Stability Theory And Related Topics In Dynamical Systems K Shiraiwa, G Ikegami, 1989-09-01 Stability Theory and Related Topics in Dynamical Systems Kenichi Shiraiwa, 1989-01-01 *Stability theory and related topics in dynamical systems : held at the Department of Mathematics, Nagoya University in Japan from October 17-19, 1988* Conference of Stability Theory and related topics in Dynamical Systems (1988 : Nagoya University), 1989 **Dynamical Systems** Rafael Labarca, R Bamon, L Lewowicz, J Palis, 1993-02-22 In at least five countries in Latin America high level research in the field is taking place To stimulate this development both at home and abroad Chilean mathematicians have been promoting international meetings like the III International School of Dynamical Systems which took place at the Universidad de Santiago de Chile Santiago in 1990 A number of distinguished mathematicians were present at the meeting side by side with younger people interested in the subject Several of the participants submitted original contributions to these proceedings of the school The topics of the papers are central to dynamics ergodic theory real and complex foliations fractal dimensions polynomial vector fields hyperbolicity and expansive maps Notes on the ergodic theory of plane billiards are also included This book will be of particular interest to researchers and graduate students working in mathematics particularly in ordinary differential equations bifurcation theory and dynamical systems Also those working in mathematical physics and physics

Dynamical Systems And Related Topics - Proceedings Of The International Conference K Shiraiwa, 1991-11-29 This volume contains the proceedings of a satellite conference of the 1990 International Congress of Mathematicians The main topics presented are mathematical theory of dynamical systems complex dynamical systems ergodic theory chaos and applications **Bifurcation Theory and Methods of Dynamical Systems** Dingjun Luo, 1997 Dynamical bifurcation theory is concerned with the changes that occur in the global structure of dynamical systems as parameters are varied This book makes recent research in bifurcation theory of dynamical systems accessible to researchers interested in this subject In particular the relevant results obtained by Chinese mathematicians are introduced as well as some of the works of the authors which may not be widely known The focus is on the analytic approach to the theory and methods of bifurcations The book prepares graduate students for further study in this area and it serves as a ready reference for researchers in nonlinear sciences and applied mathematics **Some Problems On The Theory Of Dynamical Systems In Applied Sciences - Proceedings Of The Symposium** H Kawakami, 1991-07-30 **Geometry And Analysis In Dynamical Systems - Proceedings Of The Rims Conference** H Ito, 1994-10-10 Fuzzy logic has found applications in an incredibly wide range of areas in the relatively short time since its conception It was invented by Lotfi Zadeh a leading systems expert so it is perhaps not surprising that system theory is one of the areas in which fuzzy logic has made a profound impact Fuzzy logic combined with the paradigm of computing with words allows the use and manipulation of human knowledge and reasoning in the modeling and control of dynamical systems This monograph presents new approaches to the construction of fuzzy models

and to the design of fuzzy controllers The emphasis is on developing methods that allow systematic design on the one hand and mathematical analysis of the resulting system on the other In particular the methods described allow rigorous analysis of the stability and robustness of the systems which are crucial issues in control theory The first theme of the book is a new approach to the systematic design and analysis of fuzzy controllers given linguistic information concerning the plant and the control objective The new approach fuzzy Lyapunov synthesis is a computing with words version of the well known classical Lyapunov synthesis method The second theme of the book is to show that fuzzy controllers are in fact solutions of a nonlinear optimal control problem The authors formulate a novel nonlinear optimal control problem consisting of a new state space model referred to as the hyperbolic state space model and a new cost functional and show that its solution is a fuzzy controller This leads to a new framework for fuzzy modeling and control that combines the advantages of the fuzzy world such as linguistic interpretability and of classical optimal control theory such as guaranteed stability and robustness

Qualitative Theory of Dynamical Systems Dingjun Luo, Libang Teng, 1993 This book deals with the global qualitative behavior of flows and diffeomorphisms It presents a systematic study of the fundamental theory and method of dynamical systems from local behavior near a critical fixed point or periodic orbit to the global such as global structural stability bifurcations and chaos It emphasizes the global non hyperbolicity and introduces some new results obtained by Chinese mathematicians which may not be widely known
