Policy Space Index: Short-Term Response to a Catastrophic Event José Ferrer,Alexei Kireyev,Mr. Alexei P Kireyev,2022-06-17 What policy space does a country have for a short term response to a catastrophic event To quantify this space the paper proposes a policy space index The index combines a quantitative albeit relatively limited and narrow fiscal space concept with the indicators of nominal monetary space and reserve space Each nominal policy space indicator is then adjusted for individual country s institutional features such as the status of its currency income group access to capital markets debt distress level and the exchange rate regime The final policy space index is derived as a composite of the three nominal policy space indicators each adjusted for five institutional features This index is different from the approach to measure fiscal space at the IMF and requires more work before it can be used operationally The proposed index allows measuring the overall policy space in each country directly in percent of GDP By way of illustration the paper applies the index to the Covid 19 crisis

Short-term Visual Information Forgetting (PLE: Memory) A.H.C. van der Heijden,2014-05-09 When this title was originally published in 1981 the information processing approach to perception and memory was dominant in experimental psychology and the research reported here had major implications for future development After exploring the shortcomings of earlier work in this field the author develops a new model which he shows to be capable of accounting for a variety of experimental data connected with human information processing visual perception and attention The central theme which is discussed is how we select relevant and discard irrelevant information The basic assumption is that all incoming information is identified that is it reaches and activates the appropriate lexical entries A piece of identified information is described as a unit consisting of three distinguishable codes a visual code a lexical or semantic code and a motor or action code Identified information decays fast so selective attention operates by selecting those units which have to be saved from this rapid decay In a sense therefore the human information processor is described as struggling against forgetting

Yu, Xinming Qiu, 2018-01-23 Fundamental guidance including concepts models and methodology for better understanding the dynamic behavior of materials and for designing for objects and structures under impact or intensive dynamic loading This book introduces readers to the dynamic response of structures with important emphasis on the material behavior under dynamic loadings It utilizes theoretical modelling and analytical methods in order to provide readers with insight into the various phenomena The content of the book is an introduction to the fundamental aspects which underpin many important industrial areas These areas include the safety of various transportation systems and a range of different structures when subjected to various impact and dynamic loadings including terrorist attacks Presented in three parts Stress Waves in Solids Dynamic Behaviors of Materials Under High Strain Rate and Dynamic Response of Structures to Impact and Pulse Loading Introduction to Impact Dynamics covers elastic waves rate dependent behaviors of materials effects of tensile force inertial effects and more The book also features numerous case studies to aid in facilitating learning The strength of the book is its clarity balanced coverage and practical examples which allow students to learn the overall knowledge of impact dynamics in a limited time whilst directing them to explore more advanced technical knowledge and skills Considers both the dynamic behavior of materials and stress waves and the dynamic structural response and energy absorption emphasizing the interaction between material behavior and the structural response Provides a comprehensive description of the phenomenon of impact of structures containing both fundamental issues of wave propagation and constitutive relation of materials and the dynamic response of structures under impact loads Based on the authors research and teaching experience as well as updated developments in the field Introduction to Impact Dynamics is the perfect textbook for graduate and postgraduate students and will work as a reference for engineers in the fields of solid mechanics automotive design aerospace mechanical nuclear marine and defense **Beta-Blockers in the Elderly** E. Lang, F. Sörgel, L. Blaha, 2012-12-06 In conjunction with the Twelfth International Congress of Gerontology the Carl Korth Institute for Cardiovascular Research organized an international symposium on Beta Blockers in the Elderly It was the intention of the Scientific Committee that during this symposium we would discuss the specific problems and therapeutic implications arising when elderly people have to be treated with beta blocking agents Special emphasis was placed on the side effects and the age dependent features of beta blocker therapy Beta blockers have become established in the treatment of both cardiovascular diseases and neuropsychiatric disorders Their effectiveness in patients suffering from coronary heart disease hypertension and hyperkinetic cardiac syndromes has long been proven The development of new selectively active beta blockers has substantially reduced the number of possible side effects thus enhancing therapeutic safety Because side effects cannot be eliminated however beta blockers have been introduced only hesitantly into treatment of the elderly This book is the first wide ranging survey of the use of beta blockers in elderly patients The articles contained herei written by pharmacologists

cardiologists sports physicians neurologists psychiatrists and ophthalmologists show that advanced age alone does not contraindicate the use of beta blockers and sympatholytic substances Also provided are guidelines for examination and determination of indications in the elderly Both the symposium and the publication of this volume have been kindly supported by Astra Chemicals West Germany

Mind as Machine Margaret A. Boden, 2006 Cognitive science is among the most fascinating intellectual achievements of the modern era The quest to understand the mind is an ancient one But modern science has offered new insights and techniques that have revolutionized this enquiry Oxford University Press now presents a masterly history of the field told by one of its most eminent practitioners Psychology is the thematic heart of cognitive science which aims to understand human and animal minds But its core theoretical ideas are drawn from cybernetics and artificial intelligence and many cognitive scientists try to build functioning models of how the mind works In that sense Margaret Boden suggests its key insight is that mind is a very special machine Because the mind has many different aspects the field is highly interdisciplinary It integrates psychology not only with cybernetics AI but also with neuroscience and clinical neurology with the philosophy of mind language and logic with linguistic work on grammar semantics and communication with anthropological studies of cultures and with biological and A Life research on animal behaviour evolution and life itself Each of these disciplines in its own way asks what the mind is what it does how it works how it develops and how it is even possible Boden traces the key questions back to Descartes s revolutionary writings and to the ideas of his followers and his radical critics through the eighteenth and nineteenth centuries Her story shows how controversies in the development of experimental physiology neurophysiology psychology evolutionary biology embryology and logic are still relevant today Then she guides the reader through the complex interlinked paths along which the study of mind developed in the twentieth century Cognitive science covers all mental phenomena not just cognition knowledge but also emotion personality psychopathology social communication religion motor action and consciousness In each area Boden introduces the key ideas and researchers and discusses those philosophical critics who see cognitive science as fundamentally misguided And she sketches the waves of resistance and acceptance on the part of the media and general public showing how these have affected the development of the field No one else could tell this story as Boden can she has been a member of the cognitive science community since the late 1950s and has known many of its key figures personally Her narrative is written in a lively swift moving style enriched by the personal touch of someone who knows the story at first hand Her history looks forward as well as back besides asking how state of the art research compares with the hopes of the early pioneers she identifies the most promising current work Mind as Machine will be a rich resource for anyone working on the mind in any academic discipline who wants to know how our understanding of mental capacities has advanced over the years
