science education and curriculum design teacher educators public examiners and textbook designers are all outlined

Sustaining

Mobile Learning Wan Ng,Therese M. Cumming,2015-07-16 Mobile technologies are one of the fastest growing areas of technology in education For learners they offer an appealing opportunity to transcend teacher defined knowledge and

approaches by being able to access multiple alternative sources of information anytime and anywhere While the pace of engagement with and research into the educational applications of mobile technologies has picked up dramatically in the last decade there is no consolidated view of how to sustain the practices or opportunities that are being explored Sustainability is a complex but crucial issue in mobile learning as educational institutions are usually required to make substantial investments in mobile devices and associated technologies time and training to initiate mobile learning programs The complexity of sustainable mobile learning programs is further exacerbated by the fast pace of change of digital technologies where with every change new possibilities are opened up and investments required In addition educators are still attempting to reconcile institutions of formal education with informal mobile learning The book addresses these issues with a particular focus on exploring the challenges surrounding the sustainability of mobile learning in K 12 and higher education investigating the importance of sustaining mobile learning for diverse populations of students globally discussing theoretical models for the sustainability of mobile learning providing the reader with strategies for sustaining mobile learning Presenting new research alongside theoretical models and ideas for practice the book will appeal to researchers academics and postgraduate students in the fields of education and mobile learning as well as those working in teacher education
