However, most textbooks on highway engineering are based on experience from industrialized countries with temperate climates and deal only with specific problems. *Road Engineering for Development*, published as *Highway and Traffic Engineering in Developing Countries* in its first edition, provides a comprehensive description of the planning, design, construction, and maintenance of roads in developing countries. It covers a wide range of technical and non-technical problems that may confront road engineers working in this area. The technical content of the book has been fully updated and current development issues are focused on. Designed as a fundamental text for civil engineering students, this book also offers a broad practical view of the subject for practising engineers. It has been written with the assistance of a number of world-renowned specialist professional engineers with many years' experience in Africa, the Middle East, Asia, and Central America.
