GeoSpatial Visual Analytics Raffaele de Amicis, R. Stojanovic, Giuseppe Conti, 2009-07-11

Access distribution and processing of Geographic Information GI are basic preconditions to support strategic environmental decision making. The heterogeneity of information on the environment today available is driving a wide number of initiatives on both sides of the Atlantic all advocating both the strategic role of proper management and processing of environment related data as well as the importance of harmonized IT infrastructures designed to better monitor and manage the environment. The extremely wide range of often multidimensional environmental information made available at the global scale poses a great challenge to technologists and scientists to find extremely sophisticated yet effective ways to provide access to relevant data patterns within such a vast and highly dynamic information flow. In the past years the domain of 3D scientific visualization has developed several solutions designed for operators requiring to access results of a simulation through the use of 3D visualization that could support the understanding of an evolving phenomenon. However 3D data visualization alone does not provide model and hypothesis making neither it provide tools to validate results. In order to overcome this shortcoming in recent years scientists have developed a discipline that combines the benefits of data mining and information visualization which is often referred to as Visual Analytics VA.

Guidelines for Surveying Soil and Land Resources NJ McKenzie, MJ Grundy, R Webster, AJ Ringrose-Voase, 2008-04-07

Guidelines for Surveying Soil and Land Resources promotes the development and implementation of consistent methods and standards for conducting soil and land resource surveys in Australia. These surveys are primarily field operations that aim to identify describe map and evaluate the various kinds of soil or land resources in specific areas. The advent of geographic information systems global positioning systems airborne gamma radiometric remote sensing digital terrain analysis simulation modelling efficient statistical analysis and internet based delivery of information has dramatically changed the scene in the past two decades. As successor to the Australian Soil and Land Survey Handbook Guidelines for Conducting Surveys this authoritative guide incorporates these new methods and techniques for supporting natural resource management. Soil and land resource surveyors engineering and environmental consultants commissioners of surveys and funding agencies will benefit from the practical information provided on how best to use the new technologies that have been developed as will professionals in the spatial sciences such as geomorphology ecology and hydrology.

Geographic Information Science and Mountain Geomorphology Michael Bishop, John F. Schroder, 2004-06-30 From the reviews Bishop and Schroder both Univ of Nebraska at Omaha have brought together an impressive group of practitioners in the relatively new application of geographic information science to mountain geomorphology In doing so they have produced valuable first overall coverage of a high tech approach to mountain three dimensional research More than 40 contributing authors discuss a wide range of related aspects The book is well bound and well produced each chapter provides an extensive source of references The numerous line drawings are clearly reproduced although the mediocre quality of photographic reproduction limits the value of air photographs and satellite images As is characteristic of many edited collections there is some variation in chapter quality Some of the writing is so dense that it requires minute concentration one chapter for instance has 14 pages of references from a total of 43 pages Nevertheless this is a vital compendium for a rapidly expanding field of research Summing Up Recommended Upper division undergraduates through professionals J D Ives Choice March 2005
