

The Art of Tensegrity

Kenneth Snelson

(Submitted on 25/10/2011, Reception of revised paper 19/03/2012, Accepted on 15/04/2012)

When Professor Motro invited me to contribute something for a special tensegrity issue of the Journal I was not sure what I would be able to write that might interest architects and engineers. As an artist I work directly from small scale models, quite different from the way other professions analyze tensegrity structures mathematically. My large works are required only to stand up by themselves and survive out of doors which they have done extremely well. "Easy Landing" on Baltimore Maryland's Inner Harbor (Fig. 1) and "Free Ride Home" at Storm King Art Center have stood without need of repair for more than thirty-five years. Many more of my sculptures can be seen at: www.kennethsnelson.net

Because so many papers have been written about tensegrity's performance and its proposed uses what I can add is the history of early discoveries; to relate some of what I learned for the first time over a half-a-century ago.

I want to be clear that I am writing about endoskeletal floating-compression structures not hybrids that include bicycle wheels, spider webs and WWI aircraft construction. A Google "tensegrity" search turns up nearly a half-million entries, many of which have nothing to do with discontinuous compression, continuous tension, structures.

The tensegrity story is likely to begin with the question who discovered what and when. In 1996, Volume 11 Nos. 1 & 2 of this Journal, the different views of Buckminster Fuller, David George Emmerich and Kenneth Snelson were thoroughly debated. I told of Mr. Fuller's 1959 New York Museum of Modern Art exhibition when he finally credited me for discovering the tensegrity principle.

That local public acknowledgment offered me the freedom to go back to where I had begun and to explore whatever might still be left to discover about tensegrity. Mr. Fuller had always concentrated on spheres based on the geometry of his geodesic dome. His audiences saw models and pictures of the spheres as well as his "mast" adapted from my original X-Piece. Though my 1948 plywood and monofil sculpture (Fig 2) had given birth to "tensegrity", Mr. Fuller chose not to describe it in his lectures or in his writing. Most remarkably, none of his students in schools where he taught had discovered it on their
